PART I

THE NATIONAL SYSTEM AND ENVIRONMENT
When you’re asking Americans to die, you have to be able to explain it in terms of the national interest.²

Henry Kissinger

The most fundamental task in devising a grand strategy is to determine a nation’s national interests. Once they are identified, they drive a nation’s foreign policy and military strategy; they determine the basic direction that it takes, the types and amounts of resources that it needs, and the manner in which the state must employ them to succeed. Because of the critical role that national interests play, they must be carefully justified, not merely assumed.³

Robert J. Art

Both Henry Kissinger and Robert Art make it clear that the identification of national interests is crucial for the development of policy and strategy. Interests are essential to establishing the objectives or ends that serve as the goals for policy and strategy. “Interests are the foundation and starting point for policy prescriptions.” They help answer questions concerning why a policy is important.⁴ National interests also help to determine the types and amounts of the national power employed as the means to implement a designated policy or strategy.

The concept of interest is not new to the 21st century international system. It has always been a fundamental consideration of every actor in the system. Despite what many academics have maintained, national interests are not only a factor for nation states. All actors in the international system possess interests. Using Buzan, Waever, and Wilde’s units of analysis, the need to have interests is equally applicable to international subsystems (groups or units that can be distinguished from the overall system by the nature or intensity of their interactions with or independence on each other) like the Association of Southeast Asian Nations and the Organization of Petroleum Exporting Countries, individual units (actors consisting of various subgroups, organizations, and communities) such as nations of people that transcend state boundaries and multinational corporations, subunits (organized groups of individuals within units that are able or try to affect the behavior of the unit as a whole) like bureaucracies and lobbies, and finally, individuals that all possess separate personal interests as they participate in the overall system.⁵ Some academics choose to distinguish between national interests (interests involved in the external relations of the actor) and public interests (interests related within the boundaries of the actor).⁶ For purposes of this essay, given the closing gap between the influence of external and internal issues in the 21st century international system brought about by the associated components of a rapidly globalized world, there will be no distinction made between external and internal interests. In effect, they all fall under the concept of the national interest.

There is a generally accepted consensus among academics that interests are designed to be of value to the entity or actor responsible for determining the interest for itself. This could include those interests that are intended to be “a standard of conduct or a state of affairs worthy of achievement by virtue of its universal moral value.”⁷ However, there is less agreement over the question of whether all nation-state interests are enduring, politically bi-partisan, permanent conditions that represent core interests that transcend changes in government,⁸ in contrast to those interests that may be altered over time and or respond to change in the international system.⁹
There is also disagreement over whether national interests are designed purely for the sake of advancing the power of an actor with the object of attaining greater security for that actor, or whether interests can be guided by values and ethics with the intent of doing some type of good for parts of the international system, or the overall system in general. This might include collaboration and coordination with other actors in the international system. It may also require the interest-crafting actor to subordinate certain interests that only benefit it for the sake of other interests that are of greater value to additional actors in the system.

Finally, there is disagreement over the categorization and determination of intensity or prioritization of interests. Terms like survival, vital, critical, major, serious, secondary, extremely important, important, less important, humanitarian, and peripheral have been used to categorize interests in academic writings and official government documents. Some categorize how significant the interest is in terms of chronological relationship to the actor that determines the interest (near term versus longer term impact), while others relate categories to the intensity of the substantive influence that the interest is determined to have on the actor. Categorization is directly related to the question of prioritizing interests based on intensity, deciding which types of interests are more important than others. Perhaps of equal importance is the amount of distinction made between the categories in the prioritization process. In a zero-sum environment, this distinction could determine whether or not an actor’s resources, and in what amount, would be allocated toward the attainment of the interest.

After developing a detailed definition of national interests and analyzing their uses, this chapter will propose a process that future policymakers can use to craft reasonably attainable statements of national interests. The chapter assesses the issue of fixed or adjustable interests over time to understand what degree of flexibility that crafters of interests might have. Similarly, it examines whether policymakers create interests only for the purpose of advancing the power, and thus security, of a state, or if they can also be developed based on ethical and value-driven intent. Finally, the essay examines the creation of a set of category definitions that will provide necessary flexibility for a 21st century policymaker.

In the end, the focus of this chapter will be the development of a series of issues or questions that any policymaker can use as a guideline to assist in the development of national interests that are within the realm of the possible.

DEFINITION OF NATIONAL INTEREST

In a very generic sense, national interests are “that which is deemed by a particular state (actor) to be a . . . desirable goal.” The attainment of this goal is something that the identifying actor believes will have a positive impact on itself. Realization of the interest could enhance the political, economic, security, environmental, and/or moral well being of a populace and the state (actor) or national enterprise to which they belong. This holds true within the territory of the actor, as well as in any external relations that the actor may undertake outside of the administrative control of that actor.

Interests would be the concern of the actor as a whole, “or at least (for) a sufficiently substantial subset of its membership to transcend the specific interests of (any) particular groups” within the actor. For the United States, the executive body of the federal government, rather than the legislative or judicial, has the primary responsibility for determining the national interests that address perceived needs and aspirations external to the geographic borders of the nation. The determination of internal or domestic interests is more complex with executive and legislative bodies at federal, state, and local levels interacting in the political process to reach decisions.
USES FOR NATIONAL INTERESTS

Interests serve as the foundation and guiding direction for the formulation of policy. For a nation state, there is more often than not a direct correlation between the nation’s interests and foreign policy. In most cases, “statesmen think and act in terms of interest.” Those interests believed to be the most significant for the attainment of a policy objective (the actor’s wants and needs) will earn the greatest amount of emphasis during the policy formulation process. They should be designed to tell the policymaker why and how much he should care about an issue. Interests help determine what kind and how much attention should be given to both challenges or threats and opportunities. They also assist the policymaker in identifying key issues during the policy formulation process. Examples could include: How are current developments affecting interests? Are hostile forces able to negatively impact the interests? Is there sufficient power (both military and non-military) available to protect the interests? How much of that power must be used to defend the interests? In effect, the understanding of an actor’s interests helps the actor determine the degree of importance to be given to an issue.

FIXED OR CHANGING INTERESTS

Some political scientists, like Hans Morgenthau, believe that national interests are permanent features of the international system. Regardless of what government is in power, the interests of a nation state remain fixed components of the policymaking process. They are “unaffected by the circumstances of time and place.” Some interpret this to mean that nation states possess permanent, unchanging core interests. This would imply that the United States has core interests, potentially in existence since the beginning of the republic in the later part of the eighteenth century, that have never changed since their inception. This analysis will suggest that adjustments have, in fact, taken place over the course of time.

Morgenthau, himself, indicates that the key concept of interest is not to be defined “with a meaning that is fixed once and for all.” Morgenthau believed the generic concept of interest was unchanging in terms of its importance to the international system. But this did not mean that individual interests could not be adjusted or newly created in order to take into account changes in the international system.

Other theorists have argued that interests are likely to be “a diverse, pluralistic set of subjective preferences that change periodically, both in response to the domestic political process itself and in response to shifts in the international environment. The national interest therefore is more likely to be what the policymakers say it is at any particular time.” Like most actors in the international system, the United States has had both changing and unchanging national interests over an extended period of time. Some interests have been a more consistent focus of various policies and strategies than others, and all have had different degrees of importance over both the long and short terms. Some of these interests changed or adjusted because of shifting world conditions and/or domestic political considerations.

Using a portion of the preamble of the Constitution, all seven national security strategies drafted during the course of the Clinton administration identified three core interests that have remained timeless in some manner, shape, or form for the United States: “provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity.” These were translated in those national security strategies into the modern day interests of: enhancing security at home and abroad (security), promoting prosperity (economic well-being), and promoting democracy and human rights (democratic values).
For purposes of 21st century America, these three core interests may be defined as:

**Security:** “Protection of the people (both home and abroad), territory, and institutions of the United States against potential foreign dangers.” This has always included defense of the American homeland. Domestically, it would now include protection of critical infrastructure such as energy, banking and finance, telecommunications, transportation, water systems, and cyber networks. America’s expansion into the world that began in the 19th century resulted in a broadening of the external portion of this core interest to now include components like protection against WMD proliferation, freedom of movement, access to key facilities, and assurance that U.S. national security institutions are transformed to meet the challenges and opportunities of the 21st century.

**Economic Well-Being:** “Promotion of (American) international trade and investment, including protection of United States private economic interests in foreign countries.” The 19th century American entry onto the world stage also ensured that this core interest would evolve to now incorporate expanded global economic growth through free markets and trade, to include the advance of globalization.

**Democratic Values:** Until the 20th century, this core interest was confined to ensuring that the domestic democratic process and associated values framed the traditional American tenets of “life, liberty, and the pursuit of happiness.” The nation’s continued expansion into the world witnessed a change that in the 21st century can be said to include the promotion of democracy and human rights abroad.

All three of these, now 21st century core interests, have also evolved as a result of the American experience in the aftermath of the two world wars of the 20th century into what can be considered a fourth core interest for the United States:

**Stable and Secure World Order:** A favorable world order based on the “establishment of a peaceful international environment in which disputes between nations can be resolved without resort to war and in which collective security rather than unilateral action is employed to deter or cope with aggression.” Requirements for global stability in the 21st century world would also include secure alliances and coalitions, the security of regions or countries in which the U.S. has a sizable economic stake, and the need to respond to humanitarian or other concerns, such as response to natural and manmade disasters, protecting the global environment, minimizing destabilizing refugee flows, and support for health problems like HIV/AIDS and food and water shortages.

### REALISM OR MORALITY-BASED INTERESTS

Once the appropriate interests have been determined, the next question is why should the actor care enough to do anything about them. Is the underlying rationale for any kind of action to be one of realism or morality, or can both be utilized to explain the need to pursue certain interests? The complexity of the international system creates a decision-making problem that forces the crafter of national interests to make hard “choices concerning moral and national values; national treasure and even blood; and the time, energy, and influence that a government expends on external matters.”

The realist school of thought is founded on the premise that as a tool for the policymaker the national interest is intended to identify what is in the best interest of his state in its relations with other states. The term “best” is defined in terms of power and security. Realists view national security as the primary basis of a state’s national interest because of the threat of anarchy and constraints on sovereign states that are part of the international system. Anarchy in the international system would be manifested as “disorder, disarray, confusion, or chaos.” This could either be interpreted as a description of the general condition of the international system, or as the absence of any authoritative institutions, rules, or norms that are more powerful than any sovereign state actor.
and, thus, have the ability to ensure security in the overall system.\textsuperscript{35} The result is a lack of security for the actors that are members of the system.

In addition to anarchy, realists are also very sensitive to threats to a state’s interests that are posed by “external constraints on their freedom of maneuver from international treaties, the interests and power of other states, and other factors beyond the control of the (state) such as geographic location and dependence on foreign trade.”\textsuperscript{36}

According to realism, the absence of security caused by anarchy and constraints in the system causes states to orient their interests on “the acquisition and management of power,” more often than not to be related to some form of the military element of national power.\textsuperscript{37} The result, according to Morgenthau, is the need to focus an actor’s national interests on meeting its security requirements by “protect(ing) (its) physical, political, and cultural identity against encroachments by other nations.”\textsuperscript{38}

For the national interest, the emphasis in realism is on doing what is primarily and almost solely to the advantage of that particular state actor. It is done with an express focus on power and security. In contrast, morality-based interests are defined “more broadly to encompass intangible values like human rights, freedom from economic deprivation, and freedom from disease.” While military power could still be the national power element of choice, morality-based interests would promote concepts such as “the values of national self-determination and economic egalitarianism.”\textsuperscript{39} The last part of the 20th century witnessed a surge in support for these kinds of morality-based interests through the execution of humanitarian intervention in places like Somalia, Haiti, Bosnia, and Kosovo. Humanitarian intervention is “armed interference in a sovereign state by [other states] with the . . . objective of ending or reducing suffering within the first state. That suffering may be the result of civil war, humanitarian crisis, or crimes by the first state including genocide.”\textsuperscript{40} Morality-based interests are not developed only to benefit the actor that crafts the interest. Rather, they are designed so other actors in the international system are also likely to benefit.

Given the complex world of the 21st century, neither one of these approaches is likely to be the sole rationale for why any given interest will be developed to guide policymaking. The bipartisan Commission on America’s National Interests assessed that the difference between realism and morality-based interests was more an alternative expression of valuation between the two as opposed to two dichotomous poles in contraposition to each other. The American people are oriented on the survival and well being of the United States, while at the same time, owing much to historically embedded values, they are concerned about human rights and the welfare of individuals in other countries.\textsuperscript{41}

In addition, Joseph Nye, the Dean of the Kennedy School at Harvard and clear promoter of the morality component through his advocacy of soft power, argues that national interests are a set of shared priorities that often include issues of human rights and democracy. “A democratic definition of the national interest does not accept the difference between a morality-based and an interest [realism]-based foreign policy.”\textsuperscript{42} There is both constant tension and constant cooperation between the two underlying rationales that help guide the formation of interests. Given the situation of the moment, each one will have its own applicability. Henry Kissinger, a most noted supporter of the realist school, described it best when he stated that:

\begin{quote}
The alleged dichotomy of pragmatism (realism) and morality seems to me a misleading choice. Pragmatism without a moral element leads to random activism, brutality, or stagnation. We must always be pragmatic about our national security. We cannot abandon national security in pursuit of virtue. But beyond this bedrock of all policy, our challenge is to advance our principles in a way that does not isolate us in the long run.\textsuperscript{43}
\end{quote}
The issues associated with the 21st century world will require the crafter of national interests to simultaneously be both a pragmatic realist and an advocate of morality. Based on circumstances, sometimes one theoretical foundation will have greater influence than the other for the development of interests. With all of the many complex issues that will be present in the 21st century, this is likely to be true for American policymakers so long as the United States intends to maximize its influence on a global basis.

CATEGORIZATION AND INTENSITY OF INTERESTS

In order for the crafter of national interests to determine what types of resources to allocate in what amount toward the attainment of an interest, he must understand the categorization and determination of the intensity of the interest. This part of the crafting process is necessary to address key policy questions like: Which issues matter most? Why should people care? How much should the populace be willing to pay to deal with identified threats or take advantage of recognized opportunities?

The determination of priority—usually expressed in terms of the intensity of an interest—is crucial because, from the perspective of the policymaker, interests may very well come into conflict with each other. This conflict could be over the resources that an actor would require to attain the interests, including the time and attention of key decision makers. Such resources are likely to be limited in some manner for any decision making body, thus requiring prioritization before the interest crafting process is complete.

The most difficult problem in this part of the process is usually the determination of the intensity or stake that an actor has in a specific issue. The leadership of the interest crafting actor must address its desire to influence issues and events, both external and internal, its willingness to use any or all elements of national power to defend or advance certain interests in preference to others, and potentially its willingness to do so at the expense of other actors.

Categorization is important not only because it can be used as a framework for systematic evaluation of national interests, but also because it can also provide “a way to distinguish immediate from long-range” interest concerns using time as a basis. Identified academic sources used between two and four different categories of interests, and two National Security Strategies published during the Clinton Administration used three categories. The categories are designed to delineate the different levels of intensity, or order of priority for any respective interest.

The principal difference amongst these approaches is whether they use a separate category for survival interests, or whether they consider survival interests and vital interests essentially one and the same. “The major difference between a survival interest and a vital interest” is “in the nature and imminence of a military threat” to the actor. Both terms address the life of the actor, one deals with the imminent danger of death while the other is only potentially fatal. In this case, the time difference is the key. If one believes there are specific interests where the very survival or existence of the actor, and little more, is at stake, then four categories are necessary.

For purposes of this assessment, using the work of Neuchterlein, Art, and The Commission on America’s National Interests, this chapter will use four prioritized categories of intensity, from high to low (Survival, Vital, Important, Peripheral):

Survival.

These represent the single most important interests for any actor. This is the very essence of the actor’s existence—the protection of its citizens and their institutions from attack by enemies, both
foreign and domestic. It addresses an imminent threat of attack and is an interest that cannot be compromised.\textsuperscript{51} If not attained, it will “bring costs that are catastrophic, or nearly so.”\textsuperscript{52} Whatever can be done would be done to ensure the survival of the actor, to include the use of military force.

\textit{Examples:} Prevent, deter, and reduce the threat of nuclear, biological, and chemical weapons attacks on the interest crafting actor or its military forces abroad; Ensure the survival of allies and their active cooperation in shaping an international system in which the actor crafting the interest can thrive; Prevent the emergence of hostile major powers or failed states on the borders of the actor crafting the interest.\textsuperscript{53}

\textbf{Vital.}

A vital interest exists when an issue is so important to an actor’s well being that its leadership can only compromise up to a certain point. Beyond that point, compromise is no longer possible because the potential harm to the actor would no longer be tolerable.\textsuperscript{54} If the interest is achieved, it would bring great benefit to the actor; if denied, it would carry costs to the actor that are severe but not catastrophic.\textsuperscript{55} Such costs could severely prejudice but not strictly imperil the ability of the actor’s government to safeguard and enhance the well being of its populace.\textsuperscript{56}

\textit{Examples:} Prevent the regional proliferation of weapons of mass destruction (WMD) and delivery systems; prevent the emergence of a regional hegemon in important regions; promote the well-being of allies and friends and protect them from external aggression.\textsuperscript{57}

\textbf{Important.}

These interests would be significant but not crucial to the actor’s well being. They could cause serious concern and harm to the actor’s overseas interests, and even though the result may be somewhat painful, would be much more likely be resolved with compromise and negotiation, rather than confrontation.\textsuperscript{58} It could increase its “economic well being and perhaps its security” and, thus, contribute to “making the international environment more congenial” to its overall interests. The potential value, as well as potential loss of these interests, would be moderate and not great.\textsuperscript{59} Important interests differ from vital and survival interests in the degree of danger perceived to the actor, and the amount of time available to find a peaceful solution to the issue.\textsuperscript{60}

\textit{Examples:} Promote pluralism, freedom, and democracy in strategically important state actors as much as feasible without destabilization; discourage massive human rights violations in foreign countries; prevent and, if possible at low cost, end conflicts in strategically less significant geographic regions.\textsuperscript{61}

\textbf{Peripheral.}

These interests neither involve a threat to the actor’s security or the well-being of its populace, nor seriously impact the stability of the international system.\textsuperscript{62} They are desirable conditions, but ones that have little direct impact on the ability of the actor to safeguard its populace.\textsuperscript{63}

\textit{Examples:} Promoting the economic interests of private citizens abroad,\textsuperscript{64} enlarging democracy everywhere for its own sake; preserving the territorial integrity or political constitution of other actors everywhere.\textsuperscript{65}
THE INFLUENCE OF INTERESTS ON 21ST CENTURY POLICY AND STRATEGY MAKING

Just as the development of national interests is complex, so is the actual application of interests in the policy and strategy formulation process. The importance of national interests to the process is significant, as described by Lord Palmerston, the British foreign minister in 1856: “When people ask me . . . for what is called a policy, the only answer is that we mean to do what may seem to be best, upon each occasion as it arises, making the interests of our country one’s guiding principle.”

As we have seen, the crafter participating in the development of interests must take the following issues into account: How flexible can the interest of the moment be in relation to the actor’s core interests of the period? Must the interest be based on either realism or morality, or rather; can it be some combination of the two? Where does the interest fit in terms of how it is to be categorized with what degree of intensity?

Perhaps the most complicating factor that the crafter must take into account will be the influence of domestic politics on the interest formulation process. The concept that resource allocation by type and quantity will be impacted by the identification of the interest designed to guide a policy creates a critical linkage between the two. The connection is key because, in a democracy, it is the government of a state actor that will have to sustain the investment of resources required to attain the interest. Interests with greater fidelity and less ambiguity are easier for governments and populations to support because they have a clearer idea of why it is they are being asked to do something, like allocate money or military forces. At the same time, such a detailed understanding could lead to a lack of support on the part of either the government, the people, or parts thereof, if the interest is assessed to be too low on the scale of intensity.

If they are to develop relevant and executable 21st century interests, a most important understanding for those participating in the interest development process must be that they are endowed with a degree of flexibility allowing them to discern the limits of domestic politics in terms of what types of interests are likely to be supportable. This must entail the provision of the maximum amount of data available for the development and resulting identification of the interests at hand. The greater the fidelity and degree of consensus on categorization and level of intensity, the greater the possibility that the public will support actions to protect or advance the interest.

But even with proper addressal of all the most important issues, resulting in a logical, supportable interest, at times governments and populations do not support some interests with a high level of intensity. Conversely, political bodies often support other interests that are identified with a low level of intensity. The explanation for this behavior is typically found in the internal political decision making of the actor. For example, sometimes domestic lobbies exercise a significant amount of influence on parliaments or the American congress, with resulting impact on decisions that determine whether some interests will be supported at the level necessary to achieve attainment.

One such example comes from the period between 1992 and 2001 when the relatively small Armenian lobby in Congress, strongly supported by the Armenian American community, prevented the United States from providing any direct aid to Azerbaijan. This was in response to the Azerbaijani blockade of Armenia, which was at war with Azerbaijan over the enclave of Nagorno-Karabakh. American government policymakers felt it important to provide support for Azerbaijan because it was just emerging from the former Soviet Union and lay in a very sensitive geographic region bordering the Caspian Sea and Iran. However, they were prevented from doing so even though assistance to Azerbaijan could have fallen within the parameters of a vital interest in an effort to protect the state and its Caspian Sea-based hydrocarbon resources from external aggression.

To recapitulate, the interest crafting process should include the following to ensure the greatest opportunity for the development of interests that are both appropriate and supportable for any
actor. These issues and questions must be addressed during the course of the process (the conclusion of which is when the national interest is identified and ready for use to guide the development of policy and strategy):

- They should be designed to tell the policymaker why and how much he should care about an issue. Part of this is framed by the determination of where realism and morality fit in the process.
- Interests help determine what kind and how much attention should be given to challenges or threats, as well as opportunities.
- They also assist the policymaker in identifying key questions to address during the policy formulation process. Examples could include:
  - How are current developments affecting the actor’s interests?
  - Are hostile forces able to negatively impact the actor’s interests?
  - Is there sufficient power (both military and non-military) available to protect the actor’s interests?69
  - Which issues matter the most? Where do they fit in terms of the interest prioritization levels of intensity? Survival, Vital, Important, or Peripheral?
  - Why should people care?
  - How much would the populace be willing to pay to deal with identified threats and challenges or take advantage of recognized opportunities? Is it enough?

**SUMMARY**

In the end, while some may believe as Lord Palmerston stated to the House of Commons in 1848 that “we have no eternal allies and we have no perpetual enemies. (Only) our interests are eternal and perpetual, and those interests it is our duty to follow,”70 the challenges and opportunities found in the 21st century will require the flexibility to craft interests that can work in this complex world, writ large. They may be rationalized in terms of either realism or a morality-based approach, or by a combination thereof in accordance with the particular circumstances of the issue. In turn, this rational determination is likely to drive how future policymakers decide to categorize and prioritize future interests. It will not be easy, but it must be done.

**ENDNOTES - CHAPTER 1**

CHAPTER 2
THE NATIONAL SECURITY COMMUNITY, REVISITED

Walter H. Leach

At the time of this writing, a search on Google.com for “national security community” registers about 62,500 hits. The abstract to a 1998 National War College paper entitled “U.S. National Security Structure: A New Model for the 21st Century” defines the national security community as the Department of Defense (DoD), Department of State and the National Security Council (NSC). In a chapter titled “Strengthening the National Security Interagency Process” by Deutch, Kanter, and Scowcroft, they add the Central Intelligence Agency (CIA). Interestingly, a group called the National Security Network addresses a so-called “progressive national security community,” highlighting a partisan political divide in making national policy. In site after site, authors use the term without definition, indicating the authors assume the reader knows its definition. Who are the major players in the national security community today? The Congress, think tanks, interest groups, and the media all exert significant influence over American security policy and strategy formulation. How do they formally and informally interact? To whom are they accountable and from whom do they get their feedback? Answering these questions will illuminate potential opportunities and barriers to successful policymaking and strategy formulation.

The Congress.

The first and arguably most direct role player to be considered is the Congress. While the Constitution vests the President with executive powers, it gives the Congress the legislative responsibility to make the laws of the land and wield the power of the purse. Additionally, the Constitution allows the President to make treaties with foreign governments “by and with the Advice and Consent of the Senate.” When the Executive branch implements foreign policy, expenditure of government funds is usually involved, so the Congress has a formal role to play in the appropriations process.

One vivid example of struggle between these two branches occurred in May of 2007 as President Bush vetoed an Iraq War supplemental appropriation. When this legislation was introduced, the policy of the U.S. was to use military forces in Iraq to train Iraqi security forces, provide security to the Iraqi people and to support reconstruction efforts. Critics frequently labeled the President’s policy “stay the course,” and he rejected calls for a scheduled withdrawal of U.S. troops. The supplemental appropriation language called for establishing a timetable for withdrawal of U.S. combat troops from Iraq as conditions for providing supplemental funding to continue the war effort. The President repeatedly stated his intention to veto the bill as it was being drafted.

Leaders of the Democratic majority in Congress also clearly stated their intention to carry out what they saw as the will of a majority of the American people. Their intent was to begin the process of disengaging American combat forces from what Congressional Democrats were labeling an Iraqi civil war. On 2 May 2007, the House of Representatives failed to override the President’s veto and then set to work trying to develop another legislative vehicle that would accomplish a transition of responsibility from U.S. to Iraqi forces. They also wanted to encourage the Iraqi government to take further responsibility for political reconciliation. On 11 Jul, the Washington Post reported on various efforts by Democrats and Republicans to force the administration’s hand, either to amend the mission and focus of the troops in Iraq or to pull out the combat troops entirely. Those Congressional actions were directed squarely at changing U.S. policy in a national security area.
While this power struggle illustrates direct conflict, how does the Congress routinely influence policy and strategy formulation in the national security community? The answer is through appropriations and oversight. Congress provides appropriations as well as oversight for all the players in U.S. foreign policy— including the Departments of State and Defense and the CIA. While not enumerated in the Constitution, Congressional oversight logically flows from its appropriations role. The leaders of the foreign policy agencies routinely go to Capitol Hill to testify before various committees and to answer questions, both in and out of committee sessions. Members of Congress also have individual, direct access to the Executive agencies by sending letters of inquiry. Operating beneath the level of public awareness, but arguably no less important, are the relationships between mid-grade professionals in these agencies and the professional staffs of the House and Senate. Separate from the personal staffs of Members, these professional staffs exist to provide expertise to committees in drafting legislation. To that end, committees frequently hire staffers with former service in and around the Executive agencies. Informal communication between the Executive and Legislative branches is continuous at the staff level. Agency staffers and Congressional staffers can frame the debate and set the stage for successful legislation. They also provide early warning to their superiors when a confrontation appears likely. Much of the effective give-and-take between the branches is concentrated at this level, while the Members and agency senior executives work more directly in the media spotlight.

As a body within the Executive Office of the President, the NSC is largely immune from direct Congressional pressure. At the same time, the primary members of both the principals and deputies committees—the Secretaries and Deputy Secretaries of Defense, State and Treasury, the Director and Deputy Director of the CIA and the Chairman and Vice Chairman of the Joint Chiefs of Staff are each subject to Congressional oversight in their roles within their respective organizations. The President ultimately determines the extent to which the NSC formally cooperates with Congress.

The NSC Staff is also mostly immune from direct Congressional pressure. The President can claim executive privilege to protect NSC staff members from Congressional scrutiny. At the same time, the NSC Staff must remain cognizant of the role and power of Congress, even as they serve the President. Similar to the previous discussion of relationships, the working-level relationships between Congress and the NSC Staff can foster harmonious or acrimonious interactions that help or hinder the advancement of U.S. policy. When the Executive and Legislative branches come into direct conflict and neither is prepared to compromise, the opportunity may arise for the Judiciary to involve itself in settling issues of Constitutional powers.

In asking the question, “Who is the Congress accountable to?” a researcher turns to the Constitution. All Constitutional legislative powers are vested in the Congress. In their role as legislators, Members advance the interests of the Nation, thereby supporting and defending the Constitution. At the same time, the Constitution makes Members accountable to their constituents via regular elections. These legislative and representative roles are generally complimentary, yet there are occasions where Members are forced to choose between these two interests. For the purposes of this paper, it is sufficient to recognize there can be significant tension between the two roles.

The People provide regular feedback to the Congress in a variety of ways. The most obvious method is through elections. Every 2 years in the House and every 6 years in the Senate, Members wishing to continue their service must stand for reelection by their constituents. Between elections, Members receive feedback from their constituents and other interested citizens through written or electronic contact with Members’ offices, personal visits in Washington or in the home district, and through financial contributions. Members may occasionally receive contradictory feedback from their constituents and the rest of the country, reflecting conflict between their twin roles.
In their Constitutional role as legislators, Members also receive feedback from both the Executive branch and Judiciary. The Executive branch feedback process includes the staff-level communication previously described, as well as formal proposals or draft legislation the President may send to Congress. Additionally, the Executive provides the Congress feedback via the People. The President can use the bully pulpit to connect with the American electorate via the media. If he is successful, the electorate can increase or modify the feedback they provide the Congress. The Judiciary provides feedback to the Congress by ruling on challenged laws, with the Supreme Court as the final arbiter. When considering controversial legislation, the Congress always has an eye on the likely Constitutionality of the legislation, as well as on the various ways opponents may choose to challenge the Constitutionality of the law through the courts.

With two formal lines of accountability, Members of the House of Representatives are always in a race for re-election and Senators are finding they have less and less time where re-election does not impact everything they do. This introduces a tangled web of relationships that usually operates just below the public consciousness. The most logical result of this perpetual campaign scenario is strengthening of the representative role (accountable to the People) vis-à-vis the legislator (accountable to the Nation) role. Also becoming increasingly visible with each new campaign is the growing impact of money.

While any campaign organization is expensive to operate, for truly competitive races the desired level of media saturation can cost enormous sums. To comply with ethics restrictions while also raising the required resources to compete, Members must separate their personal schedules and their staffs into Congressional and campaign foci. Interest groups can help fill the fundraising need. These organizations attempt to educate Members and hopefully improve resulting legislation. At the same time, they bring various financial resources to bear in ways that can benefit a Member (or the opposing candidate). Members receive direct, although informal, feedback in the levels of campaign contributions being steered their way by these interest groups, especially as compared to contributions to their opponents. Interest groups are the focus of a separate section later in this paper. While many writers have lamented the perceived connections between politicians and money, the national security professional needs to recognize the numerous influencers operating behind the scenes attempting to sway the course and content of legislation that may impact national security policy.

As noted earlier, the high cost of media advertising drives ever more time and effort into campaign fundraising. While serving various roles, the presence and actions of the media complicate the numerous relationships involved in U.S. policymaking. The media is the focus of the final section of this chapter.

**Think Tanks.**

Of the many influences on U.S. foreign policy formulation, the role of think tanks is among the most important and least appreciated. A distinctively American phenomenon, the independent policy research institution has shaped U.S. global engagement for nearly 100 years. But because think tanks conduct much of their work outside the media spotlight, they garner less attention than other sources of U.S. policy – like the jostling of interest groups, the maneuvering between political parties, and the rivalry among branches of government.11

Richard N. Haass
Director, Policy Planning
U.S. Department of State

A think tank is an organization that conducts policy-oriented research. Think tanks provide ideas and analysis on myriad foreign and domestic policy issues. They further serve to assist the public
in making informed decisions about these subjects. According to Richard Haass, their primary contribution is to bridge the gap between academia and government. While government bureaucrats are too busy in their day-to-day roles to “take a step back and consider the broader trajectory of U.S. policy,” academicians are generally focused on “arcane theoretical and methodological debates only distantly related to real policy dilemmas.” Much of the academic research in any policy field does not end up in a form useful to policymakers. Think tanks serve a useful function as they review the extant literature and distill or synthesize these material into a useful format. More broadly, think tanks serve civil society in five ways: generating ideas, providing talent to government, offering venues to gather policy professionals, engaging the public, and serving as a middle ground between opposing parties.

Think tanks, operating outside the government bureaucracy, have the freedom to challenge the conventional wisdom. They may be independent or associated with interest groups. Observing the *modus operandi* of the administration, think tanks develop new approaches to policy challenges as well as innovative concepts. At the same time, think tanks may also determine that the current administration’s approach to an issue is right on target. Recognizing emerging trends and problems, think tanks can translate the challenges into actionable policy issues. During World War II, the Council on Foreign Relations initiated a project entitled War and Peace Studies that ultimately generated 682 memoranda for the State Department. It was their flagship publication, *Foreign Affairs*, which published “The Sources of Soviet Conduct” in 1947, providing the intellectual foundation for the strategy of containment. Think tanks also serve as intellectual support for political campaigns, generating policy papers and providing advice to candidates on a wide range of issues. In their role as idea generators, they also serve as recyclers. As the number of information sources and paths of information transfer explode, gatekeepers of that process gain power. As Keohane and Nye noted in 1998,

> To understand the effect of free information on power, one must first understand the paradox of plenty. A plentitude of information leads to a poverty of attention. Attention becomes a scarce resource, and those who can distinguish valuable signals from white noise gain power . . . . Brand names and the ability to bestow an international seal of approval will become more important.

In addition to their work generating ideas, think tanks also make available a wide range of intellectual talent, with appropriate policy focus, for incoming administrations to draft into government service. Almost as important, think tanks also provide fertile ground for outgoing public servants to remain engaged in the policy realm. Stepping back from the day-to-day grind of government service allows these professionals time to ponder their experience from a wider perspective. Snaring a retiring high-profile public servant can add luster to a think tank’s reputation and possibly enhance donations. One of the latest examples of the revolving door between government and think tanks is the move of former Defense Secretary Donald Rumsfeld from his post at the helm of the DoD to a visiting fellowship at the Hoover Institute at Stanford University. Figure 1 below gives some idea of the prevalence of this trend. An extensive list is available in Appendix Two of Donald Abelson’s 2006 book, *A Capital Idea: Think Tanks and US Foreign Policy*. Consider one cautionary note about the revolving door. Individuals who may consider moving in either direction may constrain their policy research or innovation, or worse yet, moderate their actions or the report of their findings with a view to remaining in the good graces of their possible future employers.
Think tanks also serve as hosts for gatherings of policy professionals. Whether hosting a single-issue lecture or convening a multiday symposium, these gatherings foster debate and understanding. While they shape opinions, these meetings can also lay the foundation for new ideas to successfully enter the policy arena. Just as importantly, these meetings can also serve to demonstrate why some new ideas need more time for thought before being implemented. Think tanks can also provide non-partisan venues for government officials to announce new initiatives or for foreign officials to engage the wider US policy community.

Using both the public media and their own publishing resources, as well as the Internet, think tanks attempt to engage and educate the public. While some reflect the philosophical leanings of associated interest groups, others serve as independent judges of public policy and government performance. In fulfilling this role, they also build confidence in public policy and public officials. Even where government fails to deliver sufficient results, think tanks help shine light on policy failures and suggest corrective actions. The appearance of independence from government is vital in this role. Additionally, these organizations serve as interpreters of current events for citizens, providing various viewpoints on the issue of the day. Researcher Diana Stone suggests, however, that think tanks’ engagement with the public is a one-way relationship. That is, there is little formal structure in most think tanks to receive and process public feedback. She also notes that think tanks are focused heavily on policy elite and around governmental centers of power, effectively limiting their engagement mission.

Similar to their role in providing venues for professionals, think tanks can also provide venues for mediation between opposing groups. The U.S. Institute of Peace occasionally serves as a conduit for behind-the-scenes political negotiations, while also providing negotiation training to U.S. diplomats. The Carnegie Endowment hosted meetings over eight years on South Africa, establishing an ongoing dialogue focused on South Africa’s future and helping enable its political transition. Additionally, the Center for Strategic and International Studies has been involved in mediating divisions between Greeks and Turks and ethnic groups in the former Yugoslavia. In this role, think tanks can serve an important support function for the U.S. government in lessening tensions.
At this point, it is apparent that think tanks must maintain some level of positive reputation among both the public and the policy community to have any broad impact. Indeed, many think tanks strategize about garnering media attention though seminars, conferences and public lectures. They also reach out widely to academics, policymakers and journalists to get the message out. These events bring credit to the think tank as well as educate others about their work. Some think tanks pursue academic audiences through university lectures or pursue a more formal influence through Congressional testimony. Virtually all think tanks now have Internet home pages making their products widely available for download. While Donald Abelson argues that think tank influence is quite difficult to assess accurately, he notes that some think tank directors use media coverage as a gauge of their own organization’s policy influence.26

While the word “independent” is frequently used in describing think tanks or their roles, most often, the word refers to the relationship between think tanks and the government. It should not be construed to mean that think tanks are necessarily impartial, nor that they come to their conclusions or operate in the policy world without outside influence. Looking internationally, Stone claims that the term think tank brings a certain prestige to an organization, and that the definition has become very elastic, especially in a non-Anglo-American setting. Think tanks reflect their native political environment, and the independence from government influence expected of a U.S. or UK think tank should not be assumed for others.27

To be able to afford all of the activity related above, and the amount of professional expertise at their fingertips, where do think tanks get their funding? There are four primary avenues of funding think tanks in the U.S. Many, if not all, think tanks accept donations from private individuals. Considered separate from these individual donations are endowments or major contributions of wealthy individuals. Private foundations provide another source of funding, as do government grants and contracts.28 These funding sources are also a source of feedback. As an organization produces results that are favorable to a donor, the tendency would naturally be for that donor to consider maintaining or increasing the funding stream. Similarly, if the think tank fails to deliver significant enough results, or somehow works against the values and interests of the donor, the natural tendency would be to eliminate or decrease future funding.

At the same time, donors can choose to overlook short-term results in making funding decisions, while think tanks can also choose to operate without regard for the opinions of their funding sources. Human nature suggests that these situations would be exceptions to the rule. This fact should not be construed to be a guarantee of partisanship on any given issue, but simply a cautionary note not to assume impartiality. Indeed, James McGann, Senior Fellow at the Foreign Policy Research Institute told a Foreign Press Center audience, “. . . most people don’t talk about it, most institutions will rail against what I’m about to do, because they don’t want to be pegged in being one quadrant or another in terms of left, center, right, but the reality is those people who are in the know know what—where think tanks fall.”29 Knowing this, donors select the think tanks they choose to support, and think tanks tend to generate ideas and products that reflect their employees and donors. This polarization of some think tanks toward ideological positions can provide utility where they balance each other, but this tendency can also leave the ideological center with less of a policy voice.

Think tanks as organizations have no direct line of accountability. As mentioned above, they are indirectly accountable to their funding sources. Losing a funding source could lead a think tank to find other sources of revenue which, in turn, may or may not lead to a change in organizational focus. In a broader sense, think tanks are also accountable to their target audience(s), as losing a significant portion of their audience will reduce their perceived influence. This loss of influence may, in turn, also affect their funding. At the individual level, think tank scholars are directly accountable to their boards of directors.
Interest Groups.

In 1787, writing in Federalist #10, James Madison defined “faction” as “... a number of citizens, whether amounting to a majority or a minority of the whole, who are united and actuated by some common impulse of passion, or of interest, adverced [sic] to the rights of other citizens, or to the permanent and aggregate interests of the community.” Today an interest group can be broadly defined as any group of non-elected individuals that organize themselves in an attempt to influence public policy. While focused on the national security community, this paper nevertheless recognizes that interest groups not claiming any interest in security policy can have impacts on policy and strategy formulation.

An About.com web page entitled “Issues, Organizations, and Interest Groups” gives some feel for the Wild West nature of the world of interest groups. At the time of this writing, the website contained 211 links to interest groups from across the political sphere. From well-known groups like the National Rifle Association and Greenpeace to polar opposites such as National Right to Life and Planned Parenthood to lesser-knowns such as Stewards of Family Farms, Ranches, and Forests, this website barely scratches the surface of interest groups vying to impact policy. To illustrate the scope of such groups, the Encyclopedia of Associations lists 22,200 U.S. national organizations; 22,300 international organizations; and 115,000 regional, state and local organizations. (Note that under an expansive reading of this definition, some Federal agencies such as the Department of Veterans Affairs and Office of National Drug Control Policy could be considered interest groups—and these executive branch organizations’ websites are listed on the About.com website. This paper does not consider government agencies as interest groups.)

Interest groups obviously vary significantly in terms of size, focus, influence, and name recognition. On one end of the spectrum is Asian Pacific Americans for Progress (APAP), a little-known, liberal-leaning group based on the U.S. west coast. In May of 2007, this group hosted a conference call with Elizabeth Edwards, wife of presidential candidate John Edwards. For 30 minutes, she took questions from 65 call-in sites—mostly people’s homes. APAP, begun in 2004 to support candidate Howard Dean, claims no more than 7,500 members nationwide.

At the other end of the spectrum reside well-known groups such as the American Association of Retired Persons (AARP). A visit to the AARP website shows they are open to anyone over 50 years old and claim over 37 million members. The organization is well known for their advocacy on behalf of seniors for affordable prescription drugs and protection of Social Security or Medicare from changes that would decrease benefit payments to seniors. Their other interests are wide-ranging, from homeowner insurance to the Taxpayer Bill of Rights to telecom deregulation and liability issues for volunteer drivers.

Neither of these groups is primarily interested in or directly related to foreign policy. However, virtually all interest groups play at least an indirect role in the foreign policy process. For example, the national security professional might see the greatest impact of AARP in their tenacious defense of spending in the Social Security and Medicare accounts. Foreign policy funding of all types competes with other spending in the budget process. Thus, any argument for resource growth for the DoD or the State Department will require either a tax increase or a reduction in other government spending (or both). The case for discretionary spending growth is problematic, as AARP (among others) stands ready to mobilize 37 million seniors to oppose any resulting spending reductions or tax increases.

A significant majority of the American public agrees with the statement, “Congress is too heavily influenced by interest groups.” While political scientists across the spectrum cannot
agree on the extent of interest group influence over the Congress, they uniformly reject “as crude
and exaggerated” the public view of an interest group stranglehold on Congress. At the same
time, the American system of government has several facets that tend to increase the influence of
interest groups when compared to other forms of government. Perhaps most importantly, the First
Amendment to the Constitution guarantees the right of American individuals or groups to be heard
through freedoms of the press, speech and assembly. The diffusion of power in the American political
system also serves to increase the power of interest groups. The separation of powers into three
branches enhances the influence of interest groups by preventing excessive accumulation of powers
in any single branch. Further diluting the centralization of power is the concept of Federalism, or
reserving power to the states that is not explicitly granted to the Federal government. Furthermore,
the limited power of any single political party in the American system tends to raise the relative
influence of all actors in the system. Finally, the independent judiciary gives interest groups a route
of appeal when legislative or executive actions stifle minority rights or harm group interests.

Interest groups play important roles in representative government. They tend to organize either
around broad public policy issues or narrowly focused issues. Organizing is easier for small groups
that share a significant stake in a given issue. Because of its small size, the impact of any policy
change will be more keenly felt, meaning individual motivation and energy are easier to come by
and maintain as the interest group advances its agenda. With small size, however, usually comes
small influence. The amount of time and energy involved in organizing a large public policy interest
group is more extensive. Likewise, the potential impact of any given policy will be more diluted as
it reaches across a larger population, meaning the individual motivation and energy level is more
difficult to sustain. At the same time, the influence of a large group is likely to be greater than of
a small group, since larger membership represents a larger constituency, and generally, access to a
greater pool of resources. Interest groups formed to represent other groups (e.g. business groups,
labor organizations, associations of like-minded groups) have similar dynamics.

An example of interest group engagement in governance is the effort to bring greater
transparency to the Congressional practice of earmarking. Earmarks are specific appropriations
inserted into legislation by a single Member of Congress that benefits his or her state or district.
Referring to earmarks, the President of Americans for Tax Reform stated, “Transparency is the
next big thing.” A Wall Street Journal article asserts that this trend has accelerated at the state
level—Kansas, Minnesota and Texas are among 19 states that have passed or are considering laws
mandating public transparency of government spending. In the 2006 election cycle, Congressional
democrats campaigned on bringing greater transparency to earmarks. Legislative progress on the
issue has been spotty, however, as some 32,000 earmark requests are working their way through the
2007 legislative session.

In addition to their efforts to implement change, interest groups’ expertise can be an important
asset to Members of Congress, the Executive branch and the Judiciary. The arcane and technical
aspects of much of American business, agricultural and scientific life, for example, are generally
outside the experience and expertise of Members and their staffs. Interest groups step forward to
fill the void, educating Members and theoretically helping to improve the final legislative product.
Members frequently reach out to those interest groups with which they have established trusted
relationships. According to research from as far back as the 1960’s, these relationships may form
the basis for much of the sway interest groups have over policy. Clearly, relationships continue to
matter.

At the individual level, interest groups often hire lobbyists to represent their views to the
government. As lobbyists work to educate Members, they, and the interest groups that employ them
can become sources of financial support Members can tap for campaign expenses. The image of a
congressman receiving money from a lobbyist gets to the heart of the public’s troubled perceptions. In many cases, however, the public perception is misguided, as the greater power in the relationship often belongs to the Member. As needy as each Member of Congress is for campaign funds, the universe of available lobbyists with funds is so large that Members can afford to be somewhat choosy. This inverts the relationship, forcing lobbyists to compete and to bring value beyond their money to the table. While not dependent on interest group money, members of the President’s administration are also recipients of interest group lobbying. This lobbying attempts to steer Federal policymaking as well as the content of legislation the administration may propose to Congress. Finally, interest groups can also directly lobby the administration to threaten a Presidential veto of legislation.

In addition to hiring lobbyists, interest groups also can form Political Action Committees (PACs) to collect and disburse money on behalf of political candidates or specific issues. PACs are limited to accepting no more than $5,000 from an individual, political party committee or other PAC within any given calendar year. PACs may give no more than $5,000 to any candidate’s reelection committee or more than $15,000 to any national party committee annually. These PACs serve as conduits for the ‘soft money’ that has replaced direct contributions to candidates over the years. As Congress tightened campaign contribution laws in an effort to head off ethics crises and the worsening of public perception, limits on these direct contributions, known as ‘hard money’ weakened their overall impact. PACs and soft money emerged out of the resulting political environment, and efforts to control or limit PACs have suffered from limited Congressional enthusiasm as well as Constitutional issues regarding limiting free speech.

When working to influence policy, interest groups can adopt an inside strategy, an outside strategy, or some combination of the two. Inside strategies focus their efforts on influencing change from inside the organization. This strategy requires connections with centers of power and influence inside the organization, which will then change the direction of the whole institution. Lobbying is an example of an inside strategy, wherein an interest group pays an individual or lobbying firm to communicate directly with select Members of Congress in order to influence their votes on a piece of legislation or more broadly across a range of bills impacting their interests. An inside strategy is the most direct approach and when correctly planned and executed, is more effective than an outside strategy. An inside strategy also has the possibility of being executed with less public scrutiny than an outside strategy. Ultimately, however, an inside strategy requires access to resources such as money, a substantial membership list or perhaps established relationships that facilitate access. Without such resources, interest groups have little hope of effectively working inside the organization.

An outside strategy attempts to bring external pressure on the organization. The use of public pressure, shame, protest actions and civil disobedience are samples of tools of an outside strategy. The appeal of the outside strategy is that is does not necessarily require large sums of money, a large membership or any direct connection at all to the target organization. Before the advent of the Internet, the media was a primary tool of the outside strategy, especially for resource-poor groups. Groups such as Earth First—an environmental action group known to use protest actions to garner media attention—hope to receive free publicity through news coverage. Just as terrorists attempt to communicate to their target audience via media coverage of their attacks, some interest groups create disruptions to garner public attention to their interests. Fortunately, these groups are a tiny minority, and a more common outside strategy is a simple media campaign that relies on repetition and a wide reach of press releases and ‘talking head’ opportunities to get the message out. This is one avenue where PACs excel. Their large monetary resources, limited in terms of direct contributions to favored candidates, are available for wide ranging media campaigns on behalf of
both candidates and issues. Additionally, a University of Michigan study concluded that a media-based outside strategy is generally only effective for those groups with enough resources to also attempt an inside strategy. It appears that in addition to relationships, size also matters.

While PAC money buys expensive media campaigns, the increasing ubiquity of the Internet has dramatically reduced the cost of Internet-based campaigns. With the lowered financial bar to entry comes a vastly more congested public space, in which it becomes ever more difficult to make a message stand out. It is clear that both large national interest groups and narrowly focused groups can now mobilize their members with little resource outlay. At the same time, the media still plays an enormous role both in political campaigns and in governance.

The Media.

In the absence of a functioning media, much of the foregoing discussion about the national security community would become moot. The Executive branch would make policy, the Legislature would make laws and the Judiciary would continue to interpret them as before. In that case, however, all three branches would be more isolated from the People, and think tanks and interest groups would be hard pressed to generate the influence they enjoy today. The media serves as a conduit energizing the informal connections highlighted elsewhere in this chapter. Complicating the picture is the fact that the media cannot cover these issues without also affecting them, both directly and indirectly. The media impacts the national security environment in many ways. Most importantly, the media serves as a communications channel between the government and the People. It also serves as a democratic watchdog over government, guarding against the inappropriate accumulation and exercise of power. Somewhat less recognized outside of journalistic circles, but arguably no less important, is the media role of framing.

Framing can represent the context within which the media presents information. Given the finite news cycle, how much space or time does any single news item deserve? Editors are always challenged to maximize a story’s accuracy, depth and context while minimizing the time or space allotted. Limiting context, however, affects the framing and ultimately the consumer’s interpretation of the story. For example, is a news item presented with enough context to allow the consumer to distinguish a conspiracy just unmasked from a simple case of human error? Was this news event even out of the ordinary? Framing can also relate to whether or not an item is covered at all. When an editor reaches the limit of a given news cycle’s coverage, any remaining lower-priority stories, according to his sole judgment, are left out—many never to be reconsidered. In choosing not to cover one story, while covering another, the editor has in a small way personally framed the larger public debate. A familiar example in military circles is the media’s perceived predilection to report daily U.S. casualties in Iraq as well as the body count from insurgent attacks. A source of contention for military professionals is the editorial choice to ignore information contained in Coalition press releases documenting progress in security, civil society and basic services. The military professional grouses about the preponderance of negative coverage, while the media editor laments that most press release information, while perhaps valuable to the overall context, simply is not news. This media framing presents the war as a recurring drumbeat of costs paid without also providing the balancing compilation of benefits purchased in part through the efforts and sacrifices of those paying the costs.

In any close observation of the media and the government it is helpful to remember that they share the same ultimate customer—the People. While on the surface, relations between the government and the media frequently appear strained, there are institutional continuities working beneath the surface that make for a symbiotic relationship. These continuities include the media’s ongoing
need for access to information and the government’s need for the means to communicate with the People. While both parties want more control over the relationship, they make extensive use of each other to achieve their objectives. The media exerts pressure on the government to provide greater access to information—in some cases information that the government does not want to release. The government, in turn, devotes resources both to crafting strategies to communicate its message to the People via the media and to responding to media requests for information. In that relationship, both parties hold some power.

The news cycle drives the media’s recurring appetite for information. Theoretically, the government has the power to grant or withhold access. (Notwithstanding the idealized picture of the investigative journalist digging through the system looking for a sympathetic source.) If the government wants to fulfill the media’s request, it generally must do so on the media’s timeline. If it fails to do so, the story may not get the extent of coverage the government desires. Likewise, if the government does not want the story to get wide coverage, delaying a response until after deadline can have that effect. For stories that editors feel have sufficient impact, however, such government delays do no good. In fact, the media can report on the government’s lack of responsiveness, and thereby contribute to heightening public attention to a subsequent story.

When compared with the government-media relationship, the relational dynamic between the media, think tanks and interest groups is somewhat more one-directional. Here, the pull of the media news cycle is enhanced by the push of these groups’ desire to generate media coverage for their ideas. Indeed, it may be more accurate to portray a media responsibility of filtering in this relationship. In today’s fast-paced and crowded news environment, not every think tank or interest group press release or report is worth a slice of finite media coverage, and the media therefore decides what receives coverage and what does not.

The proliferation of Internet websites and satellite/cable television channels containing news and commentary have led to saturation of the media marketplace. Newspaper circulation is declining around the country, and the ability to turn a profit is more problematic. Conventional wisdom asserts that pursuing high quality journalism costs additional resources, and these added resources detract from the profit margin of a news organization. With shareholders always looking over the shoulder, the pressure for profits frequently leads to cost-cutting measures, which in turn degrade the quality of in-depth reporting. The Chairman of the Tribune Company, Jack Fuller, spoke on the tension between business and journalistic priorities:

. . . those of us who put out newspapers are important . . . participants in the system of public governance. If we take that seriously, as we should, our jobs as leaders of newspaper enterprises is to find the sweet spot where we can fulfill both our fiduciary obligation to the shareholders and our social obligation to provide communities the kind of information they need in order for people to make their sovereign choices wisely.

To determine if objective measures of newspaper quality are available, Koang-Hyub Kim and Philip Meyer began by reviewing a study published in 1989 by Leo Bogart. In his conclusions, Bogart declared that indicators such as accuracy, civic-mindedness and impartiality in reporting were too subjective to be measured. What Kim and Meyer went on to find, however, was that for seven quality indicators they isolated, quality was indeed directly related to profitability. (Higher quality led to higher profits.) But they noted, “Quality journalism, in the minds of some, is more cost than gain.” Perhaps more ominously for newspapers in general, the researchers’ final conclusion was that those focused on cutting costs were achieving short-term gains while masking the long-term costs in terms of reduced readership as quality inevitably suffers. How does this phenomenon affect the national security community? As pressures build on newspapers, and media more generally, to generate additional profits to justify stock price increases,
the time, effort and resources devoted to news collection and quality reporting will likely decline. Reporting may depend more and more on inside sources cuing reporters to evolving issues. Perhaps the various interrelationships in the community will become more complicated as the Internet opens up ever wider spaces for individuals and groups for report news, leak information or opine on the issues of the day. The Internet will certainly increase the relative power of any connected, enterprising individual. It remains to be seen if it will lead to more in-depth, quality reporting.

Conclusion.

While the Executive branch bears the primary burden for national security policy, it functions in an environment with other actors clamoring for influence. The Congress wields significant sway in policy debates. In a movement gaining momentum over many years, think tanks have greatly increased in number. While their direct influence remains difficult to measure, there is little contention over the idea that their influence continues to grow. Metaphorically elbowing their way onto the stage are interest groups, large and small, that sometimes bring access to tremendous resources—resources that are important to the Congress for the almost-perpetual campaigning required. Providing much of the discussion space for each of these parties to interact is the media. The national security community is a morass of intersecting relationships of feedback and accountability. Whether forecasting the second-order effects of a policy proposal or attempting to shepherd policy changes through the process, the national security professional needs to remain attuned to the many players involved, and to choose his sources wisely.

CHAPTER 3
NATIONAL SECURITY AND THE INTERAGENCY PROCESS

Gabriel Marcella

Power is the capacity to direct the decisions and actions of others. Power derives from strength and will. Strength comes from the transformation of resources into capabilities. Will infuses objectives with resolve. Strategy marshals capabilities and brings them to bear with precision. Statecraft seeks through strategy to magnify the mass, relevance, impact, and irresistibility of power. It guides the ways the state deploys and applies its power abroad. These ways embrace the arts of war, espionage, and diplomacy. The practitioners of these three arts are the paladins of statecraft.

Chas W. Freeman, Jr.

The United States is a fully equipped, globally deployed, interagency superpower. It is the indispensable anchor of international order and the increasingly globalized economic system. Nothing quite like it has ever existed. Indeed such great powers as Rome, Byzantium, China, Spain, England, and France achieved extraordinary sophistication, enormous institutional and cultural influence, and longevity, but they never achieved the full articulation of America’s global reach.

Today the United States forward deploys some 250 diplomatic missions in the form of embassies, consulates, and membership in specialized organizations. It possesses a unified military command system that covers all regions of the world, the homeland, and even outer space. It is the leader of an interlocking set of alliances and agreements that promotes peace, open trade, the principles of democracy, human rights, and protection of the environment. American capital, technology, and culture influence the globe. American power and influence is pervasive and multidimensional. All the instruments of national power are deployed. Yet the challenge of strategic integration, of bringing the instruments into coherent effectiveness, remains. Presidents and their national security staffs strive to achieve coherence, with varying levels of success through use of the “interagency process.”

The interagency decision making process is uniquely American in character, size, and complexity. Given ever expanding responsibilities and the competition for resources, it is imperative that national security professionals master it in order to work effectively within it. The complex challenges to national security in the 21st century will require intelligent integration of resources and unity of effort within the government. It is also imperative that changes be made to make the system and the process more effective.

The United States first faced the challenge of strategic integration in an embryonic interagency process during World War II. Mobilizing the nation, the government, and the armed forces for war and winning the peace highlighted the importance of resources and budgets, of integrating diplomacy with military power, gathering and analyzing enormous quantities of intelligence, conducting joint and combined military operations, and managing coalition strategies and balancing competing regional priorities, for example, the European versus the Pacific theater in national strategy. From the war and the onset of the Cold War emerged a number of institutional and policy innovations. Among them: the structure of the modern Department of State, Department of Defense (DoD) (from the old War and Navy Departments), a centralized intelligence system, the Marshall Plan for the reconstruction of Europe, the unified military command system, the Air Force, the predecessor of the U.S. Agency for International Development (Point Four), NATO and other alliances, military assistance pacts, military advisory groups, and the U.S. Information Agency.
There is probably no period in American history like the late 1940s and early 1950s that demonstrates the kind of national and institutional learning that John P. Lovell calls “purposeful adaptation.” He defines it as “the need to develop and pursue foreign policy goals that are sensitive to national needs and aspirations and to the realities of a changing world environment.” The evolution of the interagency process parallels America’s purposeful adaptation to changing global realities of the last five decades. But it is not an orderly evolution because of serious structural and cultural impediments, such as discontinuities from one administration to another and poor institutional memory. Prominent historical markers along the path of learning and adaptation included such documents as National Security Council (NSC) 68, the intellectual framework for the containment strategy against the Soviet Union. Though not a policy document, the Weinberger Doctrine articulated criteria for the use of military power that dramatically influenced the shape of American strategy in the 1980s and 1990s.

There are countless examples of how American statesmen codify in writing the patterns of “purposeful adaptation.” The tragic events of September 11, 2001, had such an impact on American national security that the George W. Bush administration created a Department for Homeland Security. It also published a series of strategy documents on counterterrorism, homeland security, military strategy, and infrastructure security. Bush’s National Security Strategy (NSS) dramatically redefined the philosophical underpinnings of the U.S. role in the world. Because the attacks of September 11, 2001, represented an assault on international order and exposed the vulnerabilities of the United States to asymmetric warfare by non-state actors, the NSS of September 17, 2002, spoke of the need to redefine the Westphalian concept of sovereignty for the purpose of reestablishing order and security in the international system.

When the United States reluctantly inherited global responsibilities in 1945, American statesmen faced three challenges: forging a system of collective security, promoting decolonization, and building a stable international financial order. These and 4 decades of intense threat from the other superpower had a decisive impact on shaping the interagency process. With the end of bipolar ideological and geopolitical conflict, the foreign policy and defense agenda was captured by free trade, democratization, sub-national ethnic and religious conflict, failing states, humanitarian contingencies, ecological deterioration, terrorism, international organized crime, drug trafficking, and the proliferation of the technology of weapons of mass destruction (WMD). The dawn of the 21st century calls for a relook at the adequacy of the interagency system, not only because of the changing agenda but also because of the nature and extent of the global responsibilities the United States has taken on.

The National Security Council: The Permanent Tension between Coordination vs. Policymaking.

To bring strategic coherence, consensus, and decisiveness to the burgeoning global responsibilities of the emerging superpower, the National Security Act of 1947 created the National Security Council. Its functions:

The function of the Council shall be to advise the President with respect to the integration of domestic, foreign, and military policies relating to the national security so as to enable the military services and the other departments and agencies of the Government to cooperate more effectively in matters involving the national security.

. . . other functions the President may direct for the purpose of more effectively coordinating the policies and functions of the departments and agencies of the Government relating to the nation’s security . . .
... assess and appraise the objectives, commitments, and risks of the United States ...

... consider policies on matters of common interest to the departments and agencies of the Government concerned with the national security.

The statutory members are the President, the Vice President, and the Secretaries of State and Defense. By statute, the Director of Central Intelligence and the Chairman of the Joint Chiefs of Staff are advisors. Other advisors, including additional cabinet members such as the Secretary of the Treasury, may be invited. The President chairs the meeting; but the Council need not convene formally to function. Formal NSC meetings are rare. Indeed, by late 1999 the Clinton NSC had met only once: March 2, 1993. There are alternatives to formal meetings, such as the ABC luncheons of Secretary of State Madeleine Albright, Secretary of Defense William Cohen, and Sandy Berger, Assistant to the President for National Security Affairs, or the Deputies breakfasts and lunches. The President himself may at any time meet informally with members of his cabinet. In recent years, tele-video conferencing facilitates such senior level consultations.

The “NSC system” of policy coordination and integration across the departments and agencies operates 24 hours a day. The Assistant to the President for National Security Affairs directs the staff. The emergence of the modern “operational presidency,”6 brought to the NSC greater authority over the development and implementation of policy, thus creating a new power center that competes for jurisdiction with the Departments of State and Defense.

The NSC staff, known as the Executive Secretariat, has varied in size and function. In 1999 the staff comprised about 208 (of which 101 were policy personnel and 107 administrative and support personnel) professionals covering regional and functional responsibilities. Under the George W. Bush administration, the NSC staff was cut to nearly half. Staffers are detailed from the diplomatic corps, the intelligence community, the civil service, the military services (12 military officers were in policy positions in September 1999), academia, and the private sector. The staffing procedures are personalized to the president’s style and comfort level. The structure of the staff, its internal and external functioning, and the degree of control of policy by the president varies. Carter and Clinton were very centralized, Reagan and George Bush, senior, less so. As examples, the first two Presidential Decision Directives of the Clinton administration, dated January 20, 1993, set forth the structure and function of the NSC staff and groups that reported to it, as depicted in Figure 1.
The day-to-day policy coordination and integration was done by the NSC Staff, divided into the functional and geographic directorates depicted in Figure 2.

Figure 2. Clinton’s National Security Council Staff.
The Principals Committee members were the cabinet level representatives who comprised the senior forum for national security issues. The Deputies Committee included deputy secretary level officials who monitored the work of the interagency process, did crisis management, and when necessary, pushed unresolved issues to the principals for resolution. Interagency Working Groups (IWGs) were the heart and soul of the process. They were ad hoc, standing, regional, or functional. They functioned at a number of levels, met regularly to assess routine and crisis issues, framed policy responses, and built consensus across the government for unified action. The fluid nature of the process meant that IWGs did not always have to come to decisions. The system preferred that issues be decided at the lowest level possible. If issues were not resolved there, they were elevated to the next level and when appropriate, to the Deputies Committee. Who chaired the different IWGs and committees varied between the NSC director and senior State Department officials.

Dramatic changes came with the election of George W. Bush. Comfortable with a corporate style of executive leadership and surrounding himself with very experienced national security statesmen like Secretary of State Colin Powell (former Chairman of the Joint Chiefs of Staff, Assistant to the President for National Security Affairs, and White House Fellow), Vice President Richard Cheney (former Congressman, Secretary of Defense, and White House Chief of Staff), and Defense Secretary Donald Rumsfeld (former Secretary of Defense, Ambassador to NATO, and Congressman), President George W. Bush centralized policy authority by establishing new structures and procedures. 7

The process began with new nomenclature for presidential directives. National Security Presidential Directive 1 (NSPD1), dated February 13, 2001, established six regional Policy Coordinating Committees (PCCs) and 11 (later 15) PCCs to handle functional responsibilities.8 In 2005 they were:

Regional PCCs:
- Europe
- Western Hemisphere
- East Asia
- South Asia
- Near East and North Africa
- Africa

Functional PCCs (with department responsible in parentheses):
- Democracy, Human Rights, and International Operations (NSC)
- International Development and Humanitarian Assistance (State)
- Global Environment (NSC and National Economic Council)
- International Finance (Treasury)
- Transnational Economic Issues (NEC)
- Counter-Terrorism and National Preparedness (NSC)
- Defense Strategy, Force Structure, and Planning (Defense)
- Arms Control (NSC)
- Intelligence and Counterintelligence (NSC)
- Records Access and Information Security (NSC)
- International Organized Crime (NSC)
- Contingency Planning (NSC)
- Space (NSC)
- HIV/AIDS and Infectious Diseases (state and Health and Human Services)

(See Figure 3.)
The plethora of existing IWGs was abolished by NSPD1. The activities of IWGs were transferred to the new PCCs. The PCCs were the most important structural changes made by the Bush Administration. According to NSPD1, they were the “Day-to-day fora for interagency coordination of national security policy. They shall provide policy analysis for consideration by the more senior committees of the NSC system and ensure timely responses to decisions made by the president.” The centralization of authority over national security matters reached levels not seen for many years. However, it remained to be seen whether the system would work effectively. In Spring 2003, a senior national security careerist who was intimately involved with policymaking referred to interagency relations as “the worst in 20 years.” An experienced foreign policy hand commented: “The interagency system is broken” and averred that instead of centralization of authority, there is fragmentation.9 Explanations for this state of affairs varied. They included the intrusion of group think dynamics among senior neo-conservative decisionmakers, the role of strong personalities, the bypassing of the Assistant to the President for National Security Affairs, Condolezza Rice, as well as the deliberate isolation of the Department of State.10

Another important interagency reorganization made by the Bush administration was the creation of the Department of Homeland Security (DHS), and a unified military command, the Northern Command. The creation of DHS involved the transfer of responsibilities, people, and resources from existing agencies and departments to a new entity. DHS has over 170,000 employees and an anticipated budget of 40 billion dollars. It constitutes the largest reorganization of the U.S. Government since the creation of the Defense Department. DHS combined 22 agencies “specializing in various disciplines,” such as: law enforcement, border security, immigration, biological research, computer security, transportation security, disaster mitigation, and port security.11 Though it is a national security department it will not be involved in power projection, a crucial difference with the Defense Department. Yet, it will use many skills and resources that reside across the agencies: military, diplomatic, law enforcement, intelligence, and logistics. Homeland security also involves the concept of federalism, whereby some 87,000 state and local jurisdictions share power with federal institutions. The challenge of integrating federalism injects into national security planning will be immense.

Policy is often made in different and subtle ways. Anthony Lake, writing in *Somoza Falling: The Nicaraguan Dilemma, A Portrait of Washington At Work*, discusses how the answer to an important
letter can help set policy. Hence the importance of interagency coordination and the importance of
being the one (bureau, office, agency) that drafts it. “. . . policy flows as much from work on specific
items—like the letter from Perez [to Carter]—as it does from the large, formal interagency ‘policy
reviews’ that result in presidential pronouncements.”12 Each action is precedent for future actions.
Speeches, press conferences, VIP visits, and presidential travels are important. Lake elaborates
“Policy is made on the fly; it emerges from the pattern of specific decisions. Its wisdom is decided
depend on whether you have some vision of what you want, a conceptual thread as you go along.”13

The NSC staff does the daily and long-term coordination and integration of foreign policy and
national security matters across the vast government. Specifically, it:

- Provides information and policy advice to the President.
- Manages the policy coordination process.
- Monitors implementation of presidential policy decisions.
- Manages crises.
- Articulates the President’s policies.
- Undertakes long term strategic planning.
- Conducts liaison with Congress and foreign governments.
- Coordinates summit meetings and national security related trips.

There is a natural tension between the policy coordination function of the NSC and policymaking.
Jimmy Carter’s Director of Latin American Affairs at the NSC, Robert Pastor, argues that:

. . . tension between NSC and State derives in part from the former’s control of the agenda and the latter’s
control of implementation. State Department officials tend to be anxious about the NSC usurping policy, and
the NSC tends to be concerned that State either might not implement the President’s decisions or might do so
in a way that would make decisions State disapproved of appear ineffective and wrong.14

The NSC staff is ideally a coordinating body, but it oscillates between the poles, taking policy
control over some issues while allowing State or Defense to be the lead agency on most national
security and foreign policy issues. On some key issues, such as the Kosovo crisis of 1998-99, the NSC
staff may take over policy control from State. Similarly, policy towards Cuba and Haiti in 1993-95
was handled directly out of the White House because of the deeply-rooted domestic dimension of
those issues. In virtually all cases, however, major policy must be cleared through the NSC staff and
the National Security Advisor. This process of clearing makes the NSC staff a key element in the
policymaking process. In general, the clearance process involves a review by the appropriate NSC
staff director to assure that the new policy initiative is consistent with the president’s overall policy
in that functional or regional area, that it has been coordinated with all appropriate departments
and agencies, and that all obvious political risks associated with the new initiative have been
identified and assessed. This process makes all the relevant departments stakeholders in the final
policy statement. The Oliver North Iran-Contra caper created an autonomous operational entity in
the NSC staff. But that was an aberration that does not invalidate the general rule. The salient point
is that proximity to the president gives the NSC staff significant policy clout in the interagency
process. Such clout must be used sparingly lest it cause resentment and resistance or overlook the
policy wisdom and skills available elsewhere in the executive departments.

Toward a Theory of the Interagency Process: How Does the President Mobilize
the Government?

The interagency is not a place. It is a process involving human beings and complex organizations
with different cultures, and different outlooks on what’s good for the national interest and the
best policy to pursue—all driven by the compulsion to defend and expand turf. The process is political (therefore conflictual) because at stake is power, personal, institutional, or party. The “power game” involves the push and pull of negotiation, the guarding of policy prerogatives, the hammering out of compromises, and the normal human and institutional propensity to resist change.15 Regardless of the style of the president and the structures developed for the management of national security policy, the interagency process performs the same basic functions: identifies policy issues and questions, formulates options, raises issues to the appropriate level for decisions, makes decisions where appropriate, and oversees the implementation of decisions throughout the executive departments.

It is helpful to view policy at five interrelated levels: conceptualization, articulation, budgeting, implementation, and post-implementation analysis and feedback. Conceptualization involves the intellectual task of policy development, such as a presidential directive. Articulation is the public declaration of policy that the president or subordinates make. It is critical in a democracy in order to engage public support.

Budgeting involves testimony and the give and take before Congress and its various committees to justify policy goals and to request funding. Implementation is the programmed application of resources in the field in order to achieve the policy objectives. Post-implementation analysis and feedback is a continuous effort to assess the effectiveness of policy and to make appropriate adjustments. It is conducted by all the agencies in the field. The General Accounting Office of the Congress makes extensive evaluations of the effectiveness of policy implementation. Congressional hearings and visits in the field by congressional delegations and staffers also make evaluations that help refine policy.

The ideal system (see Figure 4) would have perfect goal setting, complete and accurate intelligence, comprehensive analysis and selection of the best options, clear articulation of policy and its rationale, effective execution, thorough and continuous assessment of the effects, and perfect learning from experience and the ability to recall relevant experience and information.

Such perfection is impossible. The reality is shown in Figure 5.
Effective policy requires control, resources, and a system of accountability. The most compelling challenge for the executive is to retain policy control. Since presidents do not have the time or expertise to oversee policymaking in detail (though Jimmy Carter tried), they delegate responsibility. But “nobody is in charge” is an often-heard refrain of the interagency process. By delegating responsibility, control becomes more diffused and the policy effort diluted. Moreover, the quest for resources brings in another stakeholder. Congress has the constitutional responsibility to scrutinize policy initiatives and vote monies for foreign affairs and national defense. By then, a literal Pandora’s box of players and expectations is opened. The numerous congressional committees and their staffs have enormous impact on national security and foreign policy.

The president begins to mobilize his government immediately upon election. A transition team works closely with the outgoing administration for the purpose of continuity. He begins nominating his cabinet, which must then be confirmed by the Senate. Some 6,000 presidential level appointees will fill the sub-cabinet positions, staff the White House and the NSC, take up ambassadorships (serving ambassadors traditionally submit their resignation when the occupant of the White House changes), as well as second, third, and fourth level positions in the executive departments. The purpose of these nominations is to gain control and establish accountability to the president and his agenda. In his first administration, President William Clinton faced serious difficulties because he never finished staffing his government.

Thus there is a high turnover and the injection of new talent, at times inexperienced and equipped with new predispositions about national security, at the top echelons of American government every time the part that controls the White House changes. Continuity of government resides in the nonpartisan professionals (neutral competence) of the federal civil service, the diplomatic service,
the military, and the intelligence community. The transition to a new administration is a period of great anticipation about the direction of policy. Consequently, the entire interagency produces transition papers to assist and inform the newcomers, and to also protect the institutional interests of the various departments from unfriendly encroachment.

The first months of a new administration are a period of learning. Newly appointed people must familiarize themselves with the structure and process of policymaking. This necessity invariably leads to a trial-and-error atmosphere. In anticipation of the passing of the mantle, think tanks and the foreign policy and defense communities prepare for the transition by writing papers recommending the rationale for policy. These will inform the new administration about the central commitments of U.S. policy and provide opportunities for departments and agencies to define institutional turf and stake a claim to resources. The administration itself will also mandate policy reviews that eventually produce new guidance for policy.

Making speeches and declaring policy and doctrines is another way for the president to mobilize the government. The State of the Union message is one of the preeminent sources of presidential activism that engages the interagency. The congressionally mandated National Security Strategy (NSS) document, which bears the president’s signature and is supposed to be produced annually, is eagerly awaited, though not with equal intensity across departments, as an indicator of an administration’s direction in national security and foreign policy.

The NSS is eagerly awaited for another reason; it is the best example of “purposeful adaptation” by the American government to changing global realities and responsibilities. It expresses strategic vision, what the United States stands for in the world, its priorities, and a sensing of how the instruments of national power, the diplomatic, economic, and military will be arrayed. Since it is truly an interagency product, the NSS also serves to discipline the interagency system to understand the president’s agenda and priorities and to develop a common language that gives coherence to policy. It is also more than a strategic document. It is political because it is designed to enhance presidential authority in order to mobilize the nation. Finally, the NSS tends to document rather than drive policy initiatives. This is especially true in election years.

The first NSS in 1987 focused on the Soviet threat. The Bush administration expanded it by including more regional strategies, economic policy, arms control, and transnational issues and the environment. The Clinton document of 1994 proposed “engagement and enlargement,” promoting democracy, economic prosperity, and security through strength. The 1995 version added criteria on when and how military forces would be used. By 1997, the integrating concepts of “shape,” “prepare,” and “respond” for the national military strategy came into prominence. To the core objectives of enhancing security, and promoting prosperity and democracy, were added fighting terrorism, international crime and drug trafficking, along with managing the international financial crisis. Homeland defense against the threat of mass casualty attacks and regional strategies completed the agenda.

Another instrument is the presidential national security directives process. Administrations have titled these documents differently, and they have produced them in greater or lesser quantity. The two Clinton administrations produced at least 73 Presidential Decision Directives and the George W. Bush administration issued 44 National Security Presidential Directives by December 2005. Other administrations’ totals and titles are as follows: George H. W. Bush 79 National Security Decision Directives, Reagan 325 National Security Decision Memoranda, Carter 63 Presidential Directives, Nixon-Ford 348 National Security Decision Memoranda and Kennedy-Johnson 372 National Security Action Memoranda. Each administration will try to put its own stamp on national security and foreign policy, though there is great continuity with previous administrations. Whereas Reagan emphasized restoring the preeminence of American military power and rolling back the “evil empire,”
Clinton focused on strengthening the American economy, open trade, democratization, conflict resolution, humanitarian assistance, fighting drug trafficking and consumption, counterterrorism and non-proliferation. September 11, 2001, imposed a national defense priority on the George W. Bush administration. In response, the Bush administration—in addition to the NSPDs mentioned above—created a new category of Homeland Security Presidential Directives (HSPD). Some policy documents serve jointly as NSPDs and HSPDs. For example, NSPD 43 on Domestic Nuclear Detection is also HSPD 14.18

Presidential national security directives are macro level documents, often classified, that take much deliberate planning to develop. They result from intensive interaction among the agencies. The process begins with a presidential directive to review policy that tasks the relevant agencies to develop a new policy based on broad guidance. For example, Clinton’s PDD 14 for counternarcotics emphasized greater balance between supply and demand strategies. Because of the many constraints placed on the use of economic and military assistance to fight the “war on drugs” and to help Colombia, PDD 14 evolved into the Colombia-specific PDD 73. This, in turn, was superseded in the Bush administration by NSPD 18, which, thanks to September 11, 2001, and the terrorism in Colombia, went further and provided support for both counter-narcotics and counterterrorism activities in Colombia. The evolution of these policy documents over nearly ten years nurtured the growth of significant institutional memory in the interagency with respect to the Colombian conflict.

The learning went both ways because Colombian officials had to adapt to the Washington policy process. Because of the global reach of American power and influence, such adaptation is becoming more common. Clinton’s celebrated PDD 25 set down an elaborate set of guidelines for U.S. involvement in peace operations. It became so effective as a planning device that the United Nations adopted it in modified form for planning its own peace operations, an excellent example of the international transfer of American purposeful adaptation. Other nations also used the terminology and organizing principles for their strategic and operational planning in multilateral peacekeeping.

Another instructive example is the Latin American policy PDD 21. Effective on December 27, 1993, it emphasized democracy promotion and free trade. It was addressed to more than twenty departments and agencies: Vice President, Secretary of State, Secretary of the Treasury, Secretary of Defense, Attorney General, Secretary of Commerce, Secretary of Labor, Director of the Office of Management and Budget, U.S. Trade Representative, Representative of the United States to the United Nations, Chief of Staff to the President, Assistant to the President for National Security Affairs, Director of Central Intelligence, Chair of the Council of Economic Advisors, Assistant to the President for National Economic Policy, Chairman of the Joint Chiefs of Staff, Administrator of the Agency for International Development, Director of the Arms Control and Disarmament Agency, Administrator of the Environmental Protection Agency, and Director of the U.S. Information Agency.

The point of listing departments and agencies is to identify the interagency stakeholders in regional policy, though the size of the stake will vary greatly among them according to the particular issue. The stakeholders are related by functional interdependence; they have different resources, personnel, and expertise that must be integrated for policy to be effective. It is an iron rule of the interagency that no national security or international affairs issue can be resolved by one agency alone. For example, the DoD needs the diplomatic process that the Department of State masters in order to deploy forces abroad, build coalitions, negotiate solutions to conflict, conduct non-combatant evacuations (NEO) of American citizens caught in difficult circumstances abroad, and administer security assistance. The Department of State in turn depends on the logistical capabilities of the
DoD to deploy personnel and materials abroad during crises, conduct coercive diplomacy, support military-to-military contacts, and give substance to alliances and defense relationships. The Office of National Drug Control Policy, a new cabinet level position, must rely on a range of agencies to reduce the supply abroad and consumption of drugs at home. Finally, all require intelligence input to make sound decisions.

These patterns of functional interdependence, whereby departments stayed within their jurisdictions, began to fray in the George W. Bush administration. Press reports in the spring of 2003 focused on the Bush “policy team at war with itself.” Accordingly, there was a “tectonic shift” of decision making power from the Department of State to Defense because of the strong personalities and neo-conservative ideology of Secretary of Defense Donald Rumsfeld and subordinates, principally Deputy Secretary Paul Wolfowitz. Such a shift is unnatural and will likely correct itself in the future. But the prospect of the DoD dominating foreign policy raised concerns about the effectiveness of policy and the standing of the United States in the world. The inattention to functional interdependence was a contributing factor to the ineffectiveness of postwar reconstruction planning for Iraq in 2003. In October of 2003 President Bush attempted to improve the Iraq reconstruction effort by placing his National Security Advisor, Condoleezza Rice, in charge. The correction allegedly upset Secretary of Defense Donald Rumsfeld. Earlier in the year the President had (via NSPD 24) given authority over the Iraq reconstruction to the Defense Department.

The problems associated with post-conflict reconstruction in Iraq led to an upsurge of recommendations on how to improve the system for the future. For example, the House of Representatives and the Senate proposed the “Winning the Peace Act of 2003,” which would create within the Department of State a permanent office to provide support to the new position of Coordinator of Reconstruction and Stabilization. A comprehensive study published in November 2003 by Hans Binnendijk and Stuart Johnson of the National Defense University advocated major focus on transforming military institutions to perform “stabilization and reconstruction” operations. It also recommended harnessing interagency capabilities via the creation of a rapidly deployable National Interagency Contingency Coordinating Group to meet the need of a national level group to plan and coordinate post-conflict operations. At this juncture it is important to note that in July 2004 the Office of Coordinator of Reconstruction and Stabilization took form in the Department of State under the leadership of Ambassador Carlos Pascual. Yet, one year later the office was still understaffed and under budget, an example of an unfunded mandate. The Congress, which legislated the office and is a stakeholder in national security, by July 2005 had not provided sufficient funding for the Office to do its job properly. By December 2005, as detailed later in this chapter, a new National Security Presidential Directive (44) would give the Department of State the responsibility to manage interagency efforts to conduct reconstruction and stabilization.

Ideally in response to the promulgation of a presidential directive all agencies will energize their staffs and develop the elements that shape the policy programs. But this takes time and seldom creates optimum results, in part because of competing priorities on policymakers, limited time, constrained resources, and congressional input. For example, the Haiti crisis of 1992-94 and congressional passage of the North America Free Trade Act consumed most of the energy of the Clinton administration’s NSC staff and the Bureau of Inter-American Affairs of the Department of State during 1993-94 to the detriment of other Latin American policy. The Central American crisis of the 1980s also crowded out the broader agenda for Latin American policy.

In theory, once the policy elements are put together, they are costed out and submitted to Congress for approval and funding, without which policy is merely words of hopeful expectation. The reality, however, is that a presidential directive is not a permanent guide to the actions of agencies. Rarely is it fully implemented. The culture of the various executive departments will modify how directives
are interpreted. For example, for the military oriented Defense Department, a directive is an order to be carried out. For State, a directive may be interpreted as the general direction a policy should take. Presidential policy can be overtaken by new priorities, new administrations, and by the departure of senior officials who had the stakes, the personal relationships, know how, and institutional memory to make it work. A senior NSC staffer, Navy Captain Joseph Bouchard, Director of Defense Policy and Arms Control, remarked in 1999 that one could not be sure about whether a directive from a previous administration was still in force because the government does not maintain a consolidated list of these documents for security reasons. Moreover, directives and other presidential documents are removed to presidential libraries and the National Archives when administrations change. A senior Defense Department official stated that directives are rarely referred to after they are final, are usually overtaken by events soon after publication, and are rarely updated. In this respect the interagency evaluation of PDD 56’s effectiveness, published in May 1997, is instructive: “PDD 56 no longer has senior level ownership. The Assistant Secretaries, Deputy Assistant Secretaries, and the NSC officials who initiated the document have moved on to new positions.”

The loss of institutional memory is not necessarily fatal. The permanent government retains much of the wisdom for the continuity of policy. That wisdom is always available to an administration. It must learn how to tap it.

**PDD 56: Ephemeral or Purposeful Adaptation?**

It is useful to examine PDD 56 as an example of an interagency product and as a tool intended to influence the very process itself. Directives normally deal with the external world of foreign policy and national security. PDD 56 was radically different, for it went beyond that and attempted to generate a cultural revolution in the way the U.S. Government prepares and organizes to deal with these issues. PDD 56, The Clinton Administration’s Policy on Managing Complex Contingency Operations, was perhaps the mother of all modern Directives. It is a superb example of codifying lessons of “purposeful adaptation” after fitful efforts by American civilian and military officials in the aftermath of problematic interventions in Panama (1989-90), Somalia (1992-94), and Haiti (1994-95). The intent was to institutionalize interagency coordination mechanisms and planning tools to achieve U.S. Government unity of effort in complex contingency operations and in post-conflict reconstruction. It tried to institutionalize five mechanisms and planning tools:

- An Executive Committee chaired by the Deputies Committee (Assistant Secretaries)
- An integrated, interagency Political-Military Implementation Plan
- Interagency Rehearsal
- Interagency After-Action Review
- Training.

The philosophy behind the document was that interagency planning could make or break an operation. Moreover, early involvement in planning could accelerate contributions from civilian agencies that are often excluded from or are culturally averse to strategic and operational planning. An excellent Handbook for Interagency Management of Complex Contingency Operations issued in August 1998, contains in easily digestible form much wisdom about how to do it right. PDD 56 was applied extensively and adapted to new contingencies, such as Eastern Slavonia (1995-98), Bosnia from 1995, Hurricane Mitch in Central America, the Ethiopia-Eritrea conflict since 1998, and the Kosovo contingency of 1998-99. The March 1999 review commented: “PDD 56 is intended to be applied as an integrated package of complementary mechanisms and tools . . . since its issuance in 1997, PDD 56 has not been applied as intended. Three major issues must be addressed to improve the utility of PDD 56.” It recommended:
• Greater authority and leadership to promote PDD 56
• More flexible and less detailed political-military planning
• Dedicated training resources and greater outreach.

Reflected in the three recommendations were the recurring problems of the interagency: the need for decisive authority ("nobody’s in charge"), contrasting approaches and institutional cultures (particularly diplomatic versus military) with respect to planning, and the lack of incentives across the government to create professionals expert in interagency work. PDD 56 was a noble effort to promote greater effectiveness. It may bear fruit if its philosophy of integrated planning and outreach to the interagency takes root. In late 1999 the PDD 56 planning requirement was embedded as an annex to contingency plans. Bush’s February 2001 NSPD1 tried to provide some life support to PDD56 by stating: “The oversight of ongoing operations assigned in PDD/NSC-56 . . . will be performed by the appropriate . . . PCCs, which may create subordinate working groups to provide coordination for ongoing operations.” The failures in post-conflict planning and reconstruction for Iraq in 2003 underlined the importance of taking PDD-56 seriously. Fortunately, as mentioned above, there are enough people in government who retain the expertise and who can be tapped as necessary. Much of the wisdom contained in PDD56 and its Handbook is invaluable in the business of post-conflict reconstruction and stabilization.

As the result of the purposeful adaptation engendered by the mistakes made in the reconstruction and stabilization of Iraq, the Bush Administration promulgated National Security Presidential Directive 44, on December 7, 2005: “Management of Interagency Efforts Concerning Reconstruction and Stabilization.” It speaks eloquently of the need for a coordinated U.S. government effort for harmonizing interagency responses across the spectrum of conflict: complex contingencies, peacekeeping, failed and failing states, political transitions, and other military interventions. NSPD 44 states:

The Secretary of State shall coordinate and lead integrated United States Government efforts, involving all U.S. Departments and Agencies with relevant capabilities, to prepare, plan for, and conduct stabilization and reconstruction activities. The Secretary of State shall coordinate such efforts with the Secretary of Defense to ensure harmonization with any planned or ongoing U.S. military operations across the spectrum of conflict. Support relationships among elements of the United States Government will depend on the particular situation being addressed.26

To this point we have discussed the national strategic level of the interagency process, that is, what occurs in Washington. Actually, the interagency process spans three levels: the national strategic, the operational, and the tactical. In the field, policy is implemented by ambassadors and their country teams, often working with the regional combatant commanders (COCOMs) if the issue is principally security or political-military in nature. Ambassadors and combatant commanders are not only implementers, they frequently shape policy via their reporting to Washington through
a continuous flow of cables, after action reports, and proposals for new policy initiatives, as well as direct consultations in Washington with senior officials and members of Congress. They also comment on how to shape policy initiatives that originate from Washington.

There is a permanent conversation between the embassy and the respective regional bureau in Washington, which includes a broad distribution of the cable traffic to such agencies as the White House, the Defense Department, the regional combatant command, Department of Treasury, Commerce, the Joint Staff, the intelligence community, as well as other organizations, such as the Coast Guard, when there is a “need to know.” The “need to know” almost always includes other embassies in the region, or major embassies in other regions, and even at times, for example, the American Embassy to the Vatican. The ambassador and combatant commander often conduct one-on-one meetings over the multiplicity of security issues.

The embassy country team is a miniature replica of the Washington interagency system. In the country team the rubber proverbially meets the road of interagency implementation. Ambassadors and COMs rely on each other to promote policies that will enhance American interests in a country and region. COMs have large staffs and awesome resources compared to the small staffs and resources of ambassadors. Moreover their functions are different. The ambassador cultivates ties and is a conduit for bilateral communications through the art of diplomatic discourse. He or she promotes understanding of U.S. foreign policy, promotes American culture and business, and is responsible for American citizens in that country. The ambassador is the personal emissary of the President, who signs the ambassador’s formal letter of instruction. The letter charges the ambassador “to exercise full responsibility for the direction, coordination, and supervision of all executive branch officers in (name of country), except for personnel under the command of a U.S. area military commander ...” There is enough ambiguity in the mandate to require both ambassador and COM to use common sense and, in a non-bureaucratic way, work out issues of command and control over U.S. military personnel in the country. In effect control is shared, the ambassador having policy control and the COM control over day-to-day military operations. Thus it is prudent that both work closely together to ensure that military operations meet the objectives of U.S. policy.

This is particularly the case in military operations other than war. Before and during non-combatant evacuations, peace operations, exercises, disaster relief and humanitarian assistance, such cooperation will be imperative because of the different mixes of diplomacy, force, and preparation required. A successful U.S. policy effort requires a carefully calibrated combination of diplomatic and military pressure, with economic inducements added. The security assistance officer at the embassy (Often the commander of the military advisory group) can facilitate communication and bridge the policy and operational distance between the ambassador and the COM. So can State’s Political Advisor to the COM, a senior ranking foreign service officer whose function is to provide the diplomatic and foreign policy perspective on military operations. The personal and professional relationship between the Foreign Policy Advisor (formerly called the Political Advisor) and the COM is the key to success.

The COM represents the coercive capacity of American power through a chain of command that goes to the president. He and his sizable staff oversee the operational tempo, deployments, readiness, exercises, and training of divisions, brigades, fleets, and air wings—resources, language, and culture that are the opposite of the art of diplomacy. Since all military activities have diplomatic impact, it is prudent that both work harmoniously to achieve common purpose. Ambassador and Commander interests intersect at the Military Assistance Advisory Group (also called Military Advisory Group, Military Liaison Office, and Office of Defense Coordination) level. The commander of the MAAG, which is an important arm of the country team since it provides training and military equipment to the host country, works for both the ambassador and the COM.
In the spectrum from peace to crisis to war the ambassador will tend to dominate decisions at the lower end of the spectrum. As the environment transitions to war the Commander assumes greater authority and influence. Haiti 1994 is an excellent example of how the handoff from ambassador to COCOM takes place. The American ambassador in Port-au-Prince, William Swing, was in charge of U.S. policy until General Hugh Shelton and the U.S. military forces arrived in September of that year. Once the military phase was completed, policy control reverted to Swing, thus restoring the normal pattern of military subordination to civilian authority. In the gray area of military operations other than war or in what is called an “immature” military theater, such as Latin America, disputes can arise between ambassadors and COCOMs about jurisdiction over U.S. military personnel in the country. The most illustrative was in 1994 between the Commander in Chief of the U.S. Southern Command, General Barry McCaffrey, and the U.S. Ambassadors to Bolivia, Charles R. Bowers, and Colombia, Morris D. Busby. The dispute had to be adjudicated in Washington by the Secretaries of State and Defense.28 Elevating a dispute to such a level is something the system would rather not do. The fact is that ambassador and COCOM must work closely together to coordinate U.S. military activities. Another distinction: COCOMs have regional perspectives, strategies, and programs while ambassadors are focused on advancing the interests of the United States in one country.

An important step forward in synchronizing interagency activities at the theater level has been the creation of the Joint Interagency Coordination Groups. These are literally interagency cells located at the combatant commands and staffed by personnel from across the government. Though in their infancy and not endowed with policy making authority, these groups offer the foundation for greater strategic and operational integration in the future.

The Continuing Challenges in the Interagency Process.

The tensions generated by cultural differences and jealousy over turf will always be part of the interagency process. The diplomatic and the military cultures dominate the national security system, though there are other cultures and even subcultures, within the dominant cultures. The former uses words to solve problems while the latter uses precise doses of force. Cultural differences are large but communicating across them is possible.29 Figure 6 compares the cultures of military officers and diplomats.

The principal problem of interagency decision making is lack of decisive authority; there is no one in charge. As long as personalities are involved who work well together and have leadership support in the NSC, interagency efforts will prosper, but such congruence is not predictable. The world situation does not wait for the proper alignment of the planets in Washington. There is too much diffusion of policy control. It is time to implement an NSC-centric national security system, with appropriate adjustments that align budget authority with policy responsibility. It would consolidate in the NSC the functions now performed by the Policy Planning Staff at State and the strategic planning done at Defense. Such reorganization recognizes the reality that the White House is where an integrated approach to national security planning must take place.

Asymmetries in resources are another impediment. The Department of State, which has the responsibility to conduct foreign affairs, is a veritable pauper. Its diplomats may have the best words in town, in terms of speaking and writing skills, and superb knowledge of foreign countries and foreign affairs, but it is a very small organization that has been getting smaller budget allocations from Congress. The corps of foreign service officers equates in number to about an Army brigade. The Department of State’s technology is primitive and officer professional development of the
Figure 6. Comparing Military Officers and Foreign Service Officers.³

kind that the military does is not promoted. Moreover, unlike the military, State lacks a strong
domestic constituency of support. The military has more money to conduct diplomacy than does
State. Secretary of State Colin Powell began to improve the Department’s budget. But the inability
to hire personnel, because of previous budgetary constraints, effected hundreds of positions in the
middle ranks of the diplomatic service. It will take decades of adequate funding to grow the foreign
service officers to fill authorizations at the appropriate grade.

The resource barons, those with people, money, technical expertise, and equipment reside in DoD
and the military services. Consequently, the military, especially the Army, is constantly being asked
to provide resources out of hide for nation-building purposes, for example in Haiti and Panama. It
is tempting to reach out to it because it is the only institution with an expeditionary capability, and
fungible resources and expertise. It can get there quickly, show the flag, bring significant resources
to bear, stabilize a situation, and create an environment secure enough for other agencies to operate.
On a much smaller scale the Agency for International Development is a baron, because it has money
and technical expertise to promote development and institution building. Other baronies exist, such as intelligence, Department of Justice, Commerce, and the Office of National Drug Control Policy.

Finally, the personnel systems of the various agencies of the U.S. Government do not promote professionalization and rewards in interagency jobs. What is needed is a systematic effort to develop civilian and military cadres that are experts in interagency policy coordination, integration, and operations. Some of this takes place. Military officers are assigned to various departments. For example, until 2002, 35 officers from all military services worked in the regional and functional bureaus of the Department of State. Senior diplomats (some of ambassadorial rank) are also allocated to military and civilian agencies, such as Foreign Policy Advisors at the regional unified commands, to the Special Operations Command, to peacekeeping and humanitarian missions, to various key positions in the Pentagon, and to the war colleges. These programs must be expanded. Unfortunately, the opposite was occurring in 2003. In order to convert military personnel slots to warfighting positions, the DoD recalled most of its officers from the civilian agencies, to include the State Department, which in turn reduced to 30 the number of diplomats posted to military organizations. An important element for interagency integration and harmony was weakened.

Moreover, there ought to be incentives for national security professionalism, as there are for joint duty in the military. For civilian agencies, something akin to the Goldwater-Nichols Act is needed to encourage interagency service, to include the Department of State. Promotions should be based not only on performance at Foggy Bottom and in Embassies abroad, but on mandatory interagency tours as well. Similarly professional development incentives should apply to civil servants that work in the national security arena.31

Admittedly, mandatory interagency tours would require significant changes in personnel systems and career tracking. The Report of the National Defense Panel of 1997, Transforming Defense: National Security in the Twenty-first Century, recommended creating “an interagency cadre of professionals, including civilian and military officers, whose purpose would be to staff key positions in the national security structures.”32 This would build on the jointness envisioned by the 1986 Goldwater-Nichols Act. The Report also recommended a national security curriculum for a mix of civilian, military, and foreign students. The Defense Leadership and Management Program of the DoD, a Master’s level initiative in national security studies for civilian personnel, is an important step in this direction. The Department of State, under Colin Powell’s guidance, began to invest in educating its personnel in strategic planning. Accordingly, the Department published The Department of State and Agency for International Development Strategic Plan for Fiscal Years 2004 to 2009. The document sets forth directions and priorities and supports policy positions enunciated in the President’s National Security Strategy. This is potentially an intellectual breakthrough for strategic integration. Also, more State Department personnel were allowed to participate in War College courses, thereby adding to the opportunities for mutual learning and strategic integration in the professional development of civilian and military leaders. In early 2005 there was serious discussion among senior Pentagon officials about creating a national security career path. At State, diplomats were now required to have interagency tours for advancement.

Implications for the Military Professional.

There are critical implications for the military warrior. The nature of future warfare is likely to be more military operations other than war, requiring more mobile, flexible light forces. Future war will also require a more intellectual military officer, one who understands the imperative of working with the panoply of civilian agencies, non-government organizations, the national and international media, and foreign armed forces. It is a commonplace of strategy that American forces
will rarely fight alone again; they will do so in coalition. Thus, the strategic Clausewitzian trinity of the people, the armed forces, and the government now encompasses the global community. The implications are clear; the military officer will have to develop greater diplomatic and negotiating skills, greater understanding of international affairs, capability in foreign languages, and more than a passing acquaintance with economics.

Moreover, the warrior will likely work with civilian counterparts across a spectrum of activities short of war. These include: strategic planning and budgeting, humanitarian assistance, peace operations, counter narcotics, counterterrorism, security assistance, environmental security, human rights, democratization, civil-military relations, arms control, intelligence, war planning and termination strategy, command and control of forces, continuity of government, post-conflict reconstruction, technology transfer, crisis management, overseas basing, alliances, non-combatant evacuations, and homeland defense.

Therefore, the future officer will also need greater appreciation of the institutional diversity and complexity of government, because of the need to advise a diverse audience of civilians on the utility of military power in complex contingencies that are neither peace nor war as Americans are accustomed to think of them. He or she will have to work in tandem with civilian agencies and non-government organizations unaccustomed to command systems and deliberate planning, and that often do not understand the limits of military power. Lastly, instruction on the interagency system and process should be mandatory for civilians and military alike. Such education must have a sound theoretical foundation in national security decision making, strategic planning, and organizational behavior, expanded by sophisticated case studies of relevant historical experiences. Because the United States will be heavily engaged in the spectrum of activities entitled humanitarian intervention, stabilization and reconstruction, and the transformation of societies, the curriculum of senior service colleges must emphasize the strategic integration of the instruments of national power to a much greater degree than they have in the past.

What attributes should the military officer bring? Above all, holistic thinking—the ability to think in terms of all the instruments of national power and respect for the functions and cultures of diverse departments and agencies. Communication skills are paramount. The effective interagency player writes and speaks well. He or she will be bilingual, able to function in military as well as civilian English. Bureaucratic jargon is the enemy of interagency communication. The military briefing, though an excellent vehicle for quickly transmitting a lot of information in formatted style, is not acceptable. One must be less conscious of rank because ranks will vary among the representative around a table. Someone of lower rank may be in charge of a meeting. A sense of humor, patience, endurance, and tolerance for ambiguity and indecisiveness will help. The ability to “stay in your box” and articulate the perspective of your department will be respected, though the temptation to poach on other domains will be there. The ability to anticipate issues, to consider the second and third order effects from the national level down to the country team and theater levels, will be invaluable. Finally, the interagency requires diplomatic and negotiating skills, the ability to network, and mastery of the nuances of bureaucratic politics and language.

The most evolved democracy in the world has the most cumbersome national security decision making process. Inefficiency is the price the founding fathers imposed for democratic accountability. But some of the inefficiency is the result of American strategic culture, with its multiplicity of players, plentiful but diffused resources and the penchant to throw resources at the problem, and the propensity to segment peace and diplomacy from war and military power. Frederick the Great cautioned: “Diplomacy without arms is music without instruments.” So did John F. Kennedy: “Diplomacy and defense are not substitutes for one another. Either alone would fail.”
structural changes must be made in the interagency system in order to harness human talent and resources intelligently.

Democracy is defined as a process of mutual learning and adaptation. Accordingly all institutions of government learn, adapt, and make appropriate changes. This is even more imperative for the national security agencies and personnel, where the stakes are high. The distempers in the interagency process evidenced in 2001-04 created new opportunities for learning and for adaptation. Fortunately, in time American democracy will make those adaptations. The question will be at what price and how quickly.

Figure 7. U.S. Departments and Agencies Involved in Foreign Affairs.
ENDNOTES - CHAPTER 3

1. The development of this chapter has been enriched by the insights of practitioners and colleagues in the interagency. Special thanks goes to Anthony Williams, David Bennett, Frank Jones, Gary Maybarduk, Dennis Skocz, and Erik Kjonnerod for helping to illuminate the labyrinthine ways of Washington. Joseph Cerami and Robin Dorff, chairmen of the Department of National Security and Strategy of the Army War College, provided the time and the support for research.

27. Excellent advice on how the ambassador and the regional unified commander should work together is found in
Ted Russell, “The Role of the Ambassador, the Country Team, and Their Relations with Regional Commanders,” in U.S. Army War College, Course Directive: Regional Appraisals, AY 97, Carlisle Barracks, PA, 1997, pp. C1-C9. A Memorandum of Understanding between the Department of State and the Department of Defense covers the function of the Political Advisor. The MOU “recognizes the valuable role POLADs render to the Department of Defense and the Department of State in assessing the political implications of military planning and strategy and in serving as the principal source of counsel on international issues to their respective Commanders-in-Chief . . . the deep level of commitment and cooperation acknowledged by the Secretary of State and the Secretary of Defense in executing foreign and security policy established by the President.” For how an embassy functions, see Shawn Dorman, ed., Inside a U.S. Embassy: How the Foreign Service Works for America, Washington, DC: American Foreign Service Association, 2003.

28. For specifics, see the telegrams dated June 6, 1994, from USCINCSOUTH, June 8, 1994, from Embassy La Paz, and June 9, 1994, from Embassy Bogota.

33. There are indications that even the Department of State, the first among equals of the executive departments, is beginning to understand the value of strategic planning. See Secretary’s Office of Resources, Plans, and Policy, U.S. Department of State, U.S. Department of State Strategic Plan, Washington, DC, September 1997. See also FY 2004-2009 Department of State and USAID Strategic Plan, August 2003. Moreover, the U.S. Army and State established an ongoing tutorial to teach strategic planning to diplomats. At the same time, more State students will attend the U.S. Army War College course through distance learning. Excellent advice on how military culture should interact with the culture of non government organizations during humanitarian relief operations, peacekeeping, and stability operations is Judith Stiehm, “The Challenge of Civil-Military Cooperation in Peacekeeping,” Airman-Scholar, Vol. IV, No.1, Winter 1998, pp. 26-35.

34. Military officers contemplating assignment to the Pentagon or civilians wishing to understand how to work with counterparts there should read the advice in Perry Smith, Assignment Pentagon: The Insider’s Guide to the Potomac Puzzle Palace, second edition, revised, Washington, DC: Brassey’s, 1992.

CHAPTER 4

PDD-56: A GLASS HALF-FULL

John F. Troxell

A lot of Defense Department folks wonder where the rest of the government is in this war. There is clearly a need for greater interagency collaboration.

Secretary of Defense Robert Gates

In October 1993, the American people awoke to the morning broadcast of horrific scenes of the bodies of American service members being dragged through the streets of the far off city of Mogadishu. A failed effort on the part of an elite unit of Army Rangers to capture the Somali warlord Mohammed Farah Aidid resulted in urban carnage, leaving 18 American dead, 74 wounded, and perhaps as many as a thousand Somalis killed. The story has since been immortalized in the book and subsequent movie, 

Blackhawk Down.

David Halberstam referred to this crisis as a “major league CNN-era disaster.” This debacle led President Clinton to announce to the nation that the effort in Somalia, after an initial reinforcement, would be completely withdrawn in 5 months. Two months after the disaster, Secretary of Defense Les Aspin left the administration. It has since been learned that the Somalia debacle also fed the appetite of Osama bin Laden to drive the United States from the Middle East. One positive outcome of the U.S. experience in Somalia, however, was that it challenged the interagency to reexamine its policymaking procedures. The eventual outcome of this effort was Presidential Decision Directive 56 (PDD-56) “The Clinton Administration’s Policy on Managing Complex Contingency Operations.”

Today, the United States once again finds itself enmeshed in a very difficult and increasingly unpopular effort to remake a nation that is awash in violence and political incompetence. A collective national groan seems to ask how did we get into this mess. Why haven’t we been able to apply our considerable resources in an efficient and effective manner to protect and further our national interests? The response to this growing frustration is similar as well, fix the interagency. There is wide recognition that stabilizing or reconstructing a nation (more about these terms later) requires the application of all of the elements of national power—diplomatic, informational, military, and economic. The key to a successful policy outcome is to orchestrate all of these elements in a coordinated plan, execute the myriad tasks effectively and efficiently, and then gracefully exit leaving behind a reasonably secure and functioning country. As a nation, we have been unsuccessful in pulling this all together, according to the common refrain, because the interagency is poorly organized and doesn’t know how to plan. The military element of power, on the other hand, has been fairly successful in deflecting attention from itself when it comes time to fix blame. The military complains of mission creep—“it’s not my job,” does an admittedly good job of reassessing the operation and capturing lessons learned, and then writes a new doctrinal manual addressing those lessons and declares itself ready for the next mission.

For strategic planners and thinkers two things should be clear from even a cursory review of the past 15 years. First, the strategic environment that the United States faces places a premium on our ability to succeed in a wide variety of operations that are down the intensity scale from state-on-state conflict. That doesn’t mean that military conflict between nation states is obsolete, just that the probability is greatly diminished, and that real challengers to U.S. national interests will seek to avoid tangling with the overwhelming conventional military power of the United States. The second observation is that fixing the interagency along the lines proposed by PDD-56 only
addresses one half of the problem. As will be reviewed in detail later, PDD-56 and a host of follow-on adjustments and initiatives has done a good job of focusing on the challenge of better planning. But better planning without the capacity or capability to execute the plan is fruitless. In fact, it might be better to have properly structured and trained capability, even in the absence of a coordinated plan, than to have a well coordinated plan in the absence of capability.

As a nation we have been reluctant to adequately resource the capabilities needed to further our interests in the 21st century security environment. This chapter will argue that the predominant focus on improving the interagency writ large has been somewhat misplaced. The key to success in the future is resourcing the capabilities needed to address the challenges of nation building, and the shortest route to creating those capabilities is through the military, not the interagency. In many cases, the military is also the best alternative to lead these efforts. The United States has never been good at coordinating and applying all of the elements of national power in a synchronized fashion. General Albert Wedemeyer, author of the World War II victory plan, argued that, “Our failure to use political, economic and psychological means in coordination with military operations during the war also prolonged its duration and caused the loss of many more American lives.” Up to now we have been able to muddle through and avoid unrecoverable disasters. But we owe it to the fallen heroes of Blackhawk Down and to the service members and civilians on the front lines in Afghanistan and Iraq to be better prepared for the next stabilization and reconstruction mission.

Clarifying Terms.

Interagency coordination is important even in intense combat operations as General Wedemeyer noted above, but the primary concern of interagency operations is further down the spectrum of conflict scale. The terminology used to describe these operations is vast and ever changing. It has ranged from the broad categories of smaller scale contingencies, to military operations other than war, to post-conflict operations, to humanitarian interventions. More definitive definitions have included peace operations, the subject of the Army’s doctrinal response to Somalia, and more recently stability operations, which subsumed peace operations as one of its ten broad types. PDD-56 was directed at complex contingency operations defined as peace operations. The most recent policy pronouncements from the Bush administration include DoD Directive 3000.05, “Military Support for Stability, Security, Transition, and Reconstruction (SSTR) Operations,” and National Security Presidential Directive/NSPD-44, “Management of Interagency Efforts Concerning Reconstruction and Stabilization.” The DoD Directive defines SSTR as operations that “lead to sustainable peace while advancing U.S. interests.” But the document then goes on to almost exclusively discuss stability operations which are designed or established to “maintain order in States and regions.” NSPD-44 does not include a definition for reconstruction and stabilization.

Thankfully, others have stepped in to clarify the definitional jumble. Colonel Bryan Watson, in a recent Carlisle Paper in Security Strategy, has offered the following definitions. Stabilization is defined as the effort to create a secure and stable environment and to provide basic human needs of the population. It is most closely linked to the immediate conclusion of major military operations and is partially aimed at preventing the conditions that could fuel a continuing insurgency. Reconstruction, on the other hand, represents a shift toward creating self-sustaining political and economic institutions that will ultimately permit competent self-government. Colonel Watson concludes that military capabilities under military control are more suited for stabilization, whereas reconstruction is more suited for civilian agencies, IGOs, and NGOs.

The key point is that the challenging interagency operations that have received so much study and attention are those operations and crisis situations that require the blending together of both
military and traditional civilian capabilities and spheres of operations in the gap between conflict and peace. The military can win the wars, and humanitarian, relief and diplomatic entities can operate in the “neutral” or “humanitarian space” to further peaceful development and integration of nation states into the international community. But how should the government go about winning the peace? How do we successfully transition from stabilization to reconstruction? As Hans Binnendijk and Stuart Johnson have concluded in their study on stabilization and reconstruction operations, “no military solution is possible absent a political and economic solution, and the persistent conditions of insecurity prevent enduring, positive, political and economic development.”9 To be successful in the 21st century security environment, the U.S. Government must develop a framework and resource the needed capabilities to operate in this dangerous middle ground.

Prelude to PDD-56.

According to Michele Flournoy, the principal author of PDD-56, “one of the most powerful lessons learned during the 1993 operation in Somalia was that the absence of rigorous and sustained interagency planning and coordination can hamper the effectiveness, jeopardize success, and court disaster.”10 Somalia was not the first post-Cold War stabilization and reconstruction operation, and regime change did not begin with the Taliban or Saddam Hussein. In December 1989 the United States forcefully removed the regime of Manuel Noriega from Panama in the largely successful Operation JUST CAUSE. The follow-on stabilization phase, Operation PROMOTE LIBERTY, however, was another matter. Planning was incomplete and haphazard; there were insufficient civil affairs, engineers and military police for the rebuilding effort; and interagency cooperation was poor because many of the agencies were excluded from the DoD planning effort.11 Real scrutiny of the problems associated with operations in Panama may have been diverted by the focus on the Persian Gulf only 8 months later, or because of the absence of a “Blackhawk Down” type incident. The Clinton administration was not so fortunate, but his administration’s political misfortune led to a major institutional improvement in the conduct of interagency operations.12

The after-action review (AAR) process associated with Somalia was intense and represented real bureaucratic battles in the interagency community and in DoD. The Army was largely successful in deflecting attention from its performance. The most critical lesson from the UNOSOM II peace enforcement mission and thus the real value-added from any corrective action, according to the Army, was the need to improve the interagency planning process. Besides, the Army was preparing to publish a new Field Manual, Peace Operations, that would obviously address any of its shortcomings.13 The Army’s view was largely accurate, and Flournoy, as the OSD lead, recognized it as well. Flournoy was intent on developing an integrated interagency planning process that would both help define the strategy and highlight policy disconnects for decision makers.14 The military was also keen on developing improved coordination procedures with the interagency and proceeded to take the lead in numerous developmental efforts. One of the most important initiatives at this time was the establishment of the U.S. Army Peace Keeping Institute. This small but highly effective body played a key role in the eventual development of the interagency planning process that became imbedded in PDD-56.

The first post-Somalia test case was Haiti. Atlantic Command (USACOM) was responsible for planning Operation UPHOLD DEMOCRACY and along with DoD conducted extensive interagency coordination. USACOM’s Haiti Planning Group prepared a detailed “Interagency Checklist for Restoration of Essential Services.”15 The Haiti Executive Committee (ExCom) was established and developed the first ever interagency political-military plan (POL-MIL plan), which articulated the mission, and an interagency strategy. The primary players rehearsed the POL-MIL plan prior to
the launch of the U.S.-led multinational force. Additional interagency planning efforts included Southern Command, under General Clarke, who was very active in attempting to institutionalize interagency planning conferences; General Zinni, as the Commanding General, 1st Marine Expeditionary Force from 1994-1996, sponsored interagency planning exercises in the Pacific; and General Joulan, SACEUR, sponsored the major IFOR rehearsal at Aachen, Germany, complete with the full range of interagency partners.

One of the noted success stories of conducting a detailed interagency planning process complete with a POL-MIL plan was the U.S.-supported United Nations Transitional Administration for Eastern Slavonia (UNTAES). UNTAES was established on January 15, 1996, with a mandate to demilitarize the Eastern Slavonia region, including the city of Vukovar, which had been overrun by Serbian forces several years earlier. Under the leadership of Jacques Klein, a senior American Foreign Service Officer, UNTAES was able to demilitarize the region, monitor the safe return of refugees, and conduct local elections. The territory was peacefully returned to Croatian control in January 1998. The planning process outlined in the soon to be published PDD-56 was instrumental in the success of this operation.

The final post-Somalia but pre-PDD-56 interagency planning effort that had an impact on the publication of PDD-56 was only considered but never executed. In the late spring and early summer of 1996, UN Secretary General Boutrous Boutrous-Ghali was pushing for the UN to conduct contingency planning in preparation for a peacekeeping mission to Burundi. The Tutsi/Hutu conflict that had produced the genocide in Rwanda in 1994 was reappearing in neighboring Burundi. The Clinton administration, in contrast to its reluctance to get involved in Rwanda, was a strong supporter of this effort in the Security Council. A team of military and interagency leaders and planners was sequestered at the U.S. Army War College with the task of developing a POL-MIL plan for intervention in Burundi. The detailed planning effort revealed the extensive force package required to achieve a relatively uncertain outcome. The military balked, and the decision was made not to intervene. It was the detailed POL-MIL interagency planning process that generated consensus behind the no-go decision.

Concurrent with the last of these military/interagency planning efforts, the Joint Staff, not to be outdone by the Army’s publication of FM 100-23 and sensing a lack of guidance on the subject, published Joint Pub 3-08, Interagency Coordination During Joint Operations, in 1996. The document discussed interagency processes and players, outlined the principles for organizing interagency efforts, and the roles and responsibilities for JTFs. Although the publication was a welcome addition to the literature, it did not “adequately explain methods for interagency planning, coordination, and execution. Thus DoD and other agencies reiterated the need for policy guidance such as that found in PDD-56.”

PDD-56.

Arguably, the military was after three things in its efforts to transform the interagency process. Fundamentally, it wanted to infuse better planning in interagency operations, and thus it supported the adoption of the military planning process. Second, it clearly recognized the need for unity of effort. And finally, the military remained concerned about mission creep and wanted to delineate those tasks that should clearly be in the purview of other agencies. With the possible exception of the desire to avoid mission creep, all of these objectives made perfect sense and dovetailed with the needs of the interagency planning community.

PDD-56 was signed and published by the Clinton administration in May 1997. The stated intent of the directive was to define a specific planning process for managing complex contingency operations
and identify implementation mechanisms to be incorporated into the interagency process with the ultimate goal of achieving unity of effort among U.S. Government agencies and international organizations. The planning process and implementation mechanisms selected closely mirrored major military procedures and thus supports a claim that PDD-56 attempted to impose a military version of the planning process on the interagency. This is perfectly understandable given the fact that planning is a core competency of the military, and that few if any other government agencies have any specific operational planning experience. Consequently, the structure of the plan and the supporting activities enumerated in PDD-56 adopted the best practices of the military.

Unity of effort was to be achieved by the appointment of an Executive Committee (ExCom) appointed by the Deputies Committee. The ExCom was responsible for the day-to-day management of U.S. participation in a complex contingency. The ExCom was to use an integrated interagency plan to identify critical issues, establish priorities, evaluate agency concepts of operations, and conduct after-action reviews.\(^\text{20}\)

The PDD required that a political-military implementation plan be developed. Commonly referred to as the POL-MIL plan, it was to be developed using the generic political-military scheme as a template. This template was modeled after the five paragraph military operations order and covers at a minimum: situation, assessment, national interests, mission statement, objectives, concept of operations and organization, various tasks, and participating agencies mission area plans.\(^\text{21}\) Unity of effort is a desired outcome of the pol-mil planning process. This planning process clearly supported two of the military’s most important principles of war. The first is objective: direct every operation towards a clearly defined, decisive, and attainable objective. The second is unity of command: for every objective, insure unity of effort under one responsible commander.\(^\text{22}\)

The next two elements of PDD-56 focused on two critical practices from the reinvigorated Army training regime at the National Training Centers and the Battle Command Training Program: rehearsals and after-action reviews (AAR). PDD-56 directed the Deputies Committee to rehearse the pol-mil plan. ExCom members presented the elements for which they are responsible to include all applicable supporting agency plans. After the conclusion of the operation the ExCom is also charged with conducting the AAR. This comprehensive assessment of interagency performance would include a review of interagency planning and coordination and problems in interagency execution. Appropriate lessons learned would be captured and disseminated throughout the interagency community to ensure future operations did not repeat the same mistakes.\(^\text{23}\)

The final provision directed the NSC to work with various educational institutions to develop an annual training program aimed at mid-level managers (Deputy Assistant Secretary level) to train them in the development and implementation of pol-mil plans. The intent was to create a cadre of trained professionals familiar with PDD-56’s integrated planning process, and thus able to improve the government’s ability to manage future operations.\(^\text{24}\)

As noted above, the military played a major role in the development of various aspects of the planning process outlined in PDD-56. Combining the fact that planning is a core competency of the military with the military’s focus on operational preparedness, made it only natural that best practices from the military would migrate into the interagency planning and implementation process. The military also formalized the inclusion of the POL-MIL plan in its plans and orders process. According to Joint Pub 3-08, “Interagency, Intergovernmental Organization, and Nongovernmental Organization Coordination During Joint Operations Vol. I,” dated 17 March 2006, “the commander will be guided by the interagency provisions of the POL-MIL plan, when provided, and will disseminate that guidance to the joint force in Annex V, the Interagency Coordination Annex of the combatant commander’s OPLAN.”\(^\text{25}\) Thus the Pentagon formally recognized the importance of including civilian agency requirements in the deliberate planning process.
Interagency Planning Post-PDD 56.

Michele Flournoy in a recent evaluation of PDD-56 acknowledged that the directive had never been fully implemented although in those cases in which it was applied it generated useful planning processes and tools. She went on to say that, “the process produces more than just a set of documents: it allows key players to build working relationships, hammer out differences, identify potential inconsistencies and gaps, synchronize their actions, and better understand their roles.”26 The innovative aspects of PDD-56 made substantial progress in building institutional planning capacity, but pockets of resistance to interagency planning remain, reflecting both an anti-planning bias on the part of some agencies and an underestimation of the effort needed to conduct a full-fledged planning effort.27 The lack of a “planning culture” outside the Department of Defense represents a significant challenge to institutionalizing a standard planning paradigm. According to the Beyond Goldwater-Nichols report from CSIS, “Whereas military officers are taught to see planning as critical to success in operations and trained in its finer points, this notion is largely foreign to other agencies like the departments of State and Treasury.”28 These civilian agencies also tend not to have dedicated planning staffs or expertise.

The Bush administration had originally decided to develop National Security Policy Directive (NSPD) XX to replace PDD-56 and initial reports indicated that it would propose some useful enhancements to the interagency planning process. NSPD XX was never issued, and according to Flournoy, in the case of Afghanistan there was no person or entity in charge of interagency planning and coordination.29 Douglas Feith, the Under Secretary of Defense for Policy, expressed the view that the Afghanistan reconstruction effort had been mishandled by the State Department resulting in a dysfunctional division of authority between State and the Pentagon.30

The Bush administration’s successor to PDD-56 was finally issued on December 7, 2005, as National Security Presidential Directive (NSPD) 44, “Management of Interagency Efforts Concerning Reconstruction and Stabilization.” The purpose of this directive is to “promote the security of the United States through improved coordination, planning, and implementation for reconstruction and stabilization” operations.31 It establishes a Policy Coordination Committee (PCC) for reconstruction and stabilization to oversee and help integrate all DoD and civilian contingency planning. It specifies that the State Office of the Coordinator for Reconstruction and Stabilization (S/CRS) should take the lead in integrating the efforts and capabilities of the interagency for reconstruction and stabilization purposes. S/CRS is also tasked with developing strategies and identifying states that may become unstable, a proactive and preventative approach not found in PDD-56. Finally, S/CRS is tasked with developing a civilian response capacity for these types of operations. Several of the “military” aspects of PDD-56 are missing: no specifics about a POL-MIL plan or associated template, no mention of a rehearsal, and no guidance for a training program. The AAR is also absent, but NSPD-44 does direct the identification and subsequent incorporation of lessons learned. PDD-56 had a strong military flavor; NSPD-44, in contrast, has a distinctly foggy-bottom taste.

As lessons from Iraq begin to accumulate, there is a great deal of focus on interagency planning. Contrary to popular belief, however, there was considerable interagency planning and post-conflict planning associated with Operation IRAQI FREEDOM. Numerous military and other interagency efforts were very active. The problem wasn’t the lack of planning, but more specifically problems with integration, generally poor assumptions about conditions in Iraq, and eventually uncooperative or unfocused leaders.32 As Ambassador Paul Bremer claimed, “we planned for the wrong contingency.”33 The planning process, although not non-existent, was certainly flawed. One of the Iraq Study Group recommendations included the need to adopt the Goldwater-Nichols model
to improve the interagency planning process. The Beyond Goldwater-Nichols Phase 1 report is a good place to start to review some of the many planning initiatives being proposed. Chapter 8 of this report, “Improving Interagency and Coalition Operations,” includes nine recommendations, seven of which specifically address planning. For the most part these proposals are not dramatically different from the framework established in PDD-56. William Nash and Ciara Knudsen, in their work for the Princeton Project for National Security, have done an excellent job in summarizing the challenge and need to harmonize the military and civilian approaches to planning:

...the word “plan” for civilians and military means two different things. The military planning process starts with an objective, is handed over to the many layers of the military planning machine adding in resources, strategy, intelligence, training, and gaming. Given the objective, the military will come up with a plan to achieve it. The civilian planning process up until now has been much more ad hoc and more conceptual in nature. The planning process tends to concentrate more on developing the objective—what it should be—and less on the exact details of how to get there. As a result, post-Iraq reform proposals attempt to meld the two approaches—informing the military planning process with the subtleties of reconstruction challenges, and operationalizing civilian planning.

Before leaving the issue of interagency planning, there is one area that seems to warrant further consideration. PDD-56 and its immediate successor, NSPD-44, have focused on foreign interventions and reconstruction and stabilization operations abroad. In fact PDD-56 specifically stated that it did not apply to any domestic situations. The aftermath of 9/11 and the establishment of the Department of Homeland Security have opened up an entirely new arena in which coordinated interagency operations are critical. Joint Pub 3-08, in fact, splits its coverage between crisis response to domestic operations versus crisis response to foreign operations. The potential exists to adopt, or as a minimum consider, a new planning model, the National Response Plan (NRP) and its associated Emergency Support Function (ESF) annexes. The NRP, last updated May 25, 2006, forms the basis of how the federal government coordinates with state, local, and tribal governments and the private sector during domestic incidents. The ESF annexes are the primary means through which the Federal government provides assistance to State, local, and tribal governments or to Federal departments and agencies conducting missions of primary Federal responsibility. They represent an effective mechanism to group capabilities and resources into the functions that are most likely needed during actual or potential incidents where coordinated Federal response is required. The ESF mechanism provides a modular structure to identify the precise components that can best address the requirements of a particular incident. The new strategy development framework being developed by S/CRS that includes the delineation of Major Mission Elements has some similar features to the ESF approach.

### Failure to Resource the Plan.

Peacekeeping is not a job for soldiers, but only soldiers can do it.

Former UN Secretary General Dag Hammarskjöld

There’s nothing wrong with nation building, but not when it is done by the American military.

Condoleezza Rice

If there is one thing that the U.S. Army War College has been able to inculcate in its students for at least the past generation it is the strategic framework of ends, ways, and means. The interagency planning effort that began with PDD-56 and continues to evolve and strengthen, is focused on the development of the ends—the strategic objectives and the ways—how to accomplish those
ends. But without the means—capabilities and capacities to execute the plan, the planning effort is superfluous. The major cause of poor performance in complex interagency operations is the lack of adequate means. Security analyst James Carafano, from the Heritage Foundation, argues that “the real shortfall in the interagency process is the lack of adequate capacity to conduct operations outside Washington.”

There are only two sources for the capabilities and expertise needed to bring to bear all of the elements of power to help aright a failed state: civilian or military. Actually there is a third; we can depend on our coalition partners. In fact, this was the anticipated approach in Iraq. Operation Plan ECLIPSE II, the stability plan developed for Iraq counted on existing Iraqi organizations and security forces. The Pentagon also believed that other nations would contribute to the stabilization and reconstruction process, to include the presence of three multinational divisions focused on bridging the gap between conventional military operations and policing functions. The coalition angle remains very important and the U.S. Government goes to great lengths to enlist broad and effective support. The QDR explicitly recognizes the need to build partner capacity. However, as Iraq demonstrates, coalition partners may not always be there nor be present in sufficient strength, so it behooves the nation to be prepared to shoulder the burden, particularly in cases where important or vital U.S. interests are at stake.

Most civilian agencies in the U.S. Government have no rapidly deployable experts and capabilities. Civilian agencies lack an operational culture and consequently, even if tasked to perform a critical mission, they do not have the personnel who are trained and ready for these missions. They also lack the authorities and resources to rapidly deploy them and to quickly establish programs in the field. Findings from a Post Conflict Strategic Requirements Workshop conducted at the U.S. Army War College, concluded that the lack of quick response capability in the civilian agencies would ensure that the military would bear the brunt of all essential tasks in a stabilization and reconstruction operation. The lack of civilian partners creates mission creep, as military personnel conduct tasks for which they are ill-suited or ill-prepared. It is precisely this concern with mission creep that made the military such eager partners in the PDD-56 effort. According to Mark Walsh and Michael Harwood, “Incomplete or failed integration of non-DoD agencies into the development of strategy and plans for responding to complex contingencies [could] also result in demands for the military to perform tasks outside its range of skills and competencies. Deficiencies in the interagency process could extend the military’s involvement in an intervention beyond the need for unique military personnel and assets to cope with the complex emergency.” The military has always been a self-interested partner in this process.

The Department of Defense has the capability and certainly the capacity to rapidly deploy that capability virtually anywhere on the globe almost overnight; however, it lacks the will. Colin Powell, while still Chairman of the Joint Chiefs of Staff, summed it up well:

Let me begin by giving a tutorial about what an armed force is all about. Notwithstanding all of the changes that have taken place in the world, notwithstanding the new emphasis on peacekeeping, peace enforcement, peace engagement, preventive diplomacy, we have a value system and a culture system within the armed forces of the United States. We have the mission: to fight and win the nation’s wars. Because we are able to fight and win the nation’s wars, because we are warriors, we are also uniquely able to do some of these other new missions that are coming along—peacekeeping, humanitarian relief, disaster relief—you name it, we can do it. . . . But we never want to do it in such a way that we lose sight of the focus of why you have armed forces—to fight and win the nation’s wars.

Tracking with this cultural bias against lesser contingencies, the Army has planned poorly for stabilization operations and is not properly resourced or structured to handle these increasingly relevant missions. Conrad Crane, author of the recently released manual on Counterinsurgency,
concluded in a study from several years ago, that “neither budgets nor forces have been designed to take into account the sober fact that during the last decade any major deployment of military force to resolve a crisis . . . has ended by creating new long-term force requirements to keep the situation stabilized . . .”45 A more recent study draws the same general conclusion that the Army mortgaged its ability to conduct stability operations and deliver the required enduring results. Even more disturbing is the claim that the Army’s Modular Force transformation continues to discount the importance of stabilization operations, and fails to provide the modular and scalable force pool of stabilization capabilities that are required.46

DoD seems a little schizophrenic on the issue. On the one hand the Department has recently issued DoD Directive 3000.05 “Military Support for Stability, Security, Transition, and Reconstruction (SSTR) Operations,” which explicitly defines stability operations as a core U.S. military mission to be given priority comparable to combat operations.47 At the same time, in the QDR it presents a strong case that resources should be placed against increasing interagency and coalition partner capacities. One example is the effort to create NATO stabilization and reconstruction capability and a European constabulary force.48 There is certainly nothing wrong with encouraging partners to do more; burden sharing has long been an element of our alliance politics. But this is from a Secretary who some have claimed supported a strategy of nation-building “lite,” involving a rapid transition to local control.49 If the U.S. military is not willing to invest in stabilization and reconstruction capabilities, why should we expect our allies to pick up the slack?

Efforts to create expeditionary civilian capability have proliferated recently. One of the first was the call for a postwar Reserve Corps in legislation sponsored by Senator Lugar. The intent is to deploy civilian experts in civil affairs, law enforcement, engineering, economic development, and government operations as quickly as possible after the fighting ends and allow U.S. military forces to be withdrawn sooner.50 Another related proposal is the Active Response Corps, which is a State Department effort to increase the surge capacity in the department to support stabilization and reconstruction missions. The initial goal is to expand this capability to 30 personnel by the end of 2007.51 These efforts should not be belittled. Capacity from any source is to be welcomed, but efforts that provide such small increments of capability may generate more difficulty deploying, integrating, and sustaining them than they are worth. The Defense Science Board seems to be on track with its conclusion that “the rest of the Executive Branch has made very little progress toward the development of operational capabilities applicable to stability operations; and the Congress has not provided Departments other than Defense with appropriate authorities and resources in order to develop these capabilities.”52

The capability to conduct stabilization and reconstruction operations predominantly resides in the military. According to noted military historian Max Boot,

The creation of greater civilian nation-building capacity would not let the armed forces off the hook. No matter how much civilian management improves, the bulk of the manpower for any nation-building assignment would still have to come from the pentagon. The armed forces need to do a much better job of preparing for such work . . .53

The military has civil affairs, engineers, military police, medical, and the full gamut of logistical expertise. This expertise is organized and prepared to rapidly deploy and is equipped to operate in the dangerous conditions between peace and war that often characterize stabilization and reconstruction operations. Eventually the operation can transition to civilian capability, but only after a degree of security has been established, largely as a result of the early and effective deployment of military forces organized for the stabilization and reconstruction mission. DoD Directive 3000.05 explicitly places a priority on stability operations and capabilities so the military’s long-standing cultural
aversion to the use of U.S. military power for nation building should no longer be a factor. The QDR recognizes the need to rebalance the mix of joint capabilities and forces. This rebalancing effort should be in the direction of creating robust stabilization and reconstruction forces along the lines originally proposed by the NDU study on *Transforming for Stabilization and Reconstruction Operations*. The center piece of this study called for the organization of two S&R division equivalents that would plan, develop doctrine, train, and exercise for S&R missions. The details of the organization are open for debate but the need for a dedicated capability within the military also corresponds with the strategic argument put forward by Thomas Barnett in the *Pentagon’s New Map*. Barnett presents a convincing case that the U.S. needs to transform toward a bifurcated military: one that specializes in high-tech, big-violence war, and one that specializes in relatively low-tech security generation and routine crisis response.

**Conclusion.**

Trends in the global security environment suggest that stabilization and reconstruction operations are likely to be a major component of U.S. strategy in the coming decades. Success in these operations requires what the QDR refers to as “unified statecraft: the ability of the U.S. Government to bring to bear all of the elements of national power at home and to work in close cooperation with allies and partners abroad.” Unified statecraft obviously implies interagency collaboration and thus the planning framework originally presented by PDD-56 and since modified will continue to be of prime importance. The military aspects of the framework will also likely endure as the military planning culture will continue to drive the planning process toward acceptable and feasible ways to accomplish the interagency derived national objectives.

The most robust planning procedure will not succeed however, unless the necessary means are available to execute the plan. Stabilization and reconstruction operations are so distinct from warfighting operations that they require special organizations and capabilities. The military will always be the predominant supplier of these capabilities, and it will require a culture change on the part of the military to fully accept the dictates of DoDD 3000.05 to view stability operations on the same level as “fighting and winning our nation’s wars.” DoD and the Army will need to develop programs, organizations, and plans to be more effective in the stabilization and reconstruction environment. PDD-56 represents a glass half-full concerning successful interagency operations. Its realistic planning framework needs to be coupled with adequate and dedicated means to top-off the glass and allow the United States to be successful in this new and complex security environment.

CHAPTER 5

NATIONAL SECURITY POWERS:
ARE THE CHECKS IN BALANCE?

Marybeth P. Ulrich

On the distinction between policy success in domestic and foreign policy, President John F. Kennedy once noted, “The big difference is that between a bill being defeated and the country [being] wiped out.” Much is at stake in the formulation and implementation of national security policy. Not only is the achievement of national interests on the line, the preservation of the framers’ constitutional allocation of power designed to keep liberty and security in balance is also at stake. As the United States proceeds further in its “Long War” focused on fighting terrorism, its political elite is struggling to define the degree of collaboration that must remain between the different branches of government. Does a state of national emergency or war justify the suspension of deliberation and consultation inherent in the American political system’s design? Does Congress retain meaningful powers to resist presidential assertions of power? What role should the courts play in limiting or facilitating presidential overreach and congressional reassertion of its powers? These are key questions of concern to all who participate in and seek to understand the U.S. national security policymaking process. This chapter will review the constitutional foundations of the American political system, explore the adaptation and evolution of this original distribution of power, and assess the impact of the current state of “checks and balances” on prospects for strategic success and the preservation of American democracy.

CONSTITUTIONAL FOUNDATIONS

A unique aspect of the American political system is its design feature creating two co-equal principals among the President and Congress. The framers of the Constitution envisioned a national security process that would be dependent on a system of shared and separate powers across the democratic institutions that they created. Embedded in these constitutional foundations are the formal sources of power of the Presidency and Congress, the two key democratic institutions that work together to formulate and carry out national security policy.

Some scholars argue that the Framers’ intent to give the Congress a leading role in government is evident in the fact that Article I of the Constitution grants many explicit powers to the Congress in comparison to the ambiguity and vagueness of the President’s powers outlined in Article II. Indeed, a survey of the historical record reveals that over time presidents have successfully exploited the ambiguity of their formal powers to increase the power of the Presidency vis-à-vis the Congress. A brief review of the constitutional basis of each institution’s powers will be useful to strategists seeking to understand the evolution of these powers in the life of the American republic.

The Framers envisioned the Congress as the main preserve of governmental powers. The powers enumerated in Article I, Section 8 touch on the entire scope of governmental authority. Chief among these is the power to tax and spend. This power of the purse, checked by the President’s veto power, is the defining characteristic of the Framers’ intent to create an energetic central government with a vigorous legislature. The Framers concluded the powers enumerated in Article 8 with the elastic clause, the power “to make all laws which shall be necessary and proper for carrying into execution the foregoing powers.” The shared vision of their republic was that of a “deliberative legislature, composed carefully to reflect both popular will and elite limits on that will.”

The first sentence of Article II clearly designates the President as the Chief Administrator of the government, but the Constitution offers few specifics about how this executive responsibility should be carried out. The President’s role as Chief Executive stems from language in Section 2 that requires the heads of each executive department to report to the President. In the Washington administration the federal government consisted of only three cabinet departments (State, Treasury, and War) and a few hundred people. Of course, the vast bureaucracy of the United States has grown exponentially since then and is now comprised of 15 executive departments and 136 federal agencies and commissions backed up by a work force of 1.7 million federal civil service employees. As the federal government has grown, the power of the President has also expanded as the statutory and constitutional responsibility for the policies, programs, and expenditure of funds is asserted across the executive branch.

Authority to administer the federal bureaucracy, however, does not necessarily translate into its control. All presidents are faced with the challenge of making the bureaucracy responsive to their leadership. Two key tools to shape the executive branch’s outputs into a more coherent Administration vision are the use of the appointment authority and the White House Staff. Article II, Section 2 gives the President the power to appoint the department and agency heads within the federal government.

President Dwight D. Eisenhower created the schedule C personnel classification for appointed policymaking positions throughout the executive branch. This represented a shift from party-based patronage that rewarded the party faithful with everything from predominantly uncontroversial government jobs in the field to key policy posts in Washington. Schedule C personnel play critical behind-the-scenes roles, such as setting the schedules and agendas of cabinet members, guiding political strategy, and giving legal opinions and policy advice. These appointees are lower in rank than noncareer Senior Executive Service (SES) officials, who fall just below presidential appointees and who must be confirmed by the Senate. At latest count, SES and Schedule C employees numbered 1,935 in the George W. Bush administration. In all, President George W. Bush has 3,000 political appointees serving in his administration. Although political appointees account for less than two-tenths of one percent of the total civil service, their presence results in significant influence throughout the policymaking process. In the modern presidency, presidents have offered these positions to ideologically compatible people who will work to ensure that their department or agency’s policies are in sync with the President’s vision.

The Senate’s confirmation role is its check on the President’s appointment power. While the vast majority of the President’s nominations are confirmed, the potential to subject nominees to intense congressional scrutiny and to ultimately reject candidates gives the Senate great influence in the appointment process and, tangentially, in the overall policy process. While the executive sits at the top of the federal bureaucracy, the design of the various departments and agencies is specified in congressional statutes that detail their structure and duties. Though not explicitly mentioned in the Constitution, Congress’ capacity for oversight can be a tremendous check on the executive when it is employed. Oversight hearings require officials to appear and testify under oath and report what the administration is doing. Oversight programs demanding reports on executive department or agency activity can also have some bite. Congress has the responsibility to keep a careful eye on the administration of its laws to ensure that they are properly interpreted and executed.

Another management tool of relatively recent creation is the Executive Office of the President (EOP), better known as the White House Staff. President Franklin Roosevelt established this “mini-bureaucracy within the bureaucracy” with Congress’ consent in 1939 as an attempt to centralize control over the executive branch and to provide unity and direction to the federal government. The EOP includes both the professional staff working in such places as the National Security Council.
and the Council of Economic Advisers as well as the president’s most trusted advisers in the White House Office.\textsuperscript{15} The two tools are closely related as presidential appointments have increasingly become subject to intense vetting in the EOP.

Figure 1. Key National Security Powers as Enumerated in the Constitution.

In national security affairs and the conduct of foreign policy that might result in the use of armed force, the President draws on the authority vested in him as Commander-in-Chief. However, the Framers were in agreement that significant war-related powers must also reside in the Congress. Indeed, as Table 1 indicates, Article I, Section 8 lays out extensive and explicit war-related powers
granted to the Congress. The Declaration of Independence and Bill of Rights both reflect the Framers’ distrust of standing armies unaccountable to a legislature. Their design of American democratic institutions separating the power to declare war from the power to command or direct military forces in wartime was meant to ensure that the President was unable to make war alone. It is important to note that rather than giving the President the power to declare war with the “advice and consent of the Senate” as they had done with the treaty power, the Framers deliberately elected to give Congress the sole authority to declare war. The historical record shows that in practice Congress has not been the initiator of all significant military actions and that there has been a struggle for power between the two branches over war powers.

This brief survey of constitutional powers relevant to the conduct of national security policymaking highlights the Framers’ intent for policymaking and implementation to be a shared process across the legislative and executive branches. The Framers’ design of shared and separate powers resulted in a policymaking framework that requires both cooperation and coordination to achieve anything of real significance in national security affairs.

INSTITUTIONAL COMPETENCIES

The Framers’ final product reflected an understanding that the institutions they created had distinct and complementary institutional competencies. While Congress was granted important powers ensuring it a significant role in the conduct of national security policy, its institutional design also meant that it would almost never move quickly on such matters. The requirement for legislation to clear both the House and the Senate after potentially lengthy deliberations in each body subject to the influences of public opinion and the media, favored Congress’s role as the branch of government that considered diverse viewpoints, deliberated among them, and remained accountable to the public.

The executive branch, on the other hand, was designed to move with speed and dispatch. An appropriate amount of secrecy was presumed in order to conduct day to day foreign and security policy, and to act decisively in crisis situations. Congress’ design, meanwhile, has afforded it significant oversight checks as well as policy influence in the power of the purse. The Framers’ deliberate consideration of institutional competencies when deciding which powers should be shared, which should be held alone, and in which branch power should be placed is evident in the Framers’ debate on the distribution of war powers at the constitutional convention. Early deliberations argued that Congress should be given the power to “make war.” However, it was eventually agreed that this should be changed to “declare war” to clarify and ensure that the actual conduct of war remained an executive function, maximizing the institutional competencies of the Presidency during wartime.

PRESIDENTIAL POWER AND PERSUASION

Formal powers contribute to and limit the influence wielded by the President and Congress in any specific policymaking scenario. Informal powers of each branch, on the other hand, if astutely employed, can significantly enhance the influence of either institution. The struggle for influence is characterized neither by all-out competition nor by perfect consensus. Congress can be both a potential adversary and key partner in the formulation and conduct of national security policy. Conversely, the President and his team cannot sustain any national security policy course without the support of Congress and the American people. Dominating the political agenda requires that the President build popular support, work effectively with Congress, control the vast federal
bureaucracy, and know when and where to invest political capital. Presidential leadership and the Administration’s articulation of a vision underpinning its foreign and domestic policies are keys to success as well.

The President and Congress are at once so independent and so intertwined that neither can be said to govern save as both do. And even when they come together they face other claimants to a share in governing: the courts, the states, the press, the private interests, all protected by our Constitution, and the foreign governments that help to shape our policy.\(^\text{17}\)

Although the President is the single actor in the American political system granted the greatest range of formal powers, the ability to make his will prevail among the competing wills of actors also vested with significant powers depends on skillful presidential leadership. President Harry Truman once remarked that presidential power really just boils down to the power to persuade.\(^\text{18}\)

The renowned presidential scholar, Richard Neustadt, in his classic text, *Presidential Power and the Modern Presidents*, equates presidential power with influence and seeks to explain its sources and the contexts where presidential power is more or less dominant.

Scholars differentiate between situations where the President can essentially command and those in which he must rely on his powers of persuasion. If the issue involves presidential authority that is not shared with a competing entity, then the desired result may be achieved without resistance. Examples include the relief of a military commander, the use of an executive order to advance an unpopular policy, and the deployment of military forces to protect American interests.

President Truman’s relief of General Douglas MacArthur in 1951 is probably the most well-known dismissal of a military commander in the modern presidency. Truman was careful to consult the Joint Chiefs in the matter, who unanimously agreed that MacArthur should go. Truman implemented the order in a successive delegation of authority from him through the appropriate military authorities. The President and the Chiefs viewed MacArthur’s public statements critical of Truman’s war policy, in the face of strict orders not to publicly comment on administration policy, as open defiance of the Commander in Chief. This insubordination consequently justified his dismissal as essential to maintaining civilian control of the military. There was no question in the MacArthur affair that the President, in his Commander-in-Chief role, had the authority to dismiss a commander in the field. However, congressional critics of Truman’s Korean Policy and MacArthur’s Republican supporters used the opportunity to conduct a full-fledged congressional investigation of the government’s foreign and military policies against a domestic backdrop that featured a grand tickertape parade honoring the relieved general, MacArthur’s address to a Joint Session of Congress, and an adoring public passionately opposed to the ouster of an American icon.\(^\text{19}\) Truman’s actions consequently were offset by the exertion of informal powers inherent in the Congress, the press, and the people, which shaped the ultimate political impact of the President’s actions.

The issuance of an executive order is another strategic tool presidents can use to assert presidential authority. Eisenhower’s use of federal troops to enforce the orders of a Federal Court to desegregate Little Rock schools in 1957 illustrates a President’s prerogative to assert his constitutional power over the state militias, a power that is not shared with another constitutional entity. The President’s decision to federalize the Arkansas National Guard troops originally called into action by Governor Orval Faubus to halt the integration of Central High School was clear, unambiguous, and highly public. The President’s assertion of power featured a “sense of legitimate obligation, legitimately imposed.”\(^\text{20}\) As in the MacArthur case, to have not exerted the authority would have resulted in its erosion and the prevalence of less legitimate sources of power in the American political system.

Executive orders have mainly been used in three areas: to combat various forms of discrimination against citizens, to increase White House control over the executive branch, and to maintain secrets.\(^\text{21}\)
When Congress perceives that executive orders are taken to bypass Congress on controversial issues, they may elicit great political controversy and be a source of conflict between the two branches. This is why the congressional reaction to President George W. Bush’s series of executive orders authorizing the National Security Agency (NSA) to eavesdrop on the conversations of Americans without warrants as required in the Foreign Intelligence Surveillance Act (FISA) has been uncharacteristically strong. Members of Congress on both sides of the aisle saw the action as a challenge to the Congress’ power vis-à-vis the executive.

Even the prospect of an executive order being issued can erupt in major political controversy as was the case with President Bill Clinton’s proposal to lift the ban on gays serving in the military. There was no question that the President had the legitimate authority to issue such an order as President Truman had done to integrate the armed forces in 1948, but the political backlash was so strong in 1993 that President Clinton abandoned the idea in order to salvage his domestic agenda before Congress.22

While the President’s formal powers are significant, presidential leadership is more often dependent on the President’s power to persuade others that what he wants of them is also compatible with the pursuit of their own interests. The successful launching of the Marshall Plan is an example of a President with minimal political capital achieving a critical foreign policy goal through the effective use of the informal powers of his office. Truman faced the uphill battle of convincing a Republican and traditionally isolationist Congress and a Treasury department focused on controlling spending, that massive European aid deserved their support. The domestic political context in 1947 was further characterized by animosity over Truman’s veto of the Republican leadership’s key legislative initiatives and the assumption that Truman would be easily defeated in the upcoming 1948 presidential election.

He had a key advocate in the figure of General George C. Marshall pushing for the plan that bore his name from State and the support of the Republican Chairman of the Senate Foreign Relations Committee, Arthur Vandenberg. All the resources of the administration were unleashed to back the plan and special care was taken to meet the terms Vandenberg insisted on to maintain his support, which included frequent personal meetings with the President and Marshall and extensive liaisons between Congress and the agencies involved with implementing the plan. Truman even deferred to Vandenberg’s choice of a Republican to head the new agency created to administer the program. These “bargains” subsequently resulted in key players lending their prestige and influence to make the proposed European Recovery Program a reality.23

The few cases discussed here highlight the linkages between presidential power and effective presidential leadership. The American political system’s institutional design, with its unique blend of shared and separate powers, means that key actors often have divided loyalties, a result of serving multiple masters in government. Even players within the executive branch are also responsible to Congress and have allegiance as well to their staffs and departments to represent their bureaucratic interests. Fulfilling the President’s policies, in addition, necessarily involves interagency cooperation and overcoming the disparate bureaucratic interests of each. Presidential power is as much a function of personal politics as it is of formal authority or position.24

CONGRESS: DOES AN EFFECTIVE CHECK REMAIN ON PRESIDENTIAL POWER?

Most texts examining the extent of the presidential-congressional partnership in national security policymaking cite the constitutional scholar Edwin Corwin’s musing that the Constitution “is an invitation to struggle for the privilege of directing American foreign policy.”25 What does the historical record suggest about the President’s capacity to dominate national security policy? Is the
American political tradition that Congress defers to the Executive in foreign and security policy, weighing in with countervailing powers only by exception? Can Congress regain its lost clout and limit presidential overreaching?

An objective assessment of the congressional-executive struggle over the control of national security policies will reveal several findings. First, American history is replete with examples of serious Congressional quarrels with the President over the conduct of foreign policy. Second, periods of deference to the executive have been limited, and even then, included at least tacit approval of the basic parameters of U.S. foreign policy. Third, as a result of congressional reforms in the 1970s Congress gained an increased capacity to challenge presidential policies with the creation of the Congressional Budget Office, the Congressional Research Service, and the expansion of personal and committee staffs. These tools boosted the Congress’ analytical ability and contributed to more enhanced oversight of foreign policy and a greater trend toward legislating specific aspects of foreign policy. Finally, the congressional-executive relationship on use of force issues seeks a comfortable equilibrium. Periods of congressional acquiescence are often interrupted by perceived executive overreach that leads to the reassertion of congressional authority. Such was the context for the passage of the War Powers Act in 1973.

However, the net result of this struggle over time has been what one report called “the executive’s slow-motion coup” made possible by Congress, itself, which has been complicit in its own diminution of power instead of guarding its institutional prerogatives. Even though Congress periodically fought back with such measures as the War Powers Act and the enactment of FISA in 1978, enforcing the oversight provisions mandated in these initiatives has been uneven amounting in the overall concession of power to the executive. Some question whether it is even possible in the current political environment of polarized politics favoring partisan loyalties over institutional obligations to correct the imbalance between congressional and executive power.

ENTER THE JUDICIARY: WILL IT ACT TO RESTORE THE BALANCE?

Beginning with George Washington, presidents have drawn on the institutional competencies of the executive and formal powers to play an active and assertive role in foreign affairs and national security issues. President Thomas Jefferson essentially conducted the Louisiana Purchase on his own. Abraham Lincoln, citing war powers, governed without Congress and suspended the courts. Franklin Roosevelt oversaw the establishment of a plethora of federal agencies empowered to make policy in their realms in order to lift the country out of the Depression. Justice Robert H. Jackson’s 1952 decision has been cited in the debate over President George W. Bush’s use of presidential power. Justice Jackson rejected President Harry Truman’s claim that as Commander-in-Chief he had the inherent power to seize the nation’s steel mills. This decision has been cited as precedent for future Supreme Court deliberations of the issue. Justice Jackson’s framework for judging the constitutionality of assertions of executive power is outlined below and was at the center of the confirmation hearings of Justices John Roberts and Samuel Alito. Many believe that many aspects of the question of presidential overreach will come before the Supreme Court, giving the Court a unique opportunity to reshape the balance between the executive and Congress.

Three Political Contexts.

Justice Jackson laid out three possible political contexts characterizing congressional-presidential relations in the national security arena. First, presidential power is maximized when the President acts pursuant to the express or implied authorization of Congress in a given area. In such periods of
concordance, presidential leadership is virtually unchallenged. Such cooperation may be attributed to agreement over the major policy decisions in play. Presidential power has also been at its height during times of national crisis and war. Lincoln largely got his way in the conduct of the Civil War. In the 20th century, Woodrow Wilson until 1919, and Franklin Roosevelt after 1941, enjoyed an advantage over the control of foreign policy. The postwar era through the mid-1960s was another period of presidential dominance rooted in broad agreement over policy. Harry Truman, Dwight Eisenhower, John Kennedy, and Lyndon Johnson all governed during major wars or at the height of the Cold War, and each had relative control over national security and foreign policy. President George W. Bush contended that the 2001 congressional resolution authorizing the president “to use all necessary and appropriate force” to respond to the September 11, 2001, attacks and to prevent such attacks in the future served as implied authorization for detention and surveillance programs incident to the use of force in wartime. However, it is clear that the Administration and Congress shared sharp differences of opinion over the matter.

Each period of perceived presidential overreach was followed by a backlash or resurgence of congressional power. Following the Civil War, powerful Congresses dominated the Presidency in the late 19th century, and Congress handed Wilson the devastating political and personal defeat of rejecting the Treaty of Versailles with a reassertion of congressional power that resulted in the domination of foreign policy until World War II. The War Powers Act of 1973 was the culmination of Congress’ break with the President over the conduct of the Vietnam War and its reemergence in national security affairs.

Second, presidential independence is possible if Congress is indifferent or acquiesces in a particular policy area. In this political context Congress falls short of playing the role of constructive partner to critique, build support for, and improve on the President’s foreign and security policy. Many factors may contribute to such a scenario. There is a tendency in Congress to view foreign and security policy through domestic political lenses or from the perspective of special interests, which may both be barriers to judging foreign policy initiatives on the basis of the national interest. Presidential independence may also be possible simply because Congress is not paying attention to the administration’s policies. Domestic issues often dominate the congressional agenda in peacetime. Furthermore, Congress may neglect its responsibilities in foreign affairs and devote too little time to rigorous programmatic oversight. In both the concordant and acquiescent political contexts, the President’s leadership is not essential. However, in the third context to be considered, presidential leadership is critical.

Presidential power in security and foreign policy is at its lowest ebb when the administration’s desired action is incompatible with the expressed or implied will of the Congress. An analysis of congressional-presidential relations in the Vietnam War illustrates a dramatic conversion of Congress’ perception of its role in checking presidential war making powers. Its 1964 passage of the Gulf of Tonkin Resolution essentially ceded to President Johnson the “blank check” he sought to deal with the crisis in Southeast Asia. The near unanimous backing in Congress (there were only two dissenting votes in the Senate) gave the President authority to take all “necessary measures” to repel any armed attack against the forces of the United States and “to prevent further aggression.” Johnson’s interpretation of his Commander-in-Chief powers, which President Richard Nixon took to even greater heights as his successor, was an open-ended doctrine permitting the President to order armed forces into combat whenever the President determined that the security of the United States was threatened.

As the administrations’ prosecution of the war continued, Congress retreated from its role of presidential cheerleader and gradually began to reassert its authority. Congressmen increasingly traveled to Southeast Asia in the mid-1960s to take stock of the war, the Senate Foreign Relations
Committee held televised hearings in 1966 and by the early 1970s Congress changed its rules for considering defense appropriations bills so that individual amendments attempting to limit or influence the policy could be considered without rejecting the entire defense appropriations package. Continuation of presidential dominance was challenged in the face of a growing majority’s disagreement with the Vietnam policy. Even broader consensus that the Nixon Administration had overreached with the assertion that the executive had unlimited discretionary authority as Commander-in-Chief to send American troops into action around the world, led to the passage of the War Powers Act.

The act established procedures in three main areas: presidential consultation with Congress, presidential reports to Congress, and congressional termination of military action. Congress’ intent was to assert its authority via procedural constraints limiting the ability of the President to commit U.S. forces abroad. The act called for the President to consult with Congress “in every possible instance” before introducing U.S. forces into hostilities or imminent hostilities, declared that the President must report to Congress within 48 hours when such forces are introduced, and mandated that forces be withdrawn within 60 to 90 days unless Congress authorizes that they remain.

The continuous shifting between the political contexts discussed above is indicative in the ambiguous role the War Powers Act has had since its passage. President Nixon rejected it out of hand with his veto of the measure in 1973. Congress shot back with its overwhelming override asserting its intent to expand its influence in national security policy making with measures beyond the blunt instrument of withholding funds.

In practice, Congress has not consistently asserted the authority granted in the act. Presidents, meanwhile, have been careful not to acknowledge the law’s constitutionality, while avoiding direct confrontations with Congress over its provisions. In fact, Congress has managed to get the President to honor the War Powers Act only once, in an obscure 1975 Marine action to recapture a tanker off the coast of Cambodia. Depending on lawmakers’ overall view of the President’s proposed intervention, they may sit on the sidelines or strive to be consulted. Presidents continue to insist on flexibility and may seek Congress’s explicit authorization for an impending action, but without admitting that such action is being taken in order to comply with the Act. There is, however, an acceptance, if grudgingly, that the War Powers Act stands as a reminder of the ultimate need to get at least congressional acquiescence, and, ideally, congressional approval for the commitment of troops.

The controversy surrounding President Bush’s domestic surveillance program illustrated the political context of expressed disagreement between the Administration and Congress. This raised the ire of the usually acquiescent Republican Congress because it sidestepped the oversight provisions outlined in FISA. The Republican Chair of the Senate Judiciary committee, Senator Arlen Specter, conducted hearings to dispute the Administration’s claim that its broad powers to fight terrorism overrode specific legislation prohibiting warrantless eavesdropping. Attorney General Alberto Gonzales testified before the Judiciary Committee in February 2006 that the Administration reasonably interpreted the 2001 authorization of force resolution as the legal justification for its actions. However, when two laws seem to come in conflict, the law which is more specific tends to prevail unless a law meant to supersede an earlier one specifically includes language to the contrary. The FISA debate was unique because it brought together elements of wartime presidential powers within the context of actions contrary to “the express will of Congress.” Indeed Senator Lindsey Graham warned Attorney General Gonzales that the Administration’s expansive interpretation of the 2001 resolution may make it “harder for the next president to get a force resolution if we take
this too far.”

Two years later when Gonzales’ replacement, Michael Mukasey, appeared before the Judiciary Committee its chairman expressed his frustration that lawmakers have been almost completely unsuccessful trying to hold the executive branch accountable for its actions on the issues of torture, the CIA’s destruction of interrogation videos, and White House claims of executive privilege, and the “terrorist surveillance program.” Senator Specter vented to Attorney General Mukasey, “Congressional oversight has been so ineffective, notwithstanding Herculean efforts for the last three years. The courts provide a balance, a separation of powers. . .the only effective way of dealing with what is argued to be executive excesses is through the courts.” Congressional angst notwithstanding, the current balance of power between the executive and Congress is likely to stand unless the courts address the alleged executive excesses.

Keys to Effective Presidential Leadership.

The executive branch’s institutional competencies make the President the most important actor in foreign and security policy. The President, alone, has command of the bully pulpit to give him an unrivaled voice in policy debates. The President is also the actor in the American political system best positioned to consider the national interest. Since World War II, control over foreign and security policy has increasingly been centralized in the executive. The government’s expertise for formulating and implementing foreign and security policy is largely resident in the Department of State and the Department of Defense, with the National Security Council also assuming an increasing amount of authority and influence—all three components of the executive branch. Yet effective leadership is not a given. Perhaps the broadest and most common sense recommendation comes from presidential scholar Paul Quirk, who contributes the concept of “strategic competence.” Quirk argues that presidents must have a well-designed strategy for achieving the competencies they need to effectively lead. In this view, the key competencies to be mastered are policy substance, policy process, and policy promotion. Policy expertise results from years of attentive engagement in the major national issues. The development of direct in-depth personal competence in policy areas is necessarily selective, but a base knowledge of the key issues is essential to the president’s recognition of the elements of responsible debate and to responsible decision-making. Anything less than this, Quirk argues is minimalist and may impede intelligent decision making.

A minimalist president. . .will not fully appreciate his own limitations. By consistently neglecting the complexities of careful policy arguments, one never comes to understand the importance of thorough analysis. In politics and government, at least, people generally do not place a high value on discourse that is much more sophisticated than their own habitual mode of thought.

To lead effectively, presidents must also be competent in the processes of policy making. The President sits atop a system of complex organizational and group decision making processes and must ensure that the Administration has put in place reliable decision making processes. The major threats to effective national security policy making processes are intelligence failures, groupthink and other malfunctions of the advisory process, and failing to effectively coordinate within the interagency process and beyond the executive branch as appropriate. Finally, building coalitions with congressional leaders and key interest groups, and using the bully pulpit to take the case to the public are essential ingredients for effective policy promotion once policy decisions have been made.

Lee Hamilton offers his advice for effective presidential leadership in foreign and national security policy from his perspective as the former chairman and long time ranking Democrat on the House Committee on International Relations. Presidents must make foreign policy a priority
and set forth a day-to-day course that is driven by an overall strategic vision. Hamilton argues that the foreign and security policy arena is uniquely dependent on the President’s attention and leadership. Too often an issue receives intense attention and scrutiny for a short time, but then the Administration fails to remain sufficiently focused or to expend the requisite resources to achieve success. The President is also uniquely positioned to forge the personal relations with foreign heads of state that are critical to alliance building and to articulate U.S. policies and the associated national interests with clarity to the American people.46

In a system of shared and separate powers in national security policymaking, successful policy will rarely be the result of strong-arming the Congress or the American people through the overplaying of formal powers. The Supreme Court is extremely reluctant to check the President’s power while a war is in progress. Presidential leadership in national security policy making effectively blends presidential authority with a consideration of the institutional competencies that the rival branch brings to the development and execution of strategy.

As the most accessible and representative branch of government Congress can help mediate between the American people and the foreign policy elite. Through the hearings process, Congress can also help to educate the public on complex foreign and security policies. Testifying before the appropriate committees also forces the Administration’s top officials to articulate and defend their policies. However, some observers are concerned that this check on executive power is being weakened by an Administration reluctant to make senior officials available for sworn congressional testimony or to provide documents to relevant committees, citing the confidentiality of executive branch communications.47

Debates over contentious and weighty matters of national security, such as whether or not to authorize the use of force, engage the public and strengthen the policy process. Passing legislation in support of the Administration’s policies can also help to strengthen the President’s hand before international bodies, adversaries, and allies. In the case of the Gulf War, Congressional leaders insisted on being consulted and on debating the issue before authorizing the use of military force. President George H.W. Bush, however, feared that weak support or a split vote would be worse than no vote at all and might actually weaken his hand in the face of Iraqi aggression. President Bush maintained throughout the period of congressional consultation that regardless of the outcome in Congress he still had the constitutional right to commit U.S. forces to battle. In the end, the Congress passed the resolution with a clear victory in the House, 250-183, and a squeaker in the Senate, 52-47.48 Effective presidential leadership in foreign and security policy recognizes Congress’ constitutional role in the process and seeks ways to ensure that sustained consultation is a characteristic of the executive strategy for interacting with Congress.

CONGRESSIONAL-PRESIDENTIAL COLLABORATION IN THE WAR IN IRAQ

The open-ended resolution Congress passed in October 2002 granted the President broad authority to use any means he determined necessary and appropriate—including military force—to respond to any security threat posed by Iraq.49 Critics contended that in contrast to the 1991 appeal of President Bush’s father to authorize force on the eve of conflict when key conditions related to its prosecution were well known, “The president is asking Congress to delegate its constitutional power to declare war before he has decided we need to go to war, but he has not adequately explained what this war will look like.”50 Others argued President Bush’s request was constitutionally inappropriate because it was seeking a conditional grant of power, leaving in the President’s hands the decision to change the nation into a state of war. These critics contend that a nonbinding resolution declaring support for the President’s efforts to make Iraq comply with UN resolutions followed by the authorization to use force if peaceful means fail may have been more
appropriate. Such a two-step approach would have left Congress in the loop up until the point when the President was ready to begin military action.51

Although some Republicans had concerns about endorsing the new doctrine of preemption, they deferred to the President. With the mid-term elections only weeks away, many Democrats felt pressure to “get this question of Iraq behind us” so they could return to other issues that they thought would be successful for them in the elections. At the height of the House debate, less that 40 members could be found on the floor. On the Senate side no more than 10 senators were in attendance. The resolution passed 296 to 133 in the House and in the Senate 77 to 23.52

Observers noted that the debate over the Iraq war was a pale shadow of the Senate’s more vigorous role in the past. Congressional scholar Norman Ornstein commented on the Senate’s role on the eve of the Iraq war, “The Senate is struggling to find an appropriate role to play. I think you’d be hard-pressed to suggest the Senate is a great debating body — on anything.”53 The concordant-acquiescent political context that has characterized congressional-presidential relations since the September 11, 2001 terrorist attacks may have contributed to executive overreach in ways that ultimately weakened President George W. Bush’s ability to sustain support for his Iraq strategy.

The political environment in the run-up to the War in Iraq was conducive to the executive “going it alone” vis-à-vis Congress. Although the Congress put up little resistance over the open-ended resolution to use force in Iraq, this support occurred within a climate of some angst on the Hill over the Administration’s attitude toward the role of Congress in defense policy. Congressmen of both parties complained that Secretary of Defense Rumsfeld “tells lawmakers little and demands immense discretion.”54 Complaints continued throughout the Bush Administration accusing it of thwarting Congress’s investigative authority. Some lawmakers were frustrated that their attempts to get more information about the Administration’s impending war plans and strategy came up empty. Administration officials were unable to answer with any specificity questions related to the cost of the war or of the reconstruction effort to follow before lawmakers cast their votes.

Some members of Congress demanded to hear the Administration’s plans for the postwar occupation, but were denied such consultations based on the argument that it would not be proper to plan for the aftermath of a conflict that the President had not yet decided to fight. The “ends” that the President advanced shifted among competing candidates, eventually settling on the need to disarm Saddam Hussein and dismantle the imminent threat that his weapons posed.

Scholars pointed out that the doctrine of pre-emptive military strikes added a “new wrinkle to the Imperial Presidency,” because the trigger for the use of force is classified intelligence.55 Richard Durbin, a member of the Senate intelligence committee, complained that an insufficient body of intelligence was declassified in the run-up to the vote on Iraq hindering the ability of his colleagues to make an informed vote.

The choice to maximize the powers of the presidency, while marginalizing the participation of Congress may have put the strategy at risk. Congress shares responsibility for the policy due to its decision to support the open-ended resolution. However, the emphasis on regime change through invasion without laying out all aspects of a comprehensive strategy complete with clear strategic ends, a thorough explanation of the ways or courses of action the Administration would pursue to achieve the ends, and a good faith estimate of the means or cost to the American people in terms of lives and treasure made it more likely that the Administration would be on the defensive when the strategy ran into difficulty.

Indeed, in September 2003, when the Bush Administration finally delivered the first major bill for the war to Congress in the form of a request for $87 billion dollars to fund Iraqi reconstruction and the military operations in Iraq and Afghanistan for the remainder of the fiscal year, Congress pushed back mightily. Pent up frustration over the lack of collaboration with the legislative branch was
Senator Diane Feinstein remarked, “We want to be good Americans. We want a bipartisan foreign policy. We know the time is tough. We want to be with you. But there’s a feeling that you know it all. The administration knows it all. And nobody else knows anything. And, therefore, we’re here just to say, ‘Yes, sir. How high do we jump?’ And at some point we refuse to jump.”

More direct was Senator Robert Byrd’s comment to Deputy Defense Secretary Paul Wolfowitz, “Congress is not an ATM. We have to be able to explain this huge, enormous bill to the American people.”

The Administration sustained another wave of attacks in January 2004 when its Chief Weapons Inspector in Iraq, David Kay, concluded that there were no large stocks of weapons of mass destruction (WMD) in Iraq before the war. “Based on what I’ve seen is that we are very unlike to find stockpiles, large stockpiles of weapons. I don’t think they exist.” “It turns out we were all wrong.” Democrats charged this was further proof the war was based on false premises. Lawmakers on both sides of the aisle took issue with the certainty of the language that Administration officials used with regard to the pre-war intelligence and some questioned whether Administration officials misled them.

Members of Congress complained that the Director of Central Intelligence, George Tenet, gave his personal assurance in closed-door hearings that WMD stocks would be found in Iraq. “He was telling the senior people in the Administration . . . that the weapons were absolutely there, that they were certain the stuff was there.” Ohio Senator Mike DeWine, a Republican on the Intelligence Committee, told the Columbus Dispatch, that he was not sure he would vote to authorize war with Iraq if he had to do it all over again. Meanwhile, on the 2004 campaign trail, Democratic presidential candidates took aim at the Administration. “We were misled not only in the intelligence but misled in the way that the President took us to war,” the Democratic front-runner, Sen. John F. Kerry (MA), said when asked about Kay’s conclusions.

The Administration’s critics faulted the lack of consensus building and derided its unwillingness to collaborate with either international allies or its domestic partners in the national security policymaking process. As the popularity of the Iraq War wanes in the face of its $500 billion price tag by early 2008 and deaths of American servicemen creep upward of 4000, the Bush Administration stands undeterred in its approach to executive power. The sweeping assertion of the powers of the presidency is grounded in a belief that the full power of the executive must be restored in order to prevail in the War on Terrorism. Leaving the Congress and the Courts in its wake, however, is at least politically flawed and may provoke a reaction from these bodies that ultimately cuts back on presidential powers.

Supporters of the Administration, on the other hand, laud the resurgence of presidential power and maintain that the Administration’s approach is merely a corrective action necessary to reverse the erosion of presidential prerogatives in recent decades. According to this view, the Administration’s approach is to be admired as a model in presidential leadership,

To achieve all this, Bush staged one of the most impressive exercises of presidential power in modern times. He used all the tools at hand: the bully pulpit, TV, personal persuasion in the Oval Office, and the skillful deployment of top officials in his administration. And, not to be underestimated, there was sheer presidential bullheadedness. When a president takes a firm and defensible position and doesn’t flinch, he normally prevails.

One telling result of Bush’s full-throttle use of his presidency was a far greater percentage of Democratic support for his congressional war resolution than the elder President Bush won in 1991 after Iraq had invaded Kuwait.

Is President Bush’ leadership vis-à-vis Iraq firm, resolute leadership appropriate to the national security challenges inherent in fighting the security threats facing the United States in the twenty-first century or imperial presidential overreach, that if continued, will ultimately lead to a failed strategy for fighting the War on Terrorism? The historical record indicates that policy is strengthened when
each branch understands its proper role, powers, and limitations in foreign policy. An analysis of the case of the war in Iraq suggests that both branches have fallen short of this ideal.

CONCLUSION

The American republic’s very essence lies in its allocation of power across the political system. The Founders envisioned a struggle for power between actors enabled with competing powers to keep each other in check. That such struggles continue is a testament to the continued viability of the founding blueprint. In the current political environment, the backdrop of national security seems to present an obstacle to the balanced interplay of the President, Congress, and the Courts. But the Founders’ institutional design was undertaken with a realistic expectation that national security matters could be at the heart of power plays among the government elite placed in each of three empowered branches. Liberty could not be forfeited, the Founders assumed, unless key actors chose not to employ their countervailing power to preserve it. Security, meanwhile, would depend on the adoption of an effective strategy for victory. At the early stages of the “Long War,” balancing the quest for security with the preservation of liberty requires a collaborative employment of the national security powers that the President, Congress, and the Courts share.

Effective conduct of national security policy depends on understanding one’s power, its limits, and the recognition that other actors’ actions also shape the policy battlefield. Successful national security policy exploits the institutional competencies that the Framers designed into the American political system. Coordinated efforts that link the President’s national security policy initiatives with Congress’ unique capacity to vet the policy, educate the public, and ultimately lend its support are more likely to lead to successful strategy. Such policy must also withstand the scrutiny of the Courts empowered to rein in the President or Congress when either entity oversteps its allocation of power. Successful policy implementation, furthermore, is reliant on competent executive decision-making, efficient bureaucratic processes and the keen oversight of lawmakers, the media, and the American people.

The five Chairmen of the Joint Chiefs of Staff since 1990—Generals Powell (1989-1993), Shalikashvili (1993-1997), Shelton (1997-2001), Myers (2001-2005), and Pace (2005-2007)—used an unclassified national military strategy to provide advice on the military’s strategic direction to the President and Secretary of Defense and communicated that direction to Congress and the American people. The Chairman’s responsibilities as the nation’s senior military advisor to provide this strategic advice, along with many other tasks, are specified in Title 10 U.S. Code. These increased responsibilities were a result of the 1986 Goldwater-Nichols Act (GNA), considered to be the most significant piece of defense legislation since the National Security Defense Act of 1947 that established the Defense Department.1 The GNA was the result of almost 4 years of somewhat contentious dialogue and debate among Congress, military leaders, the defense intellectual community, and the Reagan administration on how best to organize the Defense Department to strengthen civilian authority, improve military advice to civilian leaders, provide for more efficient use of resources, and better execute in the field to respond to the nation’s security challenges.2

While this chapter will discuss the strategic environment each Chairman faced in more detail as it analyzes these four strategies, the first three Chairmen were challenged by an environment that began with the Gulf War and continued with an increasing number of other regional military operations across the spectrum of conflict as the decade progressed. They had to meet these challenges while accommodating slowing declining financial resources and a Cold War equipped force reduced by about one-third. Since 2000, and particularly after September 2001, the last two Chairmen faced different security challenges dominated by the focus on terrorism, as most evidenced by the wars in Afghanistan and in Iraq, while needing to simultaneously transform by developing future capabilities to achieve the vision of full spectrum dominance. They had to meet these challenges with greater financial resources, better technology, and with a greater reliance on activating Reserve forces to meet operational force requirements.3 The four national military strategies were the key formal way each Chairman advised the nation’s leaders on how best to meet these challenges, which are summarized in Figure 1.

Figure 1. Chairmen’s Strategic Environment.

This chapter will focus on the Chairmen’s leadership challenges since 1990, and how they developed and used four different national military strategies in 1992, 1995, 1997, and 2004 to respond to those challenges. This chapter describes in broad terms the strategic environment
facing each Chairman, as it formed the basis for his subsequent military strategy. Then each of the strategies’ key components, which were organized around an ends, ways and means construct, will be examined. The assertion is that formal direction provided by these strategies was an important aspect of each Chairman’s leadership legacy. Since each military strategy was part of and perhaps the key integrating component of an overall strategic planning system, the chapter begins by briefly examining this planning system’s integrating nature and other key characteristics.

JOINT STRATEGIC PLANNING SYSTEM

The Chairman’s strategic planning system integrates the processes and documents of the people and organizations above him (President, Secretary of Defense, and National Security Council) and the people and organizations with which he directly coordinates (Services, Agencies, and Combatant Commanders). The Chairman has no control over any significant defense resources (Secretary of Defense, Services, and Agencies control resources) or direct control of operational military forces (Combatant Commanders control operational forces); however, orders to those forces flow through the Chairman. The Chairman formally influences his civilian leaders and those with whom he coordinates through the processes and documents developed from this strategic planning system. In addition to influencing leaders, this planning system provides insights and specific direction for the many staffs that support these leaders. As such, the Chairman’s Joint Strategic Planning System formally evolved four times during this 16-year period in 1990, 1993, 1997, and 1999. It is the Chairman’s key system that integrates the Nation’s strategy, plans, and resources that consist by FY 2007 of approximately 2.2 million active, guard, and reserve forces and total defense outlays of $572B.4

1989 Status.

Prior to 1990 there were 10 rather large and primarily classified strategic planning products that were described as voluminous, somewhat stove-piped, and highly bureaucratic, but this was indicative of strategic planning products produced in the late 1980s.5 The Senate Armed Services Committee called this style of strategic planning ineffective, and the former Chief of Naval Operations, in remarking on a strategic planning document, stated it was “. . . almost as valueless to read as it was fatiguing to write. . . . a synthesis of mutually contradictory positions that the guidance they gave was minimal.”6 Chairman Powell recognized these deficiencies and streamlined the system when he published Memorandum of Policy No. 7 on 30 January 1990.7

1990 Change.

The 1990 change added a front-end leader’s guidance while eliminating or combining many other documents as ten planning products were reduced to four. The front-end guidance was designed to be documented through a formal joint strategy review for “. . . gathering information, raising issues, and facilitating the integration of strategy, operational planning and program assessments,” that culminated with publishing Chairman’s Guidance.8 This concise document (6 to 10 pages) was structured to provide the principal, initial direction to develop the planning system’s next three documents: the National Military Strategy Document, Joint Strategic Capabilities Plan (JSCP), and the Chairman’s Program Assessment. The classified National Military Strategy Document (NMSD) was to be developed under a rigid 2-year cycle with several parts, one of which was a National Military Strategy. In addition, there were seven functional annexes added to this document, such as intelligence and
research and development that in total comprised hundreds of more pages. The part of the NMSD called the National Military Strategy (also classified) would be sent to the Secretary of Defense for review and forwarded to the President for approval before returning to influence defense resource guidance.

1993 Change.

Chairman Powell again revised this planning system in March 1993 by publishing the first change to his earlier Memorandum of Policy No. 7. This change essentially codified what was executed in previous years rather that designing a new system as had been done in 1990. This revised system included the following guidance: Place more focus on long-range planning by requiring formal environmental scanning to determine what challenges the strategy needed to consider; issue the National Military Strategy as an unclassified document designed to communicate with the American people rather than providing internal military direction; establish a Joint Planning Document to sharpen the Chairman’s advice to the Secretary of Defense on how to resource the strategy; and keep the JSCP, which directs plans to implement that strategy in the field, the same.

1997 Change.

Chairman Shalikashvili made the next revision to the strategic planning system in September 1997 when he published a Chairman Joint Chiefs of Staff Instruction 3100.01. This instruction again reflected changes he instituted in prior years rather that formally changing the system before execution. He kept the national military strategy as an unclassified document produced in a flexible manner that looked out about five years, but he added the 1996 Joint Vision 2010 to provide longer range direction not covered by his strategy. He also added the Chairman’s Program Recommendation to provide leader-focused resource advice to implement both the strategy and vision. Again, the JSCP was left unchanged.

1999 Change.

Chairman Shelton made the final formal change to the strategic planning system in September 1999. He did not change any major processes or products. Instead, he placed more focus on Theater Engagement Plans to integrate the strategy’s shape component and on implementing the 1996 Joint Vision to better support the strategy’s prepare component. This vision process involved identifying specific 21st Century security challenges and the desired operational capabilities to meet those challenges, all of which provided joint direction to conduct operational experiments and influence resource decisions. Overall, this process change resulted in improvements to better execute the national military strategy. These four changes from 1989 to 1999 are portrayed in Figure 2.

While Chairman Myers made no official changes to the 1999 operating instruction that describes the strategic planning system, the formal system has not been completely followed since the early 2000s. In execution, General Myers published three new strategy-related documents, kept four existing planning products to include the unclassified national military strategy, and cancelled the separate vision and staff-resource advice products. The three new strategy-related products he added were: a classified 2002 and later 2005 *National Military Strategic Plan for the War on Terrorism* to provide more guidance to the military’s effort to execute the nation’s strategies associated with terrorism; a classified *Chairman’s Risk Assessment* that identified to Congress the strategic and military risk to execute the national military strategy; and *Joint Operating Concepts* in 2003, which were revised to the *Capstone Concept for Joint Operations* in 2005. These last two documents identified future concepts and capabilities associated with implementing the vision of full spectrum dominance that was now embedded in the 2004 *National Military Strategy*.

During General Pace’s tenure as Chairman from 2005 to 2007, no formal changes were made to the joint strategic planning system although coordination of a draft instruction was initiated to formally and holistically integrate the many changes made in execution. From a strategy perspective General Pace did not change the 2004 *National Military Strategy* inherited from his predecessor although a biannual review and risk assessment were conducted for 2006 as specified in U.S. Code.
However, in 2006 he published three military strategies on specific subjects that were subordinate to the 2004 *National Military Strategy*. These strategies, the subject readily determined by their titles, were as follows: *National Military Strategic Plan for the War on Terrorism*, *National Military Strategy to Combat Weapons of Mass Destruction* and the *National Military Strategy for Cyberspace Operations*.

On 31 July 2007, the new Chairman, Admiral Mullen, in formally responding to a Senate Armed Services’ question on the appropriateness of the 2004 *National Military Strategy* for his confirmation indicated that its three military objectives: “... were broadly developed to remain relevant to the complexities of the emerging security environment ... and [he] would submit an updated assessment in February 2008 as required by Title 10 Section 153(d).” Furthermore, in his guidance to the Joint Staff in October 2007, Admiral Mullen identified the need for a strategy to manage the U.S. military presence in the Middle East. These two responses by the new Chairman provide insight to his focus on military strategy.

All of these Chairmen’s changes incrementally resulted in the strategic planning system evolving from being rigid and Cold War focused at the decade’s start to being more flexible, vision oriented, and resource focused at the decade’s end. After 2000, the strategic planning system was more focused on the many diverse facets associated with the War on Terrorism and identifying joint force capabilities. Throughout this 17-year period with its changing national security challenges, the unclassified *National Military Strategy* remained the Chairman’s planning system keystone document. Figure 3 is a way to envision this strategy’s importance for the entire strategic planning system, along with what it directs or informs related to resources, concepts, and plans in 2005.16

---

**Figure 3. Strategy — Foundation for all Major Processes.**

At the beginning of 1990, the formal manner by which the Chairman advised the President and the Secretary of Defense on the strategic direction of the Armed Forces was via a classified and rather voluminous National Military Strategy Document (NMSD) and a shorter classified National Military Strategy that was part of this document. Admiral Crowe published these in 1989 to provide guidance for the resource time frame of FY 92 to 97. The process to produce this strategy was also formally linked to the Defense Planning, Programming, and Budgeting System. Hence, this was the strategy and planning processes that General Powell inherited.

The classified 1989 National Military Strategy Document included chapters dedicated to subjects such as: national military objectives, national military strategy, appraisal of U.S. defense policy, intelligence appraisal, fiscally constrained force levels, net assessment options and risk evaluation. In addition to this basic document, there were seven separate classified annexes on functional subjects that supported the strategy in subjects such as intelligence; research and development; and command, control and communications. The size of some of these annexes exceeded the basic document itself as one annex alone had 11 chapters, 13 tables, and 15 tabs. The 1989 strategy focused on the Cold War and the Soviet Union and articulated the military element in many of the worldwide alliances, such as the North Atlantic Treaty Organization. This strategy, which was underpinned with a robust nuclear deterrent, included a forward defense with many forces deployed forward, particularly in Europe and Korea, which were then backed up by rapid reinforcement to dispersed operating bases in many nations.

The demise of the Soviet Union, a broad retreat from ideological support of communism, and an inclusive international coalition that reversed Iraqi aggression in Kuwait characterized the strategic environment that influenced the 1992 strategy. On the positive side, democracy was growing in many parts of the world. On the negative side, regional conflicts, animosities, and weapons proliferation that the bi-polar world and Cold War had previously constrained now had the potential to intensify. In essence this was the new world order, which was a concept articulated by the President Bush in his 11 September 1990 speech to a joint session of Congress and repeated many times later.

The 1992 strategy, which was unclassified and only 27 pages long, was a complete change from the previous one in clarity, conciseness, and strategic direction. While this strategy was published in January 1992, its roots can be traced to the President’s National Security Strategy, the Secretary of Defense’s policies in his Defense Planning Guidance and Annual Report to the President and the Congress, and General Powell’s development of the Base Force. This strategy represented a “... shift from containing the spread of communism and deterring Soviet aggression to a more diverse, flexible strategy that is regionally oriented and capable of responding to the challenges of this decade.” In essence, this was the most fundamental change in the U.S. military strategy since the global containment strategy and Cold War that began in the 1950s. The military’s primary objective was now focused on deterring and fighting regional wars rather than containing a superpower rival.
This strategy was based on the United States providing leadership to promote global peace and security. It was built on the following four foundations: Strategic Deterrence and Defense, which consisted of a credible nuclear deterrent composed of offensive and defensive capabilities; Forward Presence, which consisted of forces continually stationed or deployed worldwide; Crisis Response, which was the ability to respond quickly to more than one regional crisis; and Reconstitution, which involved the ability to mobilize personnel, equipment, and the industrial base to rebuild military strength. The strategy also specified eight strategic principles that reinforced those four foundations. They were: readiness, collective security, arms control, maritime and aerospace superiority, strategic agility, power projection, technological superiority, and decisive force. In concluding, the strategy described how to employ forces and listed the broad military force structure, called the “Base Force,” to implement the strategy.

This Base Force, which was determined earlier, was broadly composed of strategic nuclear forces, Army divisions, Navy ships, Marine expeditionary forces, and Air Force fighter wing equivalents. When compared to the 1991 force structure, the Base Force was significantly smaller by the following representative systems or organizations: 460 missiles and 16 nuclear submarines from the strategic forces; 4 active and 2 Army Guard Divisions; 80 naval ships and 3 Carrier Battle Groups; and 7 Active and 1 Reserve Air Force Fighter Wing Equivalents. The strategy clearly conveyed to the American people, one of the main target audiences if not the most important, why they needed a military and in what size. The American people and Congress were clamoring for a peace dividend as the end of the Cold War sank in and the euphoria of the 1991 DESERT STORM victory ended.

This strategy’s coordination was different than the bureaucratic coordination of other strategic planning documents on the Joint Staff, which illustrated the flexibility in strategic planning General Powell achieved. The strategy, which had undergone a few variations and was interrupted by operational necessity (Gulf War and Soviet internal turmoil) from its conceptual beginnings in 1990 to the end of 1991, was finally published in January 1992. It did not go through a disciplined two-year cycle with its associated annexes and formal assessments as specified by the planning system’s instructions, but more quickly reacted to the strategic environment and Chairman’s leadership needs. A Joint Staff Officer, Harry Rothman, who was part of the process, gave credit to General Powell’s personal relationships and strategic vision of the world that broke down the impediments resident in formal planning processes. He stated that “... people and not the process were more important in the forging of the new strategy.” General Powell spent considerable energy convincing other senior leaders and converting them to his broad views rather than conducting the detailed coordination at junior or mid levels that usually influenced the document’s content.

One other significant aspect about this strategy was the foreword to the document, which illustrated General Powell’s leadership style that combined boldness and humility. The foreword boldly stated that the strategy was his advice, in consultation with other members of the Joint Chiefs of Staff and commanders of unified and specified commands, and that he presented it to fulfill his responsibility under the GNA to provide such advice. Humbly and emphasizing civilian control of the military, the foreword also stated that in determining this strategy he listened to his civilian leadership, as the strategy clearly implemented the President’s and Secretary of Defense’s policies. Clearly, as the first Chairman totally under the GNA, General Powell created a leadership legacy in this strategy’s style and substance, as it was the first unclassified strategy signed by a Chairman. Lorna Jaffe in her detailed examination of the Base Force’s development (a key part of the strategy), concluded that Powell fully used the enhanced authority of the GNA and stated:

While he hoped to win the Services to his point of view, he did not aim for either bureaucratic consensus through staff work or corporate consensus through JCS meetings. He never asked the Service Chiefs to vote on
Rather, he thought it was more important to win the Secretary’s approval.23

The strategic environment at this time was centered on an unsettled world that exhibited both opportunities and threats.24 The following characterized this world: regional instability as evidenced by conflict in the Balkans, Somalia, and Rwanda; concern about the possible proliferation of weapons of mass destruction to hostile regional groups or terrorists from the Soviet Union’s breakup; transnational dangers associated with fleeing refugees, diseases, and crime syndicates; and dangers to nations undergoing transition to democratic reform, particularly those in the former Soviet Union. The strategy developed to respond to these challenges was one of two produced by General Shalikashvili. These strategies looked very similar to General Powell’s in style, but in direction were very different in a few key areas.

The 1995 strategy took guidance from the President’s National Security Strategy of Engagement and Enlargement and defined the military’s two simple main objectives -- promote stability and thwart aggression. While the thwart aggression was embedded in the 1992 strategy, the promote stability objective was fundamentally different than the 1992 strategy. The 1995 strategy described a more active use of the military globally to promote stability rather than to react to instances of instability. To achieve these two objectives the 1995 strategy defined three components: (1) peacetime engagement, which was the broad range of non-combat activities to promote democracy, relieve suffering and enhance overall regional stability; (2) deterrence and conflict prevention, which ranged from conflict’s high end represented by nuclear deterrence to conflict’s low end represented by peace enforcement to restore stability, security, and international law; and (3) fight and win, which the strategy described as the military’s foremost responsibility and defined as the ability to fight and win two major regional contingencies. In essence, the military was expected to become more engaged in conflict prevention to include missions such as peacekeeping, peace enforcement, and nation assistance; missions not mentioned in the 1992 strategy.

The National Military Strategy also identified the military forces necessary to execute the strategy, but earlier work by the Secretary of Defense’s Bottom-Up Review had actually determined the force structure outside the formal strategy development process. While the military missions were growing in non-combat areas, the force structure was decreasing from the 1992 Base Force. For example, active Army divisions declined by two, the Air Force lost six fighter wings, and Navy combatant ships went from 450 to 346.25 In addition, reconstitution, defined in the 1992 strategy as forming, training, and fielding new fighting units along with activating the industrial base, dropped out of the 1995 strategy altogether. Hence, maintaining readiness became ever more important as the force became smaller and was used more frequently. This readiness focus was greatly emphasized by Chairman Shalikashvili, as he used words related to readiness in his annual Posture Statements to Congress with significantly greater frequency than Chairman Powell.26

This strategy’s development was significantly different than the 1992 strategy, as it followed the more flexible processes and overall structure outlined in the 1993 instructions that changed the planning systems. The strategy included information summarized from another strategic planning product, the joint strategy review, and reflected the conceptual outline as defined in the 1993 memorandum.27 This illustrated that formal processes, as well as people, drove this strategy’s development. This also reflected General Shalikashvili’s leadership style, which could be characterized as using interpersonal skills to develop and value consensus and using strategic planning processes to help achieve and implement that consensus.28 In addition, since this strategy
was similar in style to the previous one, an existing strategic planning process could more easily produce an evolutionary vice revolutionary product.

Opportunities and threats again characterized the strategic environment in 1997. The opportunities were the lower threshold of global war and the potential for a more peaceful world. The four principal threats this strategy identified were: (1) regional dangers as primarily represented by Iran, Iraq, and North Korea; (2) asymmetric challenges as represented by state or non-state actors to include terrorists that might possess weapons of mass destruction; (3) transnational dangers such as extremism, ethnic or religious disputes, crime, and refugee flows; and (4) wild cards that could arise from unexpected world or technology events as yet undefined or by a synergistic combination of the other three threats.

To respond to these challenges, the strategy centered on concepts described by the three simple words of shape, respond, and prepare. These words and concepts were more broadly articulated for all elements of a nation’s power in the President’s May 1997 National Security Strategy and also used in the Secretary of Defense’s May 1997 Quadrennial Defense Review. In integrating advice from the President and Secretary of Defense these words took the following meaning in the military strategy: “U.S. Armed Forces advance national security by applying military power to Shape the international environment and Respond to the full spectrum of crisis, while we Prepare Now for an uncertain future.”

The 1997 NMS built on the work of the previous strategy, but was different in four main areas. First, it more specifically identified the asymmetric and wild card threats, which in hindsight could conceptually reflect the characteristics of the al Qaeda organization and the subsequent 9/11 attacks four years later. Second, it strongly made the case for why the military needed to be involved with shaping the international environment. While doing so, it clearly emphasized the warfighting aspect when it stated: “Our Armed Forces’ foremost task is to fight and win our Nation’s wars.” Third, it identified the force structure to execute the strategy in greater detail than previously, which may have been a way for the Chairman to more definitively specify needed force structure. For example, the strategy now identified the required numbers of: Army Corps, cavalry regiments and National Guard enhanced brigades; naval attack submarines and amphibious groups; and defense department civilians, Coast Guard personnel and special operations forces. Fourth, in preparing for the future, the strategy established an early foundation for the current joint force and defense transformation when it identified the characteristics for a multi-mission, joint, and interoperable force. This was clearly the greatest joint focus of any military strategy to date.

This strategy was also developed within the strategic planning process. It relied on two other 1996 strategic planning documents. The Joint Strategy Review influenced the strategy’s strategic environment assessment, and the section that covered preparing for the future leveraged the concepts identified in the 1996 Joint Vision 2010. Since the strategy came out in September, a short time after the President’s May National Security Strategy and the Secretary of Defense’s first Quadrennial Defense Review, it illustrated the interconnectivity and strong collaboration that existed among the military and civilian leadership in the National Security Council, Secretary of Defense, and Joint Chiefs of Staff. While General Shalikashvili signed this strategy in his last month as Chairman, it was fully coordinated with General Shelton, the announced incoming Chairman.
Prior to the publication of the National Military Strategy in 2004, the nation experienced a dramatic change in the strategic environment that started with the terrorist attacks of September 11, 2001, and included the strategic response of Operation ENDURING FREEDOM (Afghanistan) in October 2001 and Operation IRAQI FREEDOM (Iraq) in March 2003. In essence the military was fully engaged in the War on Terrorism in these two countries as well as in others. A defense strategy being written in concert with this military strategy placed the persistent and emerging security challenges the United States faced into four categories of traditional, irregular, catastrophic, and disruptive.32 A traditional challenge was more associated with states employing well formed militaries and systems that typified the massive state-on-state warfare characteristic of World War I and World War II. Irregular challenges reflected unconventional methods used by both state and non-state entities against a stronger state, or somewhat akin to what occurred during parts of the Vietnam War. Catastrophic challenges focused on terrorist or rogue use of weapons of mass destruction or methods producing WMD-like effects, which reflected concerns identified in the 1997 strategy. The last category was disruptive, which described competitors making a breakthrough by technological means to overcome the United State’s advantage in a particular operational domain. This last category reflected aspects of the 21st century environment that previous strategies had not considered.

This military strategy amplified these four broad defense challenges when it specified three key aspects of the environment that had unique military implications. These three aspects were under the headings: a wider range of adversaries; a more complex and distributed battlespace; and technology diffusion and access. The wider range of adversaries aspect ran the gamut from established or rogue states to non-state organizations, such as crime syndicates or terrorists networks and finally to individuals. The complex battlespace aspect included: the entire globe, whether in urban or desolated areas; defined physical space or cyber space; or in foreign states or the U.S. homeland. Emphasis on the U.S. homeland was unique to this strategy. The technology diffusion aspect reflected the global availability and easy access to civilian dual-use technologies that determined adversaries could adapt for military use. The last aspect was again very different than seen in previous military strategies.

To meet these challenges, the military strategy again built directly on defense objectives, as it defined three key supporting military objectives. These three military objectives were organized around three simple words of: protect, prevent and prevail. They were simply defined as: “protect the United States against external attacks and aggression; prevent conflict and surprise attack; and prevail against adversaries.”33

To achieve these objectives, this strategy made no reference to specific force structure as had previous military strategies. Instead, it emphasized the desired attributes, functions, and capabilities for a joint force. However, it also supported what came to be called a 1-4-2-1 force sizing construct that appeared in the defense strategy. The 1-4-2-1 construct postulated that the U.S. military needed to accomplish the following: defend the homeland (1), deter forward in and from four regions (4); conduct two overlapping defeat campaigns (2); and win decisively in one campaign (1).34 Overall, this force structure approach provided great flexibility for future force structure changes in concert with a capability- vice threat-based approach, and it clearly had the greatest joint focus to date of any military strategy.

The process to produce this strategy was very different from the other three strategies in many ways. A draft of the strategy was produced in 2002 to integrate the advice of the post 9/11 2001 Defense Quadrennial Review and the 2002 National Security Strategy. However there was some question
whether an unclassified National Military Strategy was needed. For example, a defense strategy was published as part of the QDR, the Chairman provided military specific advice by the 2002 classified National Military Strategic Plan for the War on Terrorism, and he provided unclassified operational military advice in 2003 through the Joint Operations Concepts. However, Congress cleared up any ambiguity that existed when it passed the 2004 National Defense Authorization Act. This Act required the Chairman to produce a detailed report that is a biennial review of the National Military Strategy in eight specific areas to include the strategic and military risks inherent in the strategy. This amendment to existing U.S. Code involving the Chairman’s responsibilities is an example of Congress performing its oversight role. If Congress is not satisfied with the information it receives, it will pass legislation that is then more specific on “what” the Chairman needs to provide.

The actual writing of the 2004 military strategy followed a very integrated and parallel path as the Vice Director of Strategy, Plans and Policy on the Joint Staff stated: “So we’ve worked hand in glove with the Secretary of Defense’s staff in developing both of these documents.” The Defense Staff focused on writing a national defense strategy, the first time this was done as a separate unclassified document, and the Joint Staff focused on writing a national military strategy. As such, one sees the military strategy directly referencing a national defense strategy in many of its sections, which reflects this close collaboration to ensure synchronization and alignment. While the military strategy was completed in 2004 and copies could be located on the internet, it was officially released at a March 18, 2005, press conference when the Under Secretary Defense for Policy and Joint Staff Vice Director of Strategy, Plans and Policy discussed the National Defense Strategy and National Military Strategy together.

CONCLUSION

The National Military Strategy is the keystone document of an overarching strategic planning system that enabled the Chairman as the nation’s senior military advisor to execute his formal leadership responsibilities specified by Congress in Title 10 U.S. Code. Since 1990, each of these four strategies identified the broad military ends, ways, and means that were needed to meet the nation’s security challenges identified by the President in his National Security Strategy and integrated advice by the Secretary of Defense from other documents, which now include a National Defense Strategy. The unclassified nature of the military strategy and its completion by the Chairman to integrate this civilian advice was a leadership legacy started by Chairman Powell that continues today. Most importantly, this strategy directly communicates to Congress and the American people the need for a military, what that military will do, and how it will do it to provide for our nation’s security. It essentially creates a compact between the military and the American people that is so important in today’s volatile, uncertain, complex and ambiguous global security environment.

ENDNOTES - CHAPTER 6

3. The challenge discussion is the author’s assessment from reading the four national military strategies and attending Service Chiefs’ lectures while teaching at the Army War College. Reserve forces have changed from a strategic reserve to an operational reserve with its increased use. There were slight increase in active duty ground personnel started in
2005-07 timeframe as Army and Marine Corps strength ceilings were temporarily and then permanently increased but their total did not approach the early 1990s.

CHAPTER 7
SECURING AMERICA FROM ATTACK:
THE DEFENSE DEPARTMENT’S EVOLVING ROLE AFTER 9/11

Frank L. Jones

At 8:46 a.m. on September 11, 2001, a clear, sunny day on the East Coast, an American Airlines plane loaded with passengers, crew and thousands of gallons of fuel slammed into the 110-story north tower of World Trade Center in downtown Manhattan, exploding in a massive inferno. Seventeen minutes later, a second airplane, this time a United Airlines flight, crashed into the Center’s twin south tower, igniting another firestorm. President George W. Bush, traveling in Florida, was informed of the incidents and immediately departed for the capital. Before leaving, he made a brief statement at 9:30 a.m. confirming that the planes were part of “an apparent terrorist attack” on the United States. Less than 10 minutes after he spoke, a third airliner crashed into the U.S. Department of Defense (DoD) headquarters, more commonly known as the Pentagon, setting off an enormous fire causing hundreds of casualties; jet fuel literally ran down the corridors. The events did not end there. Shortly after 10:00 a.m., a fourth airliner plummeted to earth in a field just outside rural Shanksville, Pennsylvania, before it could reach its intended target, the result of a heroic effort by the passengers to prevent another horrific act from occurring.¹

In a matter of less than 2 hours, both the World Trade Center’s towers had collapsed, an unimaginable event, and nearly 3,000 people were killed. Manhattan was a storm of dust, ash, and debris. After the Pentagon attack, the Federal Aviation Administration, for the first time in U.S. history, shut down the nation’s airspace, ordering all airborne planes to land immediately at the nearest airport. In their place, U.S. fighter jets streaked into the sky above the nation, their pilots ordered to shoot down any aircraft that did not comply. The horrific events of the morning now surpassed the nation’s most famous day of infamy: the Japanese attack on Pearl Harbor 60 years earlier.²

The terrorist attacks were stunning not only in the tragedy they produced, but also as demonstrations of the creative lengths to which enemies of the United States could go to use everyday technology as weapons of mass destruction (WMD) against us. The capacity to wreck havoc of this magnitude was not unexpected for the signs of such an attempt had been foretold through a series of earlier events, both at home and overseas, including the 1993 World Trade Center bombing and an attack on the U.S. Navy destroyer Cole in Yemen in which dozens of crew members were killed or injured. What was startling to many Americans was the inability of the U.S. Government agencies to discern and prevent such a clever use of civilian aircraft. It was, as one of the commissions established to investigate the incident ominously warned, “a failure of imagination” on the part of the government.³ These words also signaled that protecting the United States from further attack would be neither simple nor immediate despite the best intentions of U.S. Government leaders.

Years before the catastrophic events of September 11, 2001, various commissions established by the U.S. Congress urged the President and other officials to place substantial emphasis on improving the security of the United States against terrorist attack through increased resources, organizational redesign, and enhanced coordination among federal, state, and local governments.⁴ Unfortunately, September 11, 2001 would not only represent a distressing event in American history, it would take this tragedy to catalyze the governments and the private sector in the United States to undertake such a massive concerted effort to prevent such an attack from recurring. However, there was always
the nagging realization that such an event could happen again, and if so, then the public and private sector needed to be prepared to respond to the consequences. Such an expectation had been noted decades before when President Calvin Coolidge gave voice to those fears in an address delivered before the American Legion convention in Omaha, Nebraska, on October 6, 1925. “In spite of all the arguments in favor of great military forces, no nation ever had an army large enough to guarantee it against attack in time of peace or to ensure victory in time of war.” Nonetheless, as the preamble to the U.S. Constitution underscores, it is the duty of the U.S. Government to “insure the domestic tranquility” and “provide for the common defense.” Mindful of this obligation, U.S. Government leaders initiated a number of actions to respond to this exceedingly complex mission.

The attacks on the United States forced President George W. Bush and other administration officials to concentrate intently on the possibility of threats to the U.S. homeland. For DoD officials, there was recognition that the country had become, to use military parlance, a “battlespace.” There was an immediate refocusing from programs spending millions of dollars to develop a high-tech missile shield to prevent a ballistic missile attack by another state to fundamental concerns about a growing non-state threat. Thus, DoD would be given domestic duties to fight terrorism at home because as then Deputy Secretary of Defense Paul Wolfowitz explained, “The government is just not organized to deal with catastrophes on that scale, and when we do have catastrophes on that scale we inevitably end up turning to the military.” There were skeptics nonetheless who contended that the military would embrace this mission as it would justify force structure and increase the defense budget, while Republican politicians would view it as an ironclad rationale for promoting national missile defense as a component of overall homeland defense. More reflective thinkers recognized that defending the U.S. homeland against terrorism required a new paradigm—a new structure for meeting a more ambiguous challenge. The Pentagon no longer had to sell the idea of homeland defense politically. The issue now was how to make it work.

The first response to this challenge was conventional with the president ordering a retaliatory strike on Afghanistan, which was harboring the Al-Qaeda terrorist leaders who had planned the suicide attack on Manhattan and Washington, and where this terrorist group had training camps. Nonetheless, there was no major overhaul of U.S. military forces nor was there a significant reallocation of funds to homeland defense missions, which had not even been defined. The 2001 Quadrennial Defense Review (QDR), presented to Congress in early October, largely upheld traditional thinking although it claimed that homeland defense was the Pentagon’s highest priority. This document continued to stress U.S. advantages in space, information and power projection as well as the future of its nuclear arsenal. The underlying warfighting concept remained focused on combat with nation-states, emphasizing regime change in one war and repelling an aggressor in another. One critic said the thinking remains “full speed ahead with the status quo,” while Andrew Krepinevich, the executive director of the Center of Strategic and Budgetary Assessments, a Washington, DC think tank, complained that the QDR was a “thematic” document that called for transformation but provided no specifics on how this is to be accomplished. He was perplexed as to the Secretary of Defense’s public statements that while the priority is on homeland defense, intelligence and other features for the changed strategic environment, new fighter jet programs remained the major acquisition programs. Krepinevich’s observation was astute. Although Rumsfeld heralded an ambitious program for transforming the military, the changes were marginal. The Department had already begun to deflect any serious responsibility for this new mission by declaring in the QDR that the September 11 attacks made clear that “the Department of Defense does not and cannot have the sole responsibility for homeland security.” The only concession mentioned expressly was to consider establishing a new combatant commander for homeland defense. In the White House, other actions were occurring at a more rapid pace. The President signed Executive Order 13228 on
October 8, 2001, that established the post of Assistant to the President for Homeland Security in the Executive Office of the President as well as a Homeland Security Council, modeled on the National Security Council, which had existed since 1947.

The creation of this post and the council required Secretary of Defense Rumsfeld to name Secretary of the Army, Thomas E. White as DoD’s first homeland security coordinator with responsibility for representing the department in council deliberations as well as interacting with the new homeland security advisor, a former Pennsylvania governor and member of the U.S. House of Representatives, Thomas J. Ridge. Pundits suggested that by naming White to the coordinator mission, the Army would have a pivotal role in whatever responsibility is given to the military for homeland defense. White added to that perception by stating: “Since the early days of our nation, the Army, both active and reserve, has engaged in homeland security. The Army brings enormous experience, talent and capabilities to this effort.”11 The rhetoric was comforting to a nation still reeling from the attacks, but the exact role that White would have remained unclear. Nonetheless, Rumsfeld soon delivered on his promise to examine whether a separate combatant command should be established for the purpose of securing the U.S. homeland.

By mid-October 2001, a review of the Unified Command Plan was in progress. Rumsfeld was convinced that the current manner in which the armed forces were organized along regional lines was inappropriate to execute a global campaign against terrorism. There was considerable concern that transnational threats such as weapons proliferation and terrorism had not received sufficient attention from senior commanders and that the capability to coordinate with law enforcement concerning these threats from region to region was nonexistent. To fasten the military’s attention on homeland defense there was also extensive discussion about the creation of an Americas Command that would be responsible for the Western Hemisphere. In addition to this effort, the Pentagon leadership released the defense planning guidance for the war on terrorism that consisted of three goals: assail state support for terrorism, weaken its non-state support, and defend the U.S. homeland from additional terrorist attacks. Pentagon officials recognized that the current Unified Command Plan addressed the first two aims but not the third.12

By the end of 2001, Ridge and his staff were largely in place, but there were continued concerns by lawmakers and anti-terrorism experts that Congress needed to create a permanent homeland security post with a large staff and consolidate government agencies as part of it. The White House disagreed, arguing that Ridge could accomplish more as an adviser with the president’s mandate and a staff detailed from other U.S. agencies than as head of a separate bureaucracy. DoD cautiously adopted its new homeland defense mission. By late January 2002, Defense officials sought to pull National Guard troops from security duties at the nation’s airports, turning that responsibility over to the new Transportation Security Administration, which Congress established by law a month earlier. Approximately 6,000 troops were on duty at 400 airports across the United States to deter terrorists and reassure the public about the safety of air travel. The disengagement of the National Guard as a security force bespoke DoD’s view that other federal agencies as well as state and local governments should handle the majority of the nation’s homeland security duties. Ridge shared this view and declared that federal funding would be made available for this purpose. Secretary White endorsed Ridge’s priorities, stating publicly that the military should have a limited role in guarding the borders and policing airports and other potential terrorist targets in the United States. Instead, it should concentrate on Afghanistan and other areas of the world. Additionally, National Guard troops assisting in border security in some states should be relieved of this duty also. Meanwhile, the Department of Defense was considering scaling back the air patrols the Air Force had been conducting over major U.S. cities and critical infrastructure locations since September 11.13

White’s remarks and the slow pace at which bureaucratic reorganization was occurring suggested to one observer, former U.S. ambassador and retired U.S. Army lieutenant general Edward Rowny,
that there was a lack of urgency on the part of the Bush White House. Rumsfeld, however, in early February announced a proposal to establish a new regional command, Northern Command, to deal with the military component of homeland security. Rowny applauded Rumsfeld’s initiative but contended that more needed to be done. He recommended that the Bush administration push for a similar consolidation and reorganization of the intelligence, border security, and emergency response agencies of the federal government. He also criticized Ridge’s organization as ineffective because it lacked the needed tools and resources to handle a large-scale terrorist attack. Ridge, in Rowny’s opinion, also had insufficient authority: he could not order federal agencies to act. Rowny’s viewpoint was not a solitary one. Even the Bush administration recognized this deficiency, and in a speech at the National Press Club in Washington, DC, Ridge remarked that the President was considering reorganizing some federal departments and agencies, which would require congressional authorization.14

Meanwhile, Rumsfeld, sensing the mood of the country and particularly the Congress, announced in April 2002, a military reorganization designed to give higher priority to homeland defense against terrorist attacks by the establishment of Northern Command. The new command, with headquarters in Colorado Springs, Colorado, and commanded by an Air Force general, was tasked to oversee the defense of U.S. territory except for Hawaii and the U.S. possessions in the Pacific Ocean. Responsibility for these areas would belong to the existing U.S. Pacific Command. Northern Command would not only be responsible for the homeland defense mission, but would also coordinate with other federal agencies in preparing and responding to the consequences of a terrorist attack as well as natural and manmade disasters. Canada and Mexico would be included as part of the command’s regional responsibilities.

Rumsfeld’s decision had its critics, particularly civil libertarians who were concerned about the use of the U.S. military for domestic security, particularly the erosion of constraints placed on the military by the Posse Comitatus Act, a federal law enacted after the Reconstruction in 1878, that prohibits the regular military from performing domestic law enforcement functions. Other critics expressed concern that the use of the military for domestic security and response diverted limited resources and weakened the military’s effectiveness to fight wars overseas.15 Almost simultaneously with the creation of the command, the Bush administration proposed the creation of a new executive branch department, the Department of Homeland Security (DHS).

Rumsfeld remained determined, however, to limit the scope of DoD’s homeland defense mission. On May 7, 2002, testifying before the Senate Appropriations Committee, he continued to stress the importance of forward deterrence, that is, the prosecution of the war on terrorism abroad. Eventually, he turned to the subject of homeland defense and in doing so, articulated clearly and for the first time, the circumstances under which DoD would be involved in operations in the United States. First, there were extraordinary circumstances that required DoD to execute its traditional military missions and therefore, DoD would take the lead with support from other federal agencies. Examples of these missions were combat air patrols and maritime defense operations. Also included in this category are cases in which the president, exercising his constitutional authority as commander-in-chief and chief executive, authorizes military action. This inherent authority, Rumsfeld pointed out, may only be used in instances such as terrorist attacks, where normal measures were insufficient to execute federal functions. The second category was more traditional: in emergency circumstances of a catastrophic nature. Rumsfeld offered the example of responding to an attack or assisting other federal agencies with natural disasters. In these cases, the department would be providing capabilities that other agencies did not possess. The third category he described as missions limited in scope, where other agencies have the lead from the outset, giving the example of security at a special event such as the Olympics.16
Rumsfeld stressed that of the three categories, the first one was homeland defense since the department was carrying out its primary mission of defending the people and territory of the United States. The other two categories were homeland security whereby other federal agencies have the lead and DoD lent support. He continued by justifying the need for a $14 billion supplemental funding request for fiscal year 2002, and an increase in fiscal year 2003 funding of $48 billion. He added that both were essential for the war on terrorism but made no claim that any of the funding would be used for homeland defense. This was understandable given his limited definition of the department’s role.17

He also announced that the president had approved a major revision of the Unified Command Plan and that one feature was the establishment of a combatant command for homeland defense, U.S. Northern Command at Peterson Air Force Base, Colorado. The primary missions of the new command were defending the United States against external threats, coordinating military support to civil authorities as well as responsibility for security cooperation with Canada and Mexico.18

He followed this announcement with another, stating that he had established his own interim Office of Homeland Defense, and his intention to establish, by summer, a permanent office in the Office of the Secretary of Defense. The office would ensure internal coordination of DoD policy, provide guidance to Northern Command regarding homeland defense and support of civil authorities, and coordinate with the White House’s Office of Homeland Security and other government agencies.19

Lastly, he assured the committee members that the department was conducting the study on the DoD role in homeland defense directed by the 2002 National Defense Authorization Act. Specifically, the comprehensive plan on how best to structure the Office of the Secretary of Defense to combat terrorism, defend the homeland, and enhance intelligence capabilities was expected to be completed during the summer.20 The plan was completed as promised.

Acting on the recommendations in that plan, in July 2002, Rumsfeld decided to reorganize the Office of the Secretary of Defense by adding the position of Assistant Secretary of Defense for Homeland Defense based on the plan required by Congress. He selected Paul McHale, a former Democratic member of Congress from Pennsylvania, as the first to hold this position, pending Senate confirmation. One of the new assistant secretary’s responsibilities would be to serve as a liaison between the Department of Defense and the proposed new homeland security department.21

Weeks later, Rumsfeld found himself, along with the Secretaries of State and Treasury, and the Attorney General, in the midst of the Bush Administration’s controversial plan to establish a new homeland security department using all or parts of twenty-two existing agencies, a proposal that the President laid out in June. Rumsfeld and the other cabinet officials testified in support of the President’s plan before the House Select Committee on Homeland Security. The plan faced substantial opposition because the 12 committees in the House of Representatives that oversaw these agencies wanted to preserve their oversight responsibilities. Some standing committees of the House had already voted against provisions of the proposed legislation to create the department. The presence of the four cabinet heads before the select committee underscored not only the seriousness of the issue, but also the interdepartmental nature of the homeland security function and the domestic and international dimensions of the mission, ranging from border patrol and law enforcement to immigration and the issuance of visas.22 As Attorney General John Ashcroft noted, “America’s security requires a new approach, one nurtured by cooperation, collaboration, and coordination, not compartmentalization, one focused on a single, overarching goal—the prevention of terrorist attacks.”23

The emphasis on homeland defense remained more rhetoric than reality in DoD at least in terms of funds, procurement programs, and force structure changes. The Defense Planning Guidance, a document providing budgeting and planning guidance to DoD components, that Secretary
Rumsfeld issued in May 2002, placed greater emphasis on the new strategic concept, “forward deterrence,” that is, a commitment to attacking potential threats overseas. While the projection of U.S. forces over long distances to fight new adversaries made sense, the Defense Planning Guidance paid no attention to the support missions that the Department of Defense might have to provide federal, state, and local responders should a WMD, such as a nuclear, chemical, radiological, or biological device, be detonated in the United States. Instead, the emphasis was primarily on a global strike capability with added emphasis on overseas intelligence collection, covert special operations, unmanned air vehicles, cyber-warfare, hypersonic missiles, and the capacity to prevent an adversary from disrupting U.S. communications and intelligence assets in space and to strike underground targets. This was a position Rumsfeld articulated publicly in a Foreign Affairs article that appeared that spring.

This narrow perspective was expected to change because of two events. The first was that Northern Command became initially operational as an organization on October 1, 2002. The second event promised equally dramatic change, based on a provision in the 2003 Defense Authorization Act, which Congress passed in October 2002. The act authorized the establishment of the position of the Assistant Secretary of Defense for Homeland Defense. Four months later, in February 2003, Paul McHale was confirmed as the first person to hold this position. Additionally, Congress established the new Department of Homeland Security by the Homeland Security Act of 2002, enacted in November. Its first secretary would be Tom Ridge. The only major provision of the law that affected DoD was that the Homeland Security Council was established statutorily, consisting of the President, Vice President, Attorney General, the Secretary of Defense and the newly created Secretary of Homeland Security.

In February 2003, the new department and the two new DoD organizations would faced the first test of their abilities to respond to a domestic event and coordinate with other U.S. Government organizations when the space shuttle Columbia broke up over Texas during reentry to earth. Within an hour after the disaster, Ridge conferred with intelligence and White House officials as well as Northern Command, and determined that the incident had not resulted from terrorism. Ridge put the Federal Emergency Management Agency (FEMA), now part of DHS, in charge of recovering debris from the shuttle, while Secretary Rumsfeld assigned Northern Command to assist with this effort; a variety of aircraft and ships responded.

This experience also helped prompt a new presidential directive, Homeland Security Presidential Directive-5, Management of Domestic Incidents, in which DoD would ultimately have a substantial role in implementation. In this document, the President designated the Secretary of Homeland Security as the principal federal officer for domestic incident management. The Secretary of Defense was tasked to provide military support to civil authorities for domestic incidents under the president’s direction or when consistent with military readiness, the appropriate circumstances, and law. The directive indicated that even during these events, military forces would remain under the command and control of the Secretary of Defense. The Secretary of Defense and the Secretary of Homeland Security were to develop mechanisms to promote cooperation and coordination between the two departments. Lastly, the directive called for the formulation of a National Response Plan (NRP) that would integrate the federal government’s domestic prevention, preparedness, response, and recovery plans into a single all-hazards plan. An initial version of the NRP was due to the Assistant to the President for Homeland Security by April 1, 2003, along with a recommendation for the time needed to develop and implement a final version of this plan.

By the beginning of April 2003, with U.S. military forces having invaded Iraq a month earlier, and now within 50 miles of Baghdad, Rumsfeld’s view about homeland defense was apparent: the best way to secure the United States was to pursue terrorists in their havens. Meanwhile, Paul McHale
was busily putting his office in place with all the attendant bureaucratic headaches associated with such a venture. He also had his first appearance before Congress in April, when he testified before the Senate Armed Services Committee regarding defense of the U.S. homeland. McHale reiterated Rumsfeld’s three conditions under which the Department of Defense would be involved in activities within the United States. However, these conditions were already being eroded. As McHale indicated, since September 11, 2001, DoD had flown more than 28,000 sorties over U.S. cities and responded to more than 1,000 requests from the Federal Aviation Administration to intercept potential air threats. Air patrols over the U.S. domestic airspace were no longer extraordinary but routine.29

During the summer of 2003, McHale’s office would devote substantial time to a major department-wide, Secretary of Defense-directed classified study of the homeland defense mission and the force structure required to execute that mission. Later that year, the office would shape the next Strategic Planning Guidance, which required his office to formulate with assistance from other DoD components a homeland defense strategy within a year.

On December 17, 2003, President Bush approved two new homeland security directives that affected DoD. The first document, Homeland Security Presidential Directive-7, Critical Infrastructure Identification, Prioritization and Protection, established national policy for federal departments and agencies to identify and prioritize U.S. critical infrastructure and key resources and to protect them from attack. The directive recognized that there were several critical infrastructure sectors, each with its own characteristics and operating processes. Although the DHS would have principal responsibility for implementing this directive, specific departments were designated responsible for collaborating with business and industry, conducting or facilitating vulnerability assessments, and encouraging risk management activities to protect against terrorist attacks or mitigate their effects. The Department of Defense assumed responsibility for the defense industrial base, thereby gaining another homeland security mission.30

The President also issued Homeland Security Presidential Directive-8, National Preparedness that established policies to bolster the preparedness of the United States to prevent or respond to threatened or actual terrorist attacks, major disasters, and other emergencies. This measure called for the establishment of a national all-hazards preparedness goal, mechanisms for improving the delivery of federal preparedness assistance to state and local governments, and defining actions to improve preparedness at all levels of government. The Department of Defense’s role, though not as major as other federal departments and agencies, was to provide the DHS with information concerning organizations and functions that could be utilized to support civil authorities during a domestic crisis.31

Despite the attention to these strategic issues, the tyranny of daily operational demands was also present. During the Christmas holiday season, intelligence indicators stressed that al Qaeda’s intent to carry out multiple catastrophic attacks in the United States was greater than at any point since September 11. The indicators suggested that the terrorist group was testing the vulnerabilities of the air transportation system, both passenger and cargo. In response, Secretary Ridge announced an upgrade in the threat level from elevated risk to high risk or orange alert, the second highest level in the color-coded system, after President Bush approved the recommendation by Ridge along with senior officials of the Federal Bureau of Investigation, the Central Intelligence Agency, DoD, the Justice Department, and White House staff. Raising the threat level increased security measures across the country to protect government buildings, critical infrastructure, shopping malls and other places where large numbers of people congregate. This decision was not made lightly. A few months earlier, in response to al Qaeda suicide bombings in Saudi Arabia and Morocco, and after several orange alerts within a few months, Ridge and Rumsfeld opposed raising alert levels. Ridge
argued that frequent changes only caused considerable psychological unease in Americans as well as making the public cynical. Rumsfeld stated that raising the alert diverted military resources from Iraq and Afghanistan. The holiday season ended uneventfully, but operational concerns continued to intrude because of the need to refine security procedures.

Slowly and subtly, the three conditions for DoD involved in domestic activities that Rumsfeld articulated 2 years earlier were jettisoned. In March 2004, McHale appeared before the Senate Armed Services Committee to update the members on DoD’s ongoing homeland defense initiatives. At that time he did not mention the three conditions. Instead, McHale laid out a concept of layered defense, which he called the lines of defense. The first line of defense was combating terrorism far from U.S. territory. The second line of defense was the air and maritime approaches to the United States and interdicting terrorists before they reached U.S. borders, which was largely the responsibility of two combatant commands—Northern Command and Pacific Command. Within the United States, the domestic law enforcement community was responsible for countering terrorist attacks, in a sense a third line of defense, with DoD ready to provide its capabilities to civil authorities, consistent with U.S. law. However, McHale also stated that DoD had established and maintained a small number of reaction forces in the United States. These forces consisted of U.S. Army and Marine Corps personnel who were postured to respond to a full range of threats if ordered by the president, and when deployed, under NORTHCOM’s command and control.

Additionally, throughout 2004, as had been the case in 2003, DoD actively continued to enhance its homeland defense and civil support missions. It maintained the readiness of its own forces by hosting exercises and participating in those sponsored by other government entities. Further, it was implementing its responsibilities under HSPD-7 regarding critical infrastructure by consolidating funding for this effort under a single program and managing it by a program office. It also undertook a number of supporting missions including establishing a DoD presence in the DHS’s Operations Center, detailing personnel to DHS to fill critical specialties primarily in intelligence analysis and communication, creating various liaison mechanisms, and identifying and transferring technology items and equipment that DoD had or was developing that might be of assistance to federal, state and local governments in their homeland security roles. Simultaneously, the department was responding to requests for assistance from several civilian agencies—for example, providing emergency support in natural disasters such as Hurricane Isabel and California wildfires. It also responded to the ricin incident on Capitol Hill in January 2005. That incident saw the first operational use of NORTHCOM’s Joint Force Headquarters-National Capital Region, which provided the command and control of the U.S. Marine Corps Chemical-Biological Response Force’s assistance to the U.S. Capitol Police.

DoD support to the interagency was broadened in August 2004, when President Bush established by executive order, the National Counterterrorism Center under the direction and control of the Director of Central Intelligence. The primary function of the center was to serve as the hub for analyzing and integrating all intelligence pertaining to terrorism, except purely domestic intelligence information. Additionally, it was to conduct strategic operational planning for counterterrorism activities by integrating all the national instruments of power. To that end, DoD, as well as other partner organizations, provided personnel to assist the center with its mission.

DoD also assumed a major role in the development of the National Response Plan (NRP) required by HSPD-5. The development of the initial NRP met with resistance from state, local and tribal governments as well as non-governmental organizations, since they were not consulted by DHS during its formulation. Consequently, DHS and a small group of its federal partners, including DoD personnel, began anew—mindful of outreach to other stakeholders—in an intense writing process of monumental proportions that addressed planning assumptions and considerations, roles
and responsibilities of the variety of organizations involved in responding to an emergency, and a concept of operations. The NRP identified fourteen emergency support functions, of which DoD (U.S. Army Corps of Engineers) would have the lead for public works and engineering, but would be a supporting agency in the remaining 13. The document also included special support annexes dealing with myriad topics such as tribal relations and private sector coordination and incident annexes for specifically troublesome situations such as a terrorism event involving a biological agent or hazardous materials pollution.36

The document, consisting of more than 300 pages, was approved in December 2004 by Secretary Ridge along with 27 federal departments and agencies, the U.S. Postal Service, the American Red Cross, the Corporation for National and Community Service, and the National Voluntary Organizations Active in Disaster.

Within days of the NRP’s approval, President Bush issued a combined National and Homeland security directive on maritime security, an initiative of his new homeland security adviser, Frances Fragos Townsend. This directive not only established U.S. policy regarding protection of the nation’s maritime interests, but directed the development of a national strategy for maritime security and eight national plans addressing such critical subjects as the U.S. Government’s capability to respond to a maritime threat, the nation’s capacity to recover from an attack or disaster affecting the maritime infrastructure, and security of both the maritime transportation system and the related supply chain. The President tasked DoD and DHS to lead an interagency task force to formulate the national strategy for maritime security for his approval within six months. The eight plans were to be delivered nearly simultaneously.37 This approach was fraught with problems since the plans relied on the guidance framed in the strategy as well as coordination with various state and local governments, transportation and port authorities, and maritime industry trade associations.

It turned out that maritime security was not the only domain that required additional attention. In May 2005, a privately owned Cessna 150 airplane inadvertently penetrated the 16-mile-radius no fly zone around Washington, DC, established after the events of September 11, and designed to prevent air attacks on the White House and the Capitol. Federal Aviation Administration and DHS officials could not communicate with the pilot, so Secretary Rumsfeld gave military officials the authority to shoot the plane down, if necessary. Aircraft from DHS Customs and Border Protection and military fighters moved to intercept the plane, and after eleven tense minutes, the pilot heeded instructions to turn away from the city. The incident required Defense Department and civilian officials to review the effectiveness of the air defense system for the nation’s capital. Once again, DoD and its civilian counterparts were confronting sensitive issues involving internal governmental decision-making, communications, and federal interagency relations as well as authorities.38 With respect to the latter, the DHS, under the new leadership of Secretary Michael Chertoff, a former federal judge, argued that his agency should have the shoot down authority. President Bush rejected this request. Nonetheless, the incident led to increased congressional scrutiny of the procedures and agency responsiveness. The event was also a warning signal that although air transportation security had been upgraded, the focus had been limited to scrutiny of passengers and cargo security. However, the Homeland Security Council staff contended that this issue would have to be deferred since other areas such as domestic nuclear attention had priority.

A month earlier, President Bush issued another combined NSPD/HSPD, designed to enhance protection against an attack in the United States using a nuclear or radiological device, and to advance the technology and integration of detection capabilities among across federal, state, local and tribal governments. To achieve these policy goals, the chief executive directed the Secretary of Homeland Security to create a national level Domestic Nuclear Detection Office within DHS. The Secretaries of State, Defense, and Energy as well as the Attorney General were ordered to assign
personnel to staff this new organization and to lend expertise to strengthen the development and deployment of a detection system, coordinate the detection effort with the other government entities in the United States, and develop a global nuclear detection architecture consisting of domestic and international portions. The Departments of Defense, State, and Energy would design and implement the international segment.³⁹

June 2005 marked a critical milestone in reshaping DoD’s approach to its homeland defense and support to civil authorities’ missions through the development and approval of DoD’s Strategy for Homeland Defense and Civil Support. Although Secretary Rumsfeld directed the formulation of the strategy in the Strategic Planning Guidance of March 2004, internal delays and bureaucratic resistance associated with organizational change hampered progress. Nonetheless, these impediments were ultimately overcome, and the strategy represented the Department’s vision for transforming homeland defense and civil support capabilities.

The strategy specifically concentrated on DoD’s paramount goal: securing the United States from direct attack. Recognizing the sensitivity associated with the role of the military in domestic affairs, the strategy made clear that it was rooted in a respect for America’s constitutional principles. The strategy also sought to capitalize on Secretary Rumsfeld’s commitment to transformation of U.S. military capabilities. Thus, it examined a ten-year period and gave equal recognition of terrorist and state-based threats to the United States.⁴⁰

The strategy’s foundation was the concept of an active, layered defense outlined in the National Defense Strategy. Specifically, this active, layered defense is understood to be global, seamlessly integrating U.S. capabilities in the foreign regions of the world, the global commons of space and cyberspace, in the geographic approaches to U.S. territory, and within the United States. In short, it is defense in depth predicated on viewing the strategic environment as an open system in which people, trade, and information move continuously and for which the entire U.S. Government contributes to its defense through a variety of capabilities in a synchronized manner. For an active, layered defense to be effective, it “requires superior intelligence collection, fusion, and analysis, calculated deterrence of enemies, a layered system of mutually supporting defensive measures that are neither ad hoc nor passive, and the capability to mass and focus sufficient warfighting assets to defeat any attack.”⁴¹

Although the concept of an active, layered defense had a global context, the strategy focused primarily on the U.S. homeland and the approaches to U.S. territory. The Defense Department recognized its responsibility for a number of activities in these geographic layers, but as an organizing construct, there were three principal categories: “Lead, Support and Enable.” “Lead” meant that DoD, at the direction of the President or the Secretary of Defense, executed military missions to dissuade, deter, or defeat attacks on the United States. “Support” considered DoD’s traditional role of providing support to civil authorities at the direction of the President or Secretary of Defense. This support was to be part of a comprehensive national response to prevent or protect against terrorist incidents or to recover from an attack or disaster. Finally, “Enable” sought to enhance the homeland security and homeland defense capabilities of domestic and international partners and, in turn, improve DoD capabilities by sharing technology and expertise across military and civilian boundaries. The strategy also addressed key objectives of this three pronged framework as well as specific operational capabilities that were needed to achieve these objectives and the strategic risks of not doing so.⁴² In addressing capabilities the authors of the strategy sought to influence other departmental processes, namely, funding, force structure, and technology development, in order to implement the strategic tenets of the document. The next opportunity to have an influence on these processes would be the QDR. However, before that review occurred, an incident of national significance⁴³ would also have an effect.
On August 29, 2005, the most destructive hurricane in U.S. history, Katrina, hammered the Gulf of Mexico, killing more than a thousand people and causing substantial devastation to the states of Louisiana, Mississippi, and Alabama. New Orleans bore the brunt of the damaging effects when the powerful storm breached the levee system and flooded eighty percent of the city.44 Public order disintegrated because of inadequate planning by municipal and state officials and a lack of foresight regarding potential scenarios when a category 5 hurricane hits. The federal response proved unequal to the task as well, and poor communication and coordination between federal and state authorities only exacerbated the deficient response effort. FEMA was overwhelmed by the magnitude of the destruction and the requests for assistance. It soon became apparent that even with the support of other civilian agencies, DoD and National Guard units from across the country would need to be deployed.45

Ultimately, more than 72,000 active duty military and National Guard personnel deployed to provide assistance to ravaged areas between August 29 and September 10. The figure was twice the record deployment of military assets in response to a natural disaster since Hurricane Andrew in 1992. The department acted on more than 90 requests for assistance from civil authorities, many of which were approved orally by the Secretary of Defense, including one that had an estimated value of one billion dollars. There were deficiencies in the Department’s response such as lack of pre-planned response capabilities for possible disaster scenarios, the need for closer coordination between DHS and Northern Command, and the requirement for more accurate and rapid initial damage reconnaissance and assessment. Nonetheless, the DoD evaluation was that U.S. military forces were ready and capable to execute the largest, most comprehensive, and most responsive civil support mission ever.46

Overall, the media, the American public and federal authorities rated DoD’s response a success. When departmental advocates pointed out, however, that an even more robust DoD response might be required in the event of a catastrophic terrorist event where the loss of life and destruction of property would exceed Katrina’s devastation, the argument was dismissed because of the department’s successful response.47 The DoD leadership overseeing the ongoing QDR, which examined U.S. defense strategy in late 2005 and resulted in a report to Congress in February 2006, paid scant attention to homeland defense and civil support issues. In short, the touting of DoD’s rapid and dependable response before congressional committees and in the media made these issues victims of their own success.

Publication of the QDR report is certainly not the end of DoD’s involvement in homeland defense or support to civil authorities. While publication of the DoD Strategy for Homeland Defense and Civil Support represents the zenith of attention to these missions, the QDR review represented a plateau. The QDR report itself signaled that the Department’s leadership felt confident that in the more than four years since the tragic events of September 11, 2001, DoD had made substantial progress in improving its capability to protect the U.S. homeland from attack and to respond effectively to a catastrophic event. The latter was a capability that required further attention, as the QDR report noted, but it was not the priority. Iraq and Afghanistan were consuming the leaders’ attention and the Department’s resources. As the QDR report noted, DoD believed that the civilian agencies that had these missions as their primary responsibility needed to attend to them. It was a position with which the Secretary of Homeland Security and the Congress agreed. The former stated that an enhanced FEMA was needed, and the Congress obliged him by passing the FEMA Reorganization Act in 2006. For many, DoD had amply proved its ability to fulfill its three roles specified in its own strategy: lead, support and enable. For its part, the Department was confident in its strategy and its ability to accomplish the homeland defense mission.

43. U.S. Department of Homeland Security, *National Response Plan*, December 2004, p. 3. “Incidents of National Significance are those high-impact events that require a coordinated and effective response by an appropriate combination of Federal, State, local, tribal, private-sector, and nongovernmental entities in order to save lives, minimize damage, and provide the basis for long-term community recovery and mitigation activities.”

CHAPTER 8

THE APPROPRIATE ROLE OF INTELLIGENCE
IN THE MAKING OF NATIONAL SECURITY POLICY

Anthony R. Williams

The purpose of intelligence analysis is to elevate the quality of discussion in this town.

Sherman Kent

What is the appropriate role of intelligence in the making of national security policy? Most members of the national security community bring to their roles a preconceived and mostly subconscious view on this issue, which view seems so obvious to its holders, that they rarely see reason to raise the question. Even within the U.S. Intelligence Community, where the subject is more frequently discussed, it is usually approached as part of an academic discussion, and only rarely as part of the planning and execution of normal support to the national security policy process. In effect, all the players in the process hold opinions on this issue, but those opinions function in the background, much as the operating software for a personal computer runs invisible to the user unless it malfunctions.

Generally speaking, members of the national security community will fall loosely into one of two groups as regards their attitude toward the appropriate role of intelligence in the policy process. These can best be described as the “unconstrained support to policy” view and the “policy neutral” view. While few will hold either attitude without qualification, it is instructive to imagine these attitudes as opposite poles on a spectrum, along which national security players will tend to coalesce. This difference is more than of academic interest, because it dictates how the players use intelligence and the intelligence apparatus in the development, communication and execution of national security policy. And that in turn has significant implications for the nature of American democracy.

The 1947 National Security Act can be cited in support of the “unconstrained view,” in that it specifically charges the Director of Central Intelligence (DCI) (and by extension the CIA as his executive agent) to act as the principle advisor to the President on intelligence matters relating to the national security. And most would agree that the State of the Union Address is very much a matter of national security. Furthermore, the 1947 Act also charges the DCI with the responsibility “for providing national intelligence:

- to the President;
- to the heads of the departments and agencies of the executive branch;
- to the Chairman of the Joint Chiefs of Staff and senior military commanders;
- and where appropriate, to the Senate and House of Representatives and the committees thereof.”

But because the 1947 National Security Act leaves so many things undefined, it allows for the widest interpretation and in that context can be cited to buttress any position on this spectrum of attitudes. For example:

- What form or forms exactly is the DCI’s advice and “national intelligence” to take? Does it include only formal reports, either verbally or in writing? Or does it include the review of Presidential and Secretarial speeches, statements, etc.? Does it include only passive review of those instruments or active involvement in their creation?
Who is to initiate advice? Is it at the initiative of the DCI, or only at the invitation of the President, the National Security Advisor or other members of the NSC, executive departments, agencies and military commands?

Is there a difference between advice given by the principle advisor and “national intelligence?”

How one answers these questions determines where one falls with regard to the appropriate role of intelligence in the policy process.

Although most of these questions have never been formerly answered through Executive Order, legislation or judicial interpretation, the government has managed to function more or less well over the past 60 years as if it had answers to them in hand. These questions are customarily resolved on a dynamic basis through a variety of procedures established and modified by each presidential administration, by each Congress, and through the political process. Generally speaking, as each administration establishes its procedures for dealing with the overall issue of intelligence advice to the policymaking process, the players accept those procedures without challenge. Even in cases where both sides hold differing views as to the answer to one or more of the above questions, the players will frequently find a way to “peacefully coexist” on a given issue. Where they do clash, they customarily do so through the political process, which, regardless of specific outcome, always allows successors the opportunity to challenge again with potentially different outcomes.

The recent furor surrounding the \textit{casus belli} for the Iraqi War provides us a case in point. Both the President’s critics and supporters have addressed the veracity of the evidence presented by the President and Cabinet Secretaries justifying the initiation of hostilities against Saddam’s government in Iraq, and the appropriateness of the President’s reference in the \textit{State of the Union Address} to the British report on Iraqi efforts to obtain uranium from Africa.

In virtually every case, however, both supporters and critics have operated from a preconceived and unstated view of the appropriate role of intelligence in the policy process. For example, the \textit{Statement} by the DCI accepting responsibility for the questionable “intelligence” included in President Bush’s 2003 \textit{State of the Union} speech, and a critical article by a former senior CIA officer titled “Intelligence Shouldn’t Exist Just To Serve Policy,” present starkly contrasting views on the role of intelligence in policymaking. Yet neither actually addresses that issue directly.

The DCI’s \textit{Statement} makes clear that he believes the responsibility of the DCI (and his executive arm, the CIA) goes beyond providing intelligence in a policy neutral format, and includes making sure to the extent possible that the President does not make a mistake in developing or communicating policy, whether the President is relying directly or indirectly on intelligence. It should be noted that the current DCI also apparently accepts that “intelligence” plays an appropriate informational role in all aspects of policymaking, both public and private.

The McGovern article, by its very title, makes the case that intelligence analysis should be policy neutral. While the author does not explicitly make that statement, and his polemical tone helps to obscure the bottom line in the piece, the clear implications of the article are that intelligence analysis should be neutral as regards policy. Note for example the parenthetical reference to the way the author believes intelligence assessments were done in his day, “without fear or favor.” It would also appear that the author shares with DCI Tenet the view that “intelligence” should play an informational role in policymaking without regard to the public or private nature of that policymaking.

By the terms of the “unconstrained” view, because the CIA and much of the Intelligence Community had serious reservations regarding the substance of the British reports on Iraq’s nuclear program, the DCI had a responsibility to make certain that the President was advised by the CIA to
remove reference to those British reports from the *State of the Union Address*. And from the nature of the response to the DCI’s *Statement*, it is obvious that a wide range of policymakers, legislators, academics and journalists agree that the DCI has this responsibility.8

By extension, the holders of this position also generally hold a wider definition of what constitutes the national security policy process, than is commonly appreciated. Note, for example, that the “policy” document under discussion was a speech by the President, albeit a very important speech. And in October 2002 the DCI intervened in another presidential speech of much less moment than the *State of the Union Address*, for which intervention he has been praised but not criticized by those policymakers who have chosen to address this issue in public.9 Apparently those who share DCI Tenet’s view of his responsibility clearly see any presidential statement (and by extension that of his closest advisors and cabinet members) as part of the policy process that the Intelligence Community is obligated to support. This view at its broadest holds that it is incumbent on the DCI to take strenuous measures to assure the veracity of all policy statements, both public and private, as they may deal with matters on which the Intelligence Community has some information.

One can conclude from the DCI’s *Statement*, and the statements from the White House noting that the CIA reviewed the President’s address, that the current administration accepts the “unconstrained” view of intelligence support to policy. Furthermore, based on statements by National Security Advisor Condoleezza Rice and efforts by members of the National Security Council (NSC) and White House staffs to coordinate various parts of the President’s State of the Union Address, it is clear that this administration views the DCI’s intelligence advisory role to include active involvement in both the development and communication of national security policy. Ms. Rice stated on 11 July 2003 that the wording used in President Bush’s speech had been reviewed and changed by the CIA, and that some “specifics about amount and place” had been changed, and that after the changes “the CIA cleared the speech in its entirety.” According to press reporting, detailed discussions were held between a nuclear proliferation expert at the NSC and a proliferation expert at the CIA over the content of the speech relating to the putative Iraqi nuclear program.10

If we conclude that the DCI and “intelligence” are to play an active role in developing and communicating national security policy, at whose initiative are they to play this role? To wit, Ms. Rice said that “if the CIA, the director of central intelligence (sic), had said, ‘Take this out of the speech,’ it would have been gone, without question.” And Senator Pat Roberts, Chairman of the Senate Select Committee on Intelligence stated “it was incumbent on the director of intelligence to correct the record and bring it to the immediate attention of the president.” And an unnamed Democratic member of the SSCI was quoted by the *Washington Post* as saying that DCI Tenet was repeatedly asked in closed hearings on 16 July why the CIA had “permitted” the unfounded Iraqi uranium allegation in the address.11 Clearly, there would seem to be wide agreement that the initiative lies, at least in part, with the DCI, and is not solely dependent on the initiative of the president or his cabinet members and advisors.

As noted above, the countervailing view of the role of intelligence in the policy process, holds that to the extent possible, the DCI should insure that the Intelligence Community strives to provide intelligence advice to the president and his advisors in a policy neutral format. While very few would argue that this goal can be attained 100% of the time, many see it as a necessary constraining force. The primary argument for this is that anything less undermines the credibility of the Intelligence Community, and particularly the Office of the DCI and the CIA. In general, there appears to be an acceptance of the fact that departmental intelligence agencies12 are intended to support policymakers within their respective departments or military services, and thus their product will be in many cases “policy supportive.” There is, however, a strong expectation on the part of many in the national security community that the national agencies should avoid even the appearance of policy bias in their products.
A good example of a policy neutral approach to intelligence can be found in the famous “missile gap” case in the run-up to the 1960 Presidential Election. Despite the fact that the Kennedy Campaign had used much of the material provided to the press by the Gaither Committee to substantiate its charge that the USSR held a commanding lead over the U.S. in the deployment of intercontinental ballistic missiles, President Eisenhower refused to allow CIA intelligence on the subject to be released. It has been argued that this decision was a factor in the loss of the election by Richard Nixon, since the available national intelligence made clear that there was no missile gap, and there was not likely to be one for the foreseeable future. In this case, President Eisenhower chose not to allow intelligence to become embroiled publicly in the political process. One can argue the merits of Eisenhower’s decision, but it is taken by many analysts in CIA and the other national agencies as the proper way to handle national intelligence.

This view has a long tradition within the CIA, and it has often been criticized by members of the national security community as a bar to effective CIA intelligence support to policymakers. For example, as part of the continuing educational effort for analysts at CIA, the Sherman Kent School for Intelligence Analysis at the CIA University has published a series of occasional papers addressing among other subjects the proper relationship between the analyst and the policymaker. The author of these papers is at some pains to assure analysts that lowering the wall between intelligence analysis and the policymaking process will not damage intelligence credibility (if proper tradecraft is used) and will make intelligence more relevant to the policymaker.13

Criticisms of the “policy neutral” view have a long tradition among policymakers. The current Deputy Secretary of Defense Paul Wolfowitz was selected as a member of the so-called Team B, “which challenged the expertise, methods, and judgments of Intelligence Community analysts working on Soviet strategic military objectives (specifically, National Intelligence Estimate 11-3-8 for 1977)”. The underlying issue in this case was the perceived failure of the NIE to directly address the implications for Soviet intentions of the USSR’s ongoing strategic buildup. While serving as the Dean of the Paul H. Nitze School of Advanced International Studies, Ambassador Wolfowitz was appointed to the Commission on the Roles and Capabilities of the U.S. Intelligence Community. Throughout this period he continued to argue for a more “policy actionable” approach to national intelligence. According to press reports, Ambassador Wolfowitz, as Deputy Secretary of Defense in the current administration, has been associated with a large group of policymakers who have argued strenuously that the Intelligence Community, and specifically the CIA, has not produced intelligence on current policy issues that has been helpful in the development, articulation and execution of policy.14

From the policy neutral perspective, the primary concern, as noted above, is that the close involvement of intelligence in the making, communication and execution of specific national security policies will undermine the credibility of the intelligence itself, and the intelligence organizations involved. Often, critics attack the intelligence organization, such as the CIA, as “shilling” for a policymaker if the intelligence product is seen as too supportive, or is used openly in the political process. In this case the intelligence agency itself, or the DCI, becomes sucked up in the maelstrom of political conflict over the policy under debate. The net effect of this, to quote Senator John Kerry, D-Mass., does “... nothing to make this country safer and will simply further erode the confidence of the American public and our allies around the world.”15

The caution to the intelligence provider, and to the policymaker who uses that intelligence, may well be Aristotle’s axiom, “moderation in all things.” If the intelligence player or product is too supportive of policy, or appears to be too supportive, then both will be subject to criticism and a loss of credibility. If, on the other hand, intelligence is too “neutral” and too high a wall is kept between intelligence and policy, then the intelligence will be subject to criticism and a loss of relevance.
Complicating this picture for the intelligence player is the fact that critics will also often make the case that they want “objective” analysis, that can be used by all the participants in the policy debate. When that is translated into reality, however, it most often means that the critic’s side in the debate is not faring as well as the critic believes it should because the intelligence input favors the other side. Finally, as noted above, even the legislation creating the current intelligence structure does more to complicate than to answer the question as to the appropriate role of intelligence in the policy process.

ENDNOTES - CHAPTER 8

1. The CIA Publications Review Board has reviewed the manuscript for this chapter to assist the author in eliminating classified information and poses no security objection to its publication. This review, however, should not be construed as an official release of information, conformation of its accuracy, or an endorsement of the author’s views.

2. I use the word “intelligence” here to describe two entities: (1) Intelligence in its generic sense of information that has been collected, processed, exploited and analyzed, and which contains information from both clandestine and open sources; and (2) The U.S. intelligence apparatus, and specifically the Director of Central Intelligence and the Central Intelligence Agency, which collect and convert the aforementioned information into an intelligence product. I will use the term “national security community” in its most generic sense, to include not only elected, appointed and career officials currently serving in the government, but also those legislators, press commentators, academics and journalists who specialize in the study of national security policy. These latter individuals are often former government officers, and many will return to government upon the vagaries of the next round of elections. In addition, those journalists and academics who never serve in government still play a significant role in the formulation and execution of policy by virtue of their influence on public opinion. The Intelligence Community is composed of four “national” intelligence agencies—CIA, NSA, NIMA and NRO—and 10 “departmental” agencies—DIA, State/INR, the military service intelligence agencies, Coast Guard intelligence, and the intelligence offices in the Departments of Justice, Treasury, and Energy. See, for example of academic approach, Jack Davis, “Improving CIA Analytic Performance: Analysts and the Policymaking Process,” Kent Center Occasional Papers, Vol. 1, No. 2, September 2002; and Jack Davis, “Tensions in Analyst-Policymaker Relations,” Kent Center Occasional Papers, Vol. 2, No. 2, January 2003.

4. See Sec. 103 [50 USC 403-3] “Title I - Coordination for National Security: Responsibilities of the Director of Central Intelligence.”

5. For example, “During the prolonged tug-of-war between the branches of government over Iran-Contra, the Reagan White House held fast to its position that the Constitution permitted the President to defer covert action notification to the Congress indefinitely if he felt circumstances so warranted. Congress did not concur with this assertion but was in no position to do anything about it. In the end, the executive and legislative branches agreed to disagree on the matter.” See Marvin, C. Ott, “Partisanship and the Decline of Intelligence Oversight,” International Journal of Intelligence and Counterintelligence, Vol. 16, No. 1, Spring 2003, p. 79.

7. Ibid., “It does not speak well for a director (sic) of Central Intelligence to shy away from serving up the intelligence community’s (sic) best estimate anyway (without fear or favor, the way we used to operate).”

12. See note 4 above.

13. The “policy neutral mission” view is most closely associated with Sherman Kent, the first Deputy Director and Vice Chairman (and subsequently Director and Chairman) of the CIA’s Office of National Estimates and the Board of National Estimates, both created in 1950 by then DCI, General Walter B. Smith. See, for example, Davis, “Paul Wolfowitz on Intelligence Policy-Relations,” Studies In Intelligence, Vol. 39, No.5, 1996, pp. 36-37.

14. See Davis; Ironically, Amb. Wolfowitz’s stated position on this issue was based on his concept that CIA intelligence was not objective because it did not offer alternative hypotheses to explain the observable facts, and therefore such CIA analysis was too policy supportive; See for example, Warren P. Strobel and Jonathan Landay, “Pentagon, CIA In Bitter Dispute On Iraq,” Philadelphia Inquirer, October 28, 2002; Seymour Hersh, “Selective Intelligence,” The New Yorker, 12 May 2003; and Julian Borger, “The spies who pushed for war,” The Guardian, July 17, 2003. These are simply examples of numerous press reports on this issue over the past year.

15. See for example McGovern; Richard Cohen, “Sword-Passing,” Washington Post, July 24, 2003, p. 21; and Jay Taylor, “When Intelligence Reports Become Political Tools . . .,” Washington Post, June 29, 2003, p. B02; see the comment by former Senator Bob Kerry, who noted that the administration had decided “OK, we’ll make George Tenet walk the plank”; Raum.

16. See note 13 above.
PART II

THE INTERNATIONAL SYSTEM AND ENVIRONMENT
CHAPTER 9

THE INTERNATIONAL SYSTEM IN THE 21ST CENTURY

Alan G. Stolberg

For strategic leaders of the 21st century primarily concerned with the issues of foreign policy and national security, the international system with which they will be dealing is likely to only partially reflect the traditional international system. While the nation-state, first codified by the Treaty of Westphalia in 1648, remains the dominant political body in international politics, its ability to influence events and people is being challenged by an assortment of nonstate actors, failed or failing states, and ungoverned regions. This is occurring in combination with the transnational threats posed by terror, the proliferation of weapons of mass destruction (WMD), crime, drugs, pandemics, and environmental degradation, as well as by elements of the system that also have potentially positive impacts such as globalization and the information revolution.

The international system refers to the structure of relationships that exist at the international level. These include the roles and interactions of both state and nonstate actors, along with international organizations (IO), multinational corporations (MNC), and non-governmental organizations (NGO). States make foreign and national security policy against this external environment. Opportunities for both conflict and cooperation arise within this framework. The international community has tried for years to maintain order and prevent conflict using international institutions like the United Nations and international legal regimes like the Geneva Conventions.

The international system frames the forces and trends in the global environment; it also frames the workspace of national security policy and strategy makers. As they work through the formulation process, with an understanding for the interests and objectives of any actors in a given situation, those involved in the business of policy and strategy making must be able to account for the associated state and nonstate actors present in the international system. In addition, it has become particularly important that they be able to assess the competing values associated with the global actors, both state and nonstate, especially in relation to the Global War on Terror. Also, given the criticality of being able to call upon other nation-states and international or multinational organizations for support, the strategist or policymaker must know which alliances and coalitions are stakeholders in the issue in question. Another related element of the international system is the economic condition, as influenced by both the positive and negative components of globalization, that helps determine the amount of power actors can wield in the system. It is also important to be able to identify the international legal tenets and regimes that bear on the situation. Finally, the 21st century policy and strategy maker must be able to understand the threats to order in the international system represented by both conventional and transnational entities. If the policymaker or strategist can accurately assess all these factors, he might be able to determine friends and enemies, threats and opportunities, and capabilities and constraints inherent in the contemporary world.

Threats, challenges, and opportunities can come in many shapes and sizes. A traditional threat might take the shape of a nation-state in possession of WMD and a hostile attitude. This is also true for a nonstate actor, potentially going down to the individual level if he is willing to fly an airplane into a building. Less direct but also significant in the 21st century world are the threats that can be made to the successful execution of a nation-state’s policies, if other nation-states are unwilling to provide support in a given situation. This lack of support can manifest itself in an opposing vote in an international organization like the United Nations (UN), a multinational organization like the North Atlantic Treaty Organization (NATO), or an international regime such as the International
Atomic Energy Agency (IAEA). It can equally be demonstrated by the refusal of a state to grant transit or over flight rights to the forces of another state.

The international system also affords the strategy or policy maker numerous opportunities for advantage. If a nation-state can come to the assistance of another nation-state or region in time of need like a natural disaster or failing economy, the opportunity exists to demonstrate concern and ultimately gain some level of influence with the entity in need. The same may be true when cooperating with other states as they transition toward democratic forms of government or market economies, or when accepting an international regime like an arms control treaty. In all cases, these are opportunities to gain acceptance and influence through and with other actors in the international system.

Who are the Actors?

Nations and states are not the same. Nations represent groupings of a people that claim certain common bonds, such as descent, language, history or culture. Collectively such an aggregation would constitute a national entity.3 States, also known as nation-states, have a legal character and possess certain rights and duties under the tenets of international law. The 1933 Montevideo Convention on Rights and Duties of States, that considered the classic legal definition for states, indicates that states possess the following characteristics: permanent population, defined territory, and a government capable of maintaining effective control over its territory and conducting international relations with other states.4 In addition, the government must possess a monopoly on the legitimate use of force in the state, and other states in the international system must recognize the sovereignty of that government.5

The concept of sovereignty came into existence with the 1648 Treaty of Westphalia ending the Thirty Years War in Europe, when, for the first time, the authority of state governments became officially recognized as greater than the authority of organized religion in formal state affairs. In contemporary international law, sovereign states are treated as equals, every recognized state can participate in the international system on the same plane. This sovereign equality possesses the following elements:

1. States are legally equal.
2. Every state enjoys the rights inherent in full sovereignty.
3. Every state is obligated to respect the fact of the legal entity of other states.
4. The territorial integrity and political independence of a state are inviolable.
5. Each state has the right to freely choose and develop its own political, social, economic, and cultural systems.
6. Each state is obligated to carry out its international obligations fully and conscientiously and to live in peace with other states.6

Since the 17th century, the nation-state has been the dominant entity in the international system, in part because of the power the concept of sovereignty gave the recognized states—both in terms of absolute domestic control and independence on the international level.

But nation-states have never been alone in the international system. A variety of nonstate actors has always challenged their influence. The term nonstate actor typically refers to any participant in the international system that is not a government. It is an entity or group that may have an impact on the internationally related decisions or policies of one or more states. Examples of nonstate actors would be international organizations (IO), non-governmental organizations (NGO), multinational corporations (MNC), the international media, armed elements attempting to free their territory from external rule, or terrorist groups. An individual may also be a nonstate actor.7
An IO is a formal institutional structure that transcends national boundaries. States create them by multilateral agreement or treaty. IOs normally function as an association of states that wields state-like power through governmental-like organs. The founding treaty defines the limits of the IO’s legal competence. This is the primary difference between a state and an IO. The IO only possesses the powers granted to it in its originating document by the states that created it, and cannot legally act beyond those powers. A state possesses the rights and duties recognized by international law, subject to the provisions of that law, and can involve itself in almost any activity of its choosing. IOs are completely dependent on member states for support and resources, both political and practical (like money and personnel). The result is that every IO is dependent on a sufficient number of member states believing that it is in their national interest to support the IO and its activities. Without member state support, the IO will not be able to function. Examples of IOs include the United Nations (UN), North Atlantic Treaty Organization (NATO), and the European Union (EU).

Different from IO’s that are state based, NGOs are voluntary organizations of private individuals, both paid and unpaid, who are committed to a wide range of issues not on the behalf of any specific state government. Owing to increased interconnectedness, partly associated with improvements in communications technology and transportation, specialized NGO organizations, agencies, and groups have risen around the globe, and have an unprecedented level of influence in the modern international system. NGOs typically fall in one of two categories: those that have a universal non-commercial (non-profit), and non-partisan focus, and those that are primarily motivated by self-interest. The former are likely to involve humanitarian aid organizations, human rights groups, environmentalists, or new social movements. Representative organizations of this first type are Amnesty International, Greenpeace, the Red Cross, and Save the Children.

The second NGO grouping, those that are directed by self-interest, is usually best represented by multinational corporations (MNC). MNCs, sometimes called transnational corporations, are global actors that execute commercial activities for profit in more than one country. Estimates are that the largest 500 MNCs control more than two thirds of world trade. While not a new concept given that predecessors like the Hudson Bay Company and the British East India Company were operational over 300 years ago, contemporary MNCs such as General Motors or IBM have been able to take advantage of advances in technology and communication to become truly global in nature, with only a corporate headquarters in a single given country. Production no longer has to be located at the headquarters. With their enormous wealth, the impact of MNCs on the global economy is immense. Much of this influence comes in the arena of international commerce. In addition to being credited as a modernizing force in the international system through the establishment of hospitals, schools, and other valuable infrastructure in the Third World, MNCs are also charged with exploiting underdeveloped states in their conduct of free trade.

To combat violations of the world order, the international community has created a number of regimes to ensure that widely accepted principles, procedures, norms, and rules are in place to govern particular issues in the international system. The intent is to create opportunity for states to use these regimes as fora to cooperate to achieve beneficial outcomes. Membership in these special purpose organizations is generally open to all relevant state actors. The success or failure of regimes is based on the level of coordination and cooperation of policies among the member states.

International regimes can take the form of legal conventions, international agreements, treaties, or international institutions. Special issue areas that they occupy include economics, the environment, human rights, policing, and arms control. Contemporary regimes like the World Trade Organization (WTO), General Agreement on Tariffs and Trade (GATT), World Bank, International Monetary Fund (IMF), Kyoto Protocol on the Environment, Geneva Conventions, International Criminal
Court (ICC), United Nations Convention on the Law of the Sea, and the Strategic Arms Reduction Treaties (START) I and II are all intended to specify general standards of behavior and identify the rights and obligations of signatory states.\textsuperscript{12}

The checks and balances created for the international system by the primary state actors and regimes have still been unable to assure global stability and good governance. This has been particularly manifest in the increase in the number of failed states and ungoverned spaces as well as the appearance of rogue states in the later part of the 20th century.

The problem of failed states has emerged since the end of the Cold War. It indicates that a breakdown of law, order, and basic services, such as education and health for the population, has occurred. This situation arises when a state is no longer able to maintain itself as a workable political and economic entity. A failed state is ungovernable and has lost its legitimacy from the perspective of the international community. In some cases, power lies in the hands of criminals, warlords, armed gangs, or religious fanatics. Other failed states have been enmeshed in civil war for many years. In essence, the government of the state has ceased to function (if it exists) inside the territorial borders of the original sovereign state. The end of the Cold War catalyzed the state failure process because the rival powers no longer provided economic and military assistance to former client regimes in the underdeveloped world. The governments of the failed states in countries like Haiti, Somalia, Liberia, Cambodia, and Rwanda were unable to survive without that assistance.\textsuperscript{13}

While not necessarily a component of a failed state, ungoverned spaces feature rugged, remote, maritime, or littoral areas not effectively governed by a sovereign state. The state that theoretically should control the territory either lacks the willingness or ability to exercise authority over part or all of a country. Ungoverned spaces are areas where nonstate actors that threaten domestic or international order can exploit the lack of legal norms and processes. Examples include northern parts of sub-Saharan Africa and the Northwest Territories in Pakistan.\textsuperscript{14}

An additional failure to maintain complete order in the international system is associated with the development of the rogue state. A rogue state is a state that frequently violates international standards of acceptable behavior. This is a sovereign entity that is openly aggressive, highly repressive, and intolerant with little or no regard for the norms of the international system. As such it is a threat to international peace. The rogue state may attempt to exert influence over other states by several means. It might threaten to or actually develop, test, and field WMD or ballistic missile systems. It might traffic in drugs, break international treaties, or sponsor terrorism. It is likely to be aggressive toward other states. Current example rogue states are North Korea and Iran.\textsuperscript{15}

Transnational threats are threats to the international system that cross state borders. Such threats emerged or increased dramatically in the latter part of the last century. While the term transnational relates to any activity that cross state boundaries, transnational threats is a technical term that usually refers to activities with minimal or no governmental control. Three types of movement can be associated with transnational behavior: movement of physical objects, to include human beings, movement of information and ideas, and movement of money and credit.\textsuperscript{16}

The combination of the cross border movement with illicit or dangerous activities has resulted in the identification of an emerging set of threats to human security, the ability of states to govern themselves, and ultimately the stability of the international system at large. These transnational threats fall into two broad categories:

1. Direct threats from human beings (terrorism, organized crime, drug trafficking, illegal alien smuggling, small arms transfers, and smuggling of WMD).
2. Threats from impersonal forces (disease and international pandemics, population growth and migration, resource shortages, global environmental degradation, climate change, and natural disasters like earthquakes, volcano eruptions, hurricanes, or tidal waves).\textsuperscript{17}
Transnational threats have been expanding since the end of the Cold War for a number of reasons. These include the premise that many emerging democracies are the vestiges of former authoritarian states where there has been a long tradition of coercion, violence, and corruption. Such states relied more on roles and relations than on rules and regulations. Thus, many governments have been constrained by political norms that place factional loyalties above commitment to public policies. Also, as was the case with failing states and ungoverned spaces, diminished assistance from the developed world helped reduce the ability of governments to police their borders.\textsuperscript{18}

Clearly, transnational threats, along with other traditional state-to-state threats, have created a number of significant challenges for the maintenance of stability in the international system. These threats and the problems associated with failed and rogue states, ungoverned spaces, and potential competition and conflict among the state and nonstate actors, also present some opportunities. Some states and nonstate actors can advance their individual causes in support of their national, organizational, or group interests by exploiting instability in the system. This interaction among the actors represents the international system at work.

**How Does the International System Function?**

As players on the international stage, both state and nonstate actors either work alone or attempt to work with other elements of the system. Such relationships might be with other states or nonstate actors on a bilateral basis; formal groupings of states, IOs, NGOs, or other nonstate actors; or informal, even unacknowledged cooperation with other system members. States can opt to form or join existing alliances or coalitions. An alliance is a formal security agreement between two or more states. Typically states enter into alliances to protect themselves against a common threat. By consolidating resources and acting in unison, members of an alliance believe they can improve their overall position in the international system and their security relative to states that are not members of their alliance. Additional benefits to alliance membership might include the ability to offset the cost of defense. Unless an alliance partner is an actual liability, membership in an alliance allows states to supplement their military capability with those of their alliance partners. The alliance is thus, at least theoretically, less expensive than a unilateral approach to security. Also, economically related alliances can provide expanded economic benefits through increased trade, assistance, and loans between allies.\textsuperscript{19} Alliance examples include NATO and the Warsaw Pact.

Coalitions are normally less formal than alliances. Normally they represent a broad grouping of often very diverse states temporarily united for a specific purpose, typically military action.\textsuperscript{20} States often agree to participate in a coalition strictly as a matter of convenience. Coalitions are likely to be temporary, while alliances can frequently endure for lengthy periods. Examples would be the American-led coalitions during the first Persian Gulf War (Operations DESERT SHIELD/STORM) and the second conflict (Operation IRAQI FREEDOM).

Two ways states might use alliances or coalitions are to balance or to bandwagon. Both refer to decisions, conscious or subconscious, about relations with other system members. A state is balancing when it joins a weaker alliance or coalition to counter the influence or power of a stronger state or group of states. “Balancing happens when weaker states decide that the dominance and influence of a stronger state is unacceptable and that the cost of allowing the stronger state to continue their policies unchecked is greater than the cost of action against the stronger state.”\textsuperscript{21} Balancing can be either external or internal in origin. In the external case, weaker states form a coalition against a stronger state, shifting the balance of power in their favor. A weaker state can also balance internally by deciding to undertake a military build up to increase its power with respect to the stronger state. Balancing in the international system can also be either a hard or soft action. It would be hard when
it is intended to increase or threaten the use of military power of one state relative to another. A soft usage would be when a weaker state or states want to balance a stronger opponent but believe use of military power is infeasible. In that situation, states employ non-military elements of power to help neutralize the stronger states.22

Bandwagoning is different from balancing because it will always refer to the act of a weaker state or states joining a stronger state, alliance, or coalition. Bandwagoning occurs when weaker states determine that the cost of opposing a stronger state exceeds the benefits to be gained from supporting it. The stronger power may offer incentives like territorial gain or trade agreements to entice the weaker actor to join with it.23

Actors on the global stage, both state and nonstate, decide to participate in alliances and coalitions and to conduct policies in support of balancing and bandwagoning based on their assessment of their relative power in the international system. This reflects one of the pervasive concepts about the system—that it represents or responds to a balance of power. It is important to distinguish between balance of power as a policy (a deliberate attempt to prevent predominance on the part of another actor in the international system) and balance of power as a description of how the international system works (where the interaction between actors tends to limit or restrict any attempt at hegemony and results in a general status of stability). The most widely accepted usage of the balance of power term is related to the later concept: the process that prevents or opposes the emergence of a single dominant actor. Theoretically, the international system works to prevent any actor from dictating to any other actor—that is, it actually works to maintain the anarchy of equal, independent, and sovereign states. Balance of power does that for the system.24 In effect, balance of power describes the distribution of power in the international system in both equal and unequal portions. Given an assumption that unbalanced power is dangerous for the maintenance of stability, actors attempt to conduct policy that produces equilibrium of power in the system. This helps form the rationale for actors to bandwagon or balance as they form alliances or coalitions against potentially dominant competitors.25

Belief that equilibrium protects the sovereignty of the states, perceived inequality of power, and the threat of violence combines to give both dominant and subordinate actors a shared (if unequal) interest in maintaining order in the international system. Balance of power becomes a type of compromise among actors that find stability preferable to anarchy, although it results in a system that favors the strong and wealthy over the weak and poor. More powerful actors, like the great power states, play leading roles in a balance of power international system because they have superior military force and the ability to wield key technology.26

Ultimately, the balance of power concept fulfills three functions in the international system:
1. It prevents the system from being transformed by conquest into a universal empire.
2. Localized balances of power serve to protect actors from absorption by a dominant regional actor.
3. Most important, the balance of power has helped create the conditions in which other elements or characteristics of the international system can develop (i.e., diplomacy, stability, anarchy, war).27

Above all, this third function ensures the importance of the balance of power concept to the international system for the foreseeable future.

For those actors in the international system less comfortable with operating in alliances and coalitions, collective security provides an alternative. In formal terms, collective security is a framework or institution designed to prevent or neutralize aggression by a state against any member state. All state members are jointly responsible for the physical security of every other
member. Membership in such an institution permits states to renounce the unilateral use of force because the institution guarantees to come to the assistance of the aggrieved state and sanction the aggressor. The overall intent of collective security is the maintenance of peace among members of the framework or institution (i.e., the UN, League of Nations), not between the system and external elements, as in the case of an alliance.28

The search for security is the most significant concern in some manner, shape, or form for the vast majority of actors in the international system. Security implies the absence of threats to one’s interests. In absolute terms, complete security would mean freedom from all threats. Historically, the term security equated to the military dimension of security. Thus, security meant security from war or violent conflict. But the 20th century witnessed an expansion of the concept to include other security issues such as those relating to the economy or environment. Economic security is the need to ensure that a hostile actor cannot control the supply of goods and services, or the prices for those goods and services.29 Examples are access to water, oil, or natural gas. Environmental security implies protection from environmental dangers caused by natural or human processes due to ignorance, accident, mismanagement, or design and originating within or across national borders.30 Example issues are air and water quality, global warming, famine, or health pandemics.

How an actor in the international system chooses to interpret the concept of security helps determine participation in alliances or coalitions, involvement in collective security frameworks or institutions, and balancing or bandwagoning behaviors. In all cases, these actors consider their ability to wield all the elements of power they have available, whether or not to use force, and—most significantly—what interests their ultimate policies will support.

Power in the international system is the ability of an actor or actors to influence the behavior of other actors—usually to influence them to take action in accordance with the interests of the power-wielding state. Power does not have to be used to be effective. It is enough that the other actors acknowledge it either implicitly or explicitly. The reason for this is that the potential exercise of acknowledged power can be as intimidating as its actual use. Historically, some international actors have sought power for power’s sake; however, states normally use power to achieve or defend goals that could include prestige, territory, or security.31

There are two general components of power: hard and soft. Hard power refers to the influence that comes from direct military and economic means. This is in contrast to soft power, which refers to power that originates with the more indirect means of diplomacy, culture and history. Hard power describes an actor’s ability to induce another actor to perform or stop performing an action. This can be done using military power through threats or force. It can also be achieved using economic power—relying on assistance, bribes, or economic sanctions. Soft power is a term used to describe the ability of an actor to indirectly influence the behavior of other actors through cultural or ideological means.32

In contrast with the primary tools of hard power—the ability to threaten with sticks or pay with carrots—soft power attracts others or co-opts them so that they want what you want. If a state can attract another state to want what it wants, it can conserve its carrots and sticks. The sources of soft power are culture (when it is attractive to others), values (when there is no hypocrisy in their application), and foreign polices (when they are seen as legitimate in the eyes of others). Soft power uses an attraction to shared values and the perceived justness and duty of contributing to the achievement of those values.33 It is much more difficult to systematically or consciously develop, manage, control, or apply than hard power.

Whether it is hard or soft, an actor’s power is measured in terms of the elements of power that it actually possesses. Such measurement is always done in relation to another actor or actors and in the context of the specific situation in which the power might be wielded. Are the available elements of power appropriate given the potential foe or the nature of the conflict?34 American
security professionals have traditionally categorized the elements of power in terms of the acronym DIME for the diplomatic, informational, military, and economic elements. This concept has been expanded in some of the most recent national level strategies to DIMEFIL: diplomacy, information, military, economic, finance, intelligence, and law enforcement. Regardless of which specific elements of power are available for potential use, the most important consideration for an actor’s ability to transform potential power into operational power is political will. Effectiveness of the actor’s government and depth of domestic support (or leadership effectiveness and stakeholder support for nonstate actors) are crucial for developing and sustaining political will. Without either of those components, the likelihood for successful use of power is significantly reduced.

One of the most visible uses of power is in the use of force. There are a number of reasons given for its employment. In 1966, the classic analyst of the use of force and influence, Thomas Schelling, described the use or threat of force as a kind of “vicious diplomacy.” He described four different ways in which force might be used: deterrence, compellence, coercion, and brute force. Deterrence seeks to prevent another actor from doing something that it might otherwise have done. This is implemented over an indefinite period of time by convincing the deterree that he cannot successfully achieve the aim he seeks, sometimes by demonstrating sufficient force to prevent achievement and sometimes by promising a punishing response should the target engage in the action. An actor chooses to use compellence when it desires to make an enemy do something by a specific time deadline. It might have the positive effect of persuading an adversary to cease unacceptable behavior, or it might cause him to retreat from seized positions or surrender assets illicitly taken. Compellence is usually used after deterrence has failed, although that condition is not a prerequisite. It can carry the promise of inflicting an escalating level of damage to a foe until it meets demands. It might also provide some type of reward for meeting the demands. For both deterrence and compellence to be successful, both the threatened penalty and promised reward (if applicable) must be credible.

Coercion is the intent to inflict pain if an opponent does not do what you want. It is normally most successful when held in reserve as a credible threat. Signaling the credibility and intensity of the threat are keys to success. Different from compellence, coercion only offers a threat for noncompliance without a reward for compliance. Brute force is directly taking what the actor wants. It is not dependent on signaling intent to the opponent and succeeds when used based simply on the application of force. Brute force is ultimately not about asking, but taking whatever the actor wants through the direct use of force.

Virtually any action taken by an actor in the international system, whether it be peaceful or forceful, will likely be done for the purpose of supporting the interests of the executing actor. The national interest is intended to identify what is most important to the actor. Until the 17th century, the national interest was usually viewed as secondary to that of religion or morality. To engage in war, rulers typically needed to justify their action in these contexts. This changed with the coming of the Treaty of Westphalia in 1648. For a state, the national interest is likely to be multi-faceted and can be oriented on political, economic, military, or cultural objectives. The most significant interest is state survival and security. The term “vital” is frequently applied to this interest, with the “implication being that the stake is so fundamental to the well being of the state that it cannot be compromised” and may require the use of military force to sustain it. Other types of interests considered to be important are the pursuit of wealth and economic growth, the promotion of ideological principles, and the establishment of a favorable world order. In addition, many states believe the preservation of the national culture in the state to be of great significance. Ultimately, it is the state’s assessment of the importance of its national interests that will determine much or all of what it will do or not do within the international system.
Why Does the International System Behave the Way it Does?

Given a belief that the international system is composed of a structure and associated interacting units, political scientists in the late 1950s developed the concept known as levels of analysis to help analyze all the dynamics of interaction in the system. They believed examining problems in international relations from different perspectives on the actors would help determine why different units and structures in the international system behave as they do. They called the perspective points levels. Levels represent locations where both outcomes and sources of explanation can be identified. The five most frequently used levels of analysis are:

1. International systems—largest grouping of interacting or interdependent units with no system above them. Encompasses entire planet.
2. International subsystems—groups or units within the international system that can be distinguished from the entire system by the nature or intensity of their interactions with or interdependence on each other. [Examples: Association of Southeast Asian Nations (ASEAN), Organization of African Unity (OAU), and the Organization of Petroleum Exporting Countries (OPEC)].
3. Units—actors consisting of various subgroups, organizations, communities, and many individuals, all with standing at higher levels. [Examples: states, nations, multinational corporations (MNC)]
4. Subunits—organized groups of individuals within units that are able or try to affect the behavior of the unit as a whole. [Examples: bureaucracies, lobbies]
5. Individuals.

Making use of the levels of analysis, international relations theory attempts to provide a conceptual model with which to analyze the international system. Each theory relies on different sets of assumptions and often a different level of analysis. The respective theories act as lenses, allowing the wearer to only view the key events relevant to a particular theory. An adherent of one theory may completely disregard an event that another could view as crucial, and vice versa.

International relations (IR) theories can be divided into theories that focus primarily on a state-level analysis and those that orient on an overall systemic approach. Many, often conflicting, ways of thinking exist in international relations theory. The two most prevalent schools of thought are: Realism and Liberalism; though increasingly, Idealism, also known as Constructivism is becoming a competing concept.

Realism has been a major, if not the dominant, theory of international relations since the end of World War II. From the realist perspective, struggle, conflict, and competition are inevitable in the international system. Mankind is not benevolent and kind but self-centered and competitive. Realism assumes that the international system is anarchic because there is no authority above states capable of regulating their interactions; states must arrive at relations with other states on their own, rather than by obeying the dictates of some higher entity. States and not international institutions, non-governmental organizations, or multinational corporations are the primary actors in the international system. For states to thrive and survive, they must orient on security as their most fundamental national interest. Without security, no other goals are possible. States must struggle for power in that system; this produces the constant competition and conflict. Military force is the ultimate arbiter in the struggle for power. Each state is a rational actor that always acts in accordance with its own self-interest. The primary goal is always ensuring its own security. Strong leaders are key to success in this environment and will be required to exhibit realistic vice morally idealistic based positions.
Realism asserts that states are inherently aggressive, and territorial expansion is only constrained by opposing state(s). This aggressive orientation, however, leads to a security dilemma because increasing one’s own security produces greater instability as opponents build up their forces to balance. Thus, with realism, security is a zero-sum game where states make only relative gains.44

A variation of realism is called neorealism. Rather than the realist view of the influence of human nature, neorealists believe that the structure of the international system controls and impacts all actors. In effect, it is the system itself that is in charge. States, with their orientation on survival, have a primary if not sole focus on war and peace. For a neorealist, state interests shape behavior. In neorealism the success of regimes is totally dependent on the support of strong powers.45

The international system constrains states. The system comprises both the states and the structure within which they exist and interact. From a neorealist point of view, cooperation is more likely than a pure realist claims because states are more interested in relative than absolute gains. States are often willing to bargain to give something up.46

Several principal notions, especially since Immanuel Kant drafted “Perpetual Peace” in 1795, have characterized liberalism as another fundamental theoretical basis for international relations:

Peace can best be secured through the spread of democratic institutions on a worldwide basis. Governments, not people cause wars. . . . Free Markets and human nature’s perfectibility would encourage interdependence and demonstrate conclusively that war does not pay. . . . Disputes would be settled by established judicial procedures. …Security would be a collective, communal responsibility rather than an individual one.47

Liberalism, which in this context differs from liberalism as used in the liberal-conservative political paradigm, maintains that interaction between states goes beyond the political to the economic components of the international system—to include commercial firms, organizations and individuals. Thus, instead of the realist anarchic international system, liberals see plenty of opportunities for cooperation and broader notions of power like cultural capital. Liberals also assume that states can make absolute gains through cooperation and interdependence—thus peace and stability are possible in the system.48

One primary hope of liberals for stability is the democratic peace concept. The main propositions of this concept are: peace through the expansion of democratic institutions; populations of states focus naturally on their economic and social welfare as opposed to imperialistic militarism; the subordination of states to an international legal system; and commitment to collective security enhances stability. Perhaps the most important element of the democratic peace concept is the belief that liberal democratic states are likely to remain at peace with one another. The international judicial system, combined with the perceived economic and social success of liberal states, normally dictates avoidance of external conflict, especially with another liberal democratic state.49

As with classic realism, liberalism has a related alternative called neoliberalism. This postulates that the system is not in charge of everything; states make their own decisions. States are not only interested in survival, but also in cooperation. International institutions can promote cooperation; there are options beyond war and peace. Rules, principles, ideas, social norms, and conventions must be considered. With neoliberalism there is a much greater degree of cooperation in the international system than neorealism is willing to acknowledge. To a great degree this is as a result of the success of international regimes.50

Regimes as a framework of rules, expectations, and prescriptions between actors can change state behavior, particularly in the arena of cooperation.51 Regimes often develop their own interests and become actors in the system.52 Regimes come about for many reasons. They can benefit all actors in the system and do not require a hegemonic state for support. The more times states cooperate in a regime, the more opportunity exists to change the behavior of a particular state. In
effect, regimes can change state behavior. There is a shared interest that can ultimately benefit both parties. Institutional incentives can motivate states to cooperate peacefully even in situations when force might be considered. A regime’s intervention in state behavior can lead to cooperation. The result is that the existence of regimes makes cooperation more likely—which, in turn, could help drive change.53

Idealism, also known as constructivism, rejects standard realist and liberal views of the international system, arguing that states derive interests from ideas and norms. Idealists believe that the effects of anarchy in the system are not all defining, but “anarchy is what states make of it.”54 For an idealist, the state’s identity shapes its interests. To understand change, an idealist must assess a states’ identity. States are social beings and much of their identity is a social construct. If a state identifies itself as a hegemonic global policeman, it will shape its interests accordingly. States that self-identify as peace-loving economic powers emphasize different interests. Who a state is—primarily in the form of culture—will shape that state’s identity. States understand other states through their actions. Key for an idealist, one state’s reaction will affect the way another state behaves.55

Summary.

In the end, there is no single answer for why any actor in the 21st century international system behaves the way that it does. There is also no single description for all the actors in the system, as well as no predictable method that any of them will use to interact. In effect, even considering the complexities of the 20th century, the 21st century international system is highly likely to be more complex than ever. Clearly the nation-state will continue to be the primary actor, but it will have increasing competition from the nonstate actors that have emerged in the later part of the last century. Advances in communication and transportation, along with the information revolution’s contribution to globalization, have provided both emerging states and nonstate actors a degree of international influence never previously imagined. From the perspective of a 21st century strategic leader, these emerging state and nonstate actors and emerging transnational threats will create numerous challenges and opportunities. These challenges and opportunities will force leaders to address issues like determining the exact threat, assessing the intensity of national interests at stake, deciding whether to employ hard or soft power, and opting to work with alliances or coalitions or to go it alone. Ultimately, understanding these issues and many others dependent on the situation will be critical for the success of any actor in the 21st century international system.

CHAPTER 10

INTERNATIONAL RELATIONS THEORY AND AMERICAN GRAND STRATEGY

Janeen M. Klinger

Theory cannot equip the mind with formulas for solving problems, nor can it mark the narrow path on which the sole solution is supposed to lie by planting a hedge of principles on either side. But it can give the mind insight into the great mass of phenomena and of their relationships, then leave it free to rise into the higher realms of action.

Carl von Clausewitz, On War

This chapter takes as its starting point Clausewitz’ view concerning the pedagogic role of theory for practitioners illustrated by the opening quote. Like Clausewitz’ theory of war, scholarship from the field of international relations theory offers insights that would benefit policy-makers working in the realm of American grand strategy. Bridging the gap between theory and practice in this case can be difficult because much of the specialized academic literature can seem so arcane and “impractical” since it offers no clear-cut blueprint or “hedge of principles” for conducting the optimal grand strategy. Moreover, since there are several schools of thought whose conclusions often seem to be contradictory, strategic thinkers can become bogged down trying to ascertain which theory is the “correct” one. In fact, international relations theory should not be conceived as either true or false, but as providing a way for organizing ideas about the underlying dynamics in international politics. And in this task, each school of international relations theory is equally useful.

The aim of this chapter is to outline the basic tenets of three different schools in international relations that go by the labels realist, liberal institutionalist, and constructivist to show the practical significance of the field’s theoretical ideas. The discussion that follows will attempt to show the linkages and commonalities among the schools and avoid a characterization that paints them as rival interpretations. The discussion also aims to avoid simplistic caricatures of the three approaches under consideration. In this way, we hope to discourage the reader from becoming a committed partisan to any single approach. As a starting point each theory shares the common task of trying to answer the key questions that bedevil policy-makers formulating grand strategy: How can we best shape events to serve our national interests? How will other states respond to our actions? For the United States that began the 21st century commanding a position of hegemony that some critics labeled “hyper-power,” international relations theory has the potential to suggest which courses of action are most likely to yield stability and which are most likely to corrode it.

Realism and the Construction of a Theory of International Relations.

We begin our discussion with the realist school because realist scholars assert their approach has an ancient lineage that can be traced back to ancient Greece. In addition, the realists were the first scholars of international politics to explicitly attempt to move beyond mere description of international politics by creating a theory for their discipline.

The basic precepts of realism are easy to summarize. The emergence of many independent, sovereign states in Europe in the seventeenth century, none of which acknowledged any superior authority, created an anarchical international system. Within such a system there could not be a genuine international society but only a conflict of interest and struggle for survival so that interstate relations were ultimately regulated by warfare. For realists, conditions in the international state system are captured in the metaphor developed by 17th century political philosophers of a “state
of nature.” Further, drawing on models of game theory, realists demonstrate that although states might recognize that cooperation would yield benefits, the very structure of their situation precludes them from cooperation because other states might cheat on agreements and thus jeopardize their security. Expressed in the jargon of game theory, the underlying dynamic of international politics is one where independent decision-making leads to sub-optimal outcomes. Realists claim the validity of their analysis is demonstrated by the fact that its precepts have been identified by classic thinkers even before the emergence of the state system.

An accurate portrayal of the origins of realism must first demolish the cliché myth that realism’s explanatory power is strengthened by the fact that classic thinkers from Thucydides to Machiavelli identified its underlying principles. Proponents of the realist perspective point to the famous passage in the Peloponnesian War where the Athenians tell the Melians:

... since you know as well as we do that, when these matters are discussed by practical people, the standard of justice depends on the equality of power to compel and that in fact the strong do what they have the power to do and the weak accept what they have to accept.4

After the speech, the Athenians go on to kill all Melian men of military age and sell the women and children into slavery. Realists cite this passage and the events that followed to support their claim to represent an understanding of the underlying dynamics of international politics that is universal across time and space and that can hardly be altered by human choice or action. Yet, scholars citing the passage omit the fact that the events Thucydides described took place in the 16th year of the war. Consequently, one cannot assert that Thucydides was stating a basic law of international politics, when he might well be drawing a lesson about the impact of prolonged war on a society. This decidedly “unrealist” reading of Thucydides can also be supported by the fact that the Athenians took quite different actions when they voted to spare the Mytilenians earlier in the same war. Further, one can even interpret Thucydides choice to recount the Athenian decision, taken immediately after the Melian affair, to sail to Sicily where they met with military catastrophe as suggesting a lesson about the consequences of imperial ambition.5

The second classic thinker often called a founding member of realism is, of course, Niccolo Machiavelli. In one sense, Machiavelli’s reputation as a realist is deserved and stems from his rejection of the medieval approach to political philosophy that focused on how men should live, rather than describe how they do live. Further, his book, The Prince, provides the classic expression of realpolitik that has led to the negative connotation of the term “Machiavellian.” However, Machiavelli’s biography suggests that the book was less an effort to ascertain universal principles of political behavior than an effort to salvage his own position. As a Florentine diplomat who served in the republic, Machiavelli lost his position when the Medicis returned to power in 1512. Moreover, Machiavelli was implicated in an anti-Medici plot, imprisoned, and tortured. He wrote The Prince in 1513 in an effort to ingratiate himself to the Medici family—most likely in the hopes of recovering his position. The circumstances under which Machiavelli wrote The Prince shaped its content in a way that detracts from it as an authentic expression of realism.

One can gain a better appreciation of Machiavelli’s genuine political orientation by reading his longer work, Discourses: On the First Ten Books of Titus Livius. This book was written over a 5-year period (1512-1517) and provides a celebration of the virtues of a republican form of government that is absent in The Prince. His political preferences are most apparent when comparing a republican form of government with a monarchy. In one chapter he says:

But as regards prudence and stability, I say that the people are more prudent and stable, and have better judgment than a prince; and it is not without good reason that it is said, “The voice of the people is the voice of God.”
He goes on to add:

For a licentious and mutinous people may easily be brought back to good conduct by the influence and persuasion of a good man, but an evil minded prince is not amenable to such influences, and therefore there is no remedy against him but cold steel.6

Although Machiavelli is not the founder of realism often claimed, the ambiguity in his work is sufficient that one can trace some contributions to both a realist and institutionalist tradition of international relations theory to him.7

To show as we have that realists cannot claim to be the heirs of a long-standing tradition with ancient roots is not intended to discredit that school of thought. Yet realists claim that one great virtue of their approach to understanding international politics lies in its ability to explain continuity in state behavior that is evident from the long history of realist views found in the classic works discussed above. In fact, the realism located in both Thucydides and Machiavelli is at best over-exaggerated and at worst a complete distortion of their ideas. The one classic thinker that realists can claim as a progenitor for their ideas is Thomas Hobbes, who was one of the seventeenth century writers to develop the concept of “state of nature.” In this case, however, we must note that his tract on behalf of absolute monarchy, The Leviathan, containing as it did his pessimistic assessment of human nature, was written against the experience of the English Civil War in which all the characteristics we associate with failed states were in evidence. Therefore, the validity of drawing universal inferences about behavior from such circumstances must certainly be questioned.

Given the tenuous links with classic writers, the best place to begin an elaboration of realism lies in the work of Hans Morgenthau. Aspects of Morgenthau’s biography help explain the content of his ideas, while circumstances of his era help explain why his ideas would resonate with his contemporaries. Hans Morgenthau was born in Germany in 1904. He witnessed the major 20th century traumas of his country: defeat in the first world war, the collapse of the Weimar Republic, and the rise of Adolf Hitler. Morgenthau left Germany for the United States in 1937. Given what he saw as the irrationality of German fascism with its rabid anti-Semitism that shaped its foreign policy, it is not surprising that Morgenthau would contrive to place foreign policy on a more rational foundation. He described that foundation in his classic book, Politics Among Nations, first published in 1948. Needless to say, a book whose purpose was to provide a “rational theory” of international politics found fertile soil in the environment after World War II. That era was marked by a profound disillusionment with inter-war diplomacy whose crusading idealism, symbolized by the League of Nations and the Kellogg-Briand Pact to outlaw war, failed to stop the conflagration that began in 1939. Morgenthau’s ideas proved sufficiently compelling that his book continued to be published long after his death with the latest edition appearing in 2005.

Morgenthau began his analysis with a claim to found a science of international politics based on objective laws of human nature. From this origin he developed his core concept and one of his six principles of realism as “interest defined in terms of power.”8 This core concept served both practical and scholarly functions. For the statesman, the concept provided a yard stick for measuring policy by enabling him to ask: How does this policy affect the power of the nation? For academics, Morgenthau’s stress on the rational element had the virtue of aiding theoretical understanding and could therefore account for “...that astounding continuity in foreign policy which makes American, British, or Russian foreign policy appear as an intelligible, rational continuum, by and large consistent within itself, regardless of the different motives, preferences and intellectual and moral qualities of successive statesmen.”9

By reducing the basic motive for states to “interest defined in terms of power,” Morgenthau simplified the task of understanding the actions of states for both practitioners and scholars alike.
For Morgenthau, his realist view guarded against the fallacy that understanding or anticipating a state’s behavior required knowledge of either its motives or its ideological preferences. The realism of Morgenthau can be summarized as favoring an understanding of state behavior based on calculations of interest and power without reference to morality. As such, Morgenthau’s work became vulnerable to a charge that it was amoral, although that charge cannot really be substantiated. For Morgenthau, prudence is the supreme virtue of politics, and prudence is the necessary precondition for any kind of morality. Almost by definition only a rational, realist foreign policy could be moral to the extent it ensures a moderation that saves states from “moral excess and political folly.” One can appreciate why a refugee from Hitler’s Germany would come to define and value prudence and moderation as the only sound basis for a moral foreign policy.

Morgenthau’s realism is, to be sure, highly pragmatic, and he is critical of statesmen like John Foster Dulles who introduced a crusading moralism as a guiding principle of American foreign policy. Morgenthau was an early critic of the American war in Vietnam and not on legal or moral grounds, but because he believed the war did not serve American interests. Morgenthau’s principles of realism also have the virtue of guarding against the hubris of imperial power—particularly relevant to post-Cold War America—and he noted that the moral aspirations of any particular nation are not synonymous with the moral laws that govern the universe. On this score, the profound moral vision that informs his realism was apparent when he said:

The lighthearted equation between a particular nationalism and the counsels of Providence is morally indefensible, for it is that very sin of pride against which the Greek tragedians and the Biblical prophets have warned rulers and ruled. That equation is also politically pernicious, for it is liable to engender the distortion in judgment which, in the blindness of crusading frenzy, destroys nations and civilizations—in the name of moral principle, ideal or God himself.

Before leaving our discussion of Morgenthau, it is appropriate to point out that for all of his emphasis on the struggle for power as the underlying dynamic force in international politics, and the fact that subsequent realists view him as their intellectual godfather, Morgenthau foreshadowed approaches used by the two other schools of international relations theory. In his discussion of British predominance in the nineteenth century he noted that Britain was able to overcome all serious challenges to its superiority because its self-restraint enabled it to gain allies and minimize the incentive of other powers to challenge it. Such a view suggests that the domestic character and nature of a regime shapes its behavior as much as external circumstances. The view that domestic politics deserves equal causal weight as external conditions—a view rejected by other realists—would be expanded upon subsequently by liberal institutionalists, as we will see below.

Morgenthau also foreshadowed constructivist analysis in both his discussion of the balance of power and of the impact of nationalism. Morgenthau did not conceive of the balance of power as some automatic process or universal behavior, but rather as a process that rested on the moral and political unity of Europe. Translating Morgenthau’s insight into constructivist terminology, we would say that the balance of power is socially constructed by states and therefore has no independent permanent existence external to them. Similarly, Morgenthau noted that states viewed themselves and their very identity quite differently as a result of nationalism, and he denounced the pernicious impact of nationalism on state behavior because it undermines the restraint necessary for moral conduct. He said:

Compromise, the virtue of the old diplomacy, becomes the treason of the new; for the mutual accommodation of conflicting claims, possible or legitimate with a common framework of moral standards, amounts to surrender when the moral standards themselves are the stakes of the conflict.
Morgenthau’s view here is consistent with constructivist claims that socially constructed identities shape behavior of states. We will return to constructivist analysis later in this chapter.

Other realist scholars followed in Morgenthau’s footsteps. Perhaps most notable among them is Kenneth Waltz, whose influential *Theory of International Politics* was published in 1979, the year that Hans Morgenthau died. Waltz came to the study of international politics from economics and drew on the logic of that discipline for his analysis of international politics. Given the logic of micro-economic theory, it is not surprising that Waltz viewed all states as similarly motivated and rational, value-maximizing actors. In fact, the assumption that states apply an economic mode of reasoning pervades the work of other realists as well as the work of liberal institutionalist scholars.

Waltz moved away from Morgenthau’s version of realism in some important ways that earned his work the label of neo-realism. First, Waltz’ theory is more abstract than Morgenthau’s, and he strives to create a theory that is both parsimonious and elegant. The greater level of abstraction is justified by his definition of the function of theory and its distinction from the related concept, “laws.” For Waltz, laws identify invariant or probable associations that can be ascertained as true. Theories on the other hand explain why laws are true. He concludes from this distinction that “A theory though related to the world about which explanations are wanted, always remains distinct from the world.”

Second, unlike Morgenthau, Waltz sees power as a means and not as an end that states pursue. Power provides the means by which states achieve their core interest or objective, which is survival. Third, Waltz emphasizes more strongly than Morgenthau the extent to which state behavior is shaped by external conditions. Waltz asserts that his theory is a “systems” theory because it shows how the organization of units (states) affects their interaction and behavior. Waltz’ focus on systems-level causes means that, for him, impersonal forces shape behavior rather than objective laws of human nature. Thus, Waltz rejects Morgenthau’s pessimistic view of human nature that traced state behavior back to man’s inherent lust for power. The crucial component of the system lies in its structure, anarchy, and the distribution of power in the system. For all practical purposes determining the distribution of power means counting the number of great powers to determine if the system has a multi-polar or a bipolar structure. Waltz’ emphasis on system structure is why the approach is sometimes labeled “structural realism.”

For Waltz, the structure of the international system and power as the means by which states seek to ensure their survival are linked to shaping behavior and outcomes. Unlike Morgenthau who saw the operation of the European balance of power as dependent on a common moral framework, Waltz conceives of the balance of power as an automatic process akin to the law of gravity in the physical sciences. Because all states have the same core interest to survive, they will balance against a greater power because any concentration of power has the potential to threaten their survival. Waltz logically expects then, that balancing behavior means states will tend to join the weaker of two coalitions to check the power of the stronger one. Because the structure of the international system influences the means available to balance power, different structures have different implications for peace and war. Thus, a multi-polar system with many comparable power centers necessarily relies on alliances as the balancing mechanism. Reliance on alliances creates great uncertainty among states as to who actually threatens whom. Uncertainty is also compounded by the fact that a defection from one alliance will completely alter the capability of that alliance and hence jeopardize the survival of its members. Diplomacy within a multi-polar system is fraught with such uncertainty that states easily miscalculate. Pervasive miscalculation, in turn, will make multi-polar systems warlike. Indeed, some historians suggest that during the multipolar system from 1688 to 1939, there were not just two but nine world wars.

In contrast to his expectations concerning a multi-polar system, Waltz expects a bipolar system to be less warlike because the two great powers that dominated the system after 1945 relied on internal
mechanisms to balance each other rather than alliances. For Waltz, such internal balancing is more reliable and precise and does not generate the uncertainty that makes states prone to miscalculation. To be sure, Waltz recognizes that each of the superpowers in the bipolar system created alliances, but these did not serve to balance power between the two alliance leaders. Rather, the alliances provided the weaker members a guarantee of protection. Furthermore, because the discrepancy in power between the superpowers and the states within their respective alliances was so great, any realignment through defection of one state to the other side would not be destabilizing. Thus, Waltz notes that both the United States and the Soviet Union experienced the loss of China to the other side, yet the loss was easily tolerated and did not prompt war because it did not fundamentally alter the balance between the two superpowers.19

Several observations about Waltz' analysis should be noted at this point. First, in *Theory of International Politics*, Waltz categorically puts the causal force shaping state behavior and therefore foreign policy on external factors. One does not need to know about the domestic political system or culture of a state or the character of its national leaders to infer general expectations about its behavior. Quite different states can be expected to respond in the same way to the same external structural conditions. Couched in social science terminology, the structure of the international system acts as an intervening variable between an actor’s purpose and the outcome he achieves. The way the international system shapes or disciplines the behavior of states is illustrated by the famous example of Leon Trotsky. Appointed as the first Soviet Commissar for foreign relations, Trotsky believed the new Bolshevik government would be able to pursue a new revolutionary foreign policy without reference to the international system. He expected that as foreign minister he would “issue some revolutionary proclamations to the peoples and then close up the joint.”20 Of course, Trotsky was mistaken about his ability to ignore the realities of the international system. As further supporting evidence for the influence of structure on behavior, Waltz notes that for the two world wars of the 20th century, the same principal countries lined up against each other despite the domestic political upheavals and the changes in leadership that occurred during the interwar period.21

Yet if Waltz’ claim that the underlying dynamic of international politics is unchanging, and state-level factors cannot transform the system, then one must conclude logically that if the Axis powers had won World War II and a bipolar structure organized around the leadership of Germany and Japan had emerged, conditions in international politics would not have evolved much differently. Similarly, a Soviet victory in the Cold War would not be expected to have transformed the system in any meaningful way. These counterfactual examples are suggestive of the limits to an understanding of international politics that places the greatest causal weight on the external environment. Waltz himself moved away from that extreme view and admitted in a later article that “The causes of war lie not simply in states or in the state system; they are found in both.”22

A second observation needs to be made concerning Waltz’ claim about the greater peacefulness of the bipolar system that emerged in 1945. He asserts that the peacefulness was the result of the internal balancing mechanism that made the superpowers less prone to miscalculate. Yet nuclear weapons came into existence at the same time as the bipolar structure. Consequently, one cannot ascertain for sure whether the absence of war between the superpowers was the result of the change in military technology or the bipolar structure. Finally, from the standpoint of practical policy-making, Waltz’ theory has the drawback of working at such a level of generality—and one he readily admits—that statesmen are unlikely to be able to use it to evaluate courses of action.23 However, Waltz does provide a very practical warning about the hazard of overextension that is inherent in the excessive concentration of power found in a unipolar structure. Waltz believes such a structure is not likely to be durable because a country leading a unipolar structure will be tempted
to misuse the concentration of power it enjoys, so that “... even if a dominant power behaves with moderation, restraint, and forbearance, weaker states will worry about its future behavior.”

The Liberal Institutionalist Response.

Although realist scholars assert the persistence and dominance of their approach to understanding international politics, an alternative view that questions the basic tenets of realism has wide appeal. The alternative view starts with a different sense of the “state of nature” metaphor—one that is derived from John Locke rather than Thomas Hobbes. Locke, who was a contemporary of Hobbes, believed that the absence of government authority created a state of nature that was a state of liberty, but was not a state of license leading to conflict and war. Consequently, cooperation and order are feasible even in the absence of preponderant power, and the liberal institutionalist school focuses on the many factors that contribute to expanding opportunities for collaboration among states. For liberal scholars the era of total war begun by Napoleon and continuing with the two world wars of the 20th century demonstrated the growing dysfunction of the costs of great power rivalry that undermine the very ability of great powers to secure their interests. Thus, liberal scholars assert that a transformation in international politics occurred that created regions where war is virtually obsolete. These zones of peace, exemplified by the creation of the European Union, is testament to the fact that the anarchy induced competition can be overcome.

The coexistence of realist and liberal theory is illustrated by the ebb and flow of diplomatic practice that draws on the assumptions of one or the other school of thought. The notion that acceptable diplomatic practice must be based on self-interest embodied in raison d’état was unquestioned by leaders until the end of World War I. That war had a sobering effect on statesmen who realized that total war among the advanced industrial states was catastrophic. This led to a wholesale rejection of realist statecraft and acceptance of a new liberal practice. The liberal practice sought to replace balance of power considerations with collective security and to regulate interstate relations on the basis of open diplomacy and law. The failure of such liberal statecraft to avert the Second World War seemed at the time to invalidate liberal principles and practice and reestablish the eternal verities of realism. E. H. Carr was a predominant spokesman who sought to critique the legalist-moralistic diplomacy of the interwar period in his book, The Twenty-Year’s Crisis. In the end, Carr recognized that the pursuit of power by itself could not provide a firm foundation for international order and that any political order must rest on the twin pillars of power and legitimacy. He wrote:

> If, however, it is utopian to ignore the element of power, it is an unreal kind of realism which ignores the element of morality in any world order. Just as within the state every government though it needs power as a basis of its authority, also needs the moral basis of the consent of the governed, so an international order cannot be based on power alone, for the simple reason that mankind will in the long run always revolt against naked power.

Beginning in the 1970s a new generation of scholars sought to pick up where E. H. Carr’s conclusion ended to suggest that the liberal statecraft of the interwar period had not been wrong but merely premature. This new response to realism was launched by Robert O. Keohane and Joseph S. Nye’s edited volume, Transnational Relations and World Politics in 1970. Other works followed including Edward L. Morse, Modernization and the Transformation of International Relations which appeared in 1976. What these and other works shared in common was a recognition that profound changes had occurred during the past two hundred years so that state behavior could not be expected to resemble that of the European states in the 18th century. In some sense these early works reflecting liberal institutionalist views foreshadow analysis of the impact of globalization.
Although states still pursue survival as an objective, that survival is more broadly defined to include satisfying the demands of the people and ensuring prosperity. Given the fact that states have broadened their goals, they need to move away from reliance on military force and power with its drive for competitive unilateral advantage toward greater cooperation. Furthermore, the search for security increasingly takes place in an environment where borders have been made more porous by changes in technology and growing interdependence. Interdependence in turn makes a strategy that relies on unilateral drives for advantage self-defeating. It is important to underscore the point that liberal theorists do not believe that states have somehow acquired new ethics that value cooperation, but that the changes wrought by technology make it impossible for them to achieve their selfish objectives without cooperation.

Liberal institutionalists share the realist assumption that states are rational actors engaged in a continuing cost-benefit analysis, so they carry over the realist notion that states apply an economic mode of reasoning. Hence, liberal institutionalists reconfirm the realist assumption that state behavior is not significantly affected by cultural variation. However, as part of that actor rationality, liberal scholars believe states to be willing to forgo competition on behalf of greater gain, as long as they can eliminate the fear that other states might cheat on their agreements. International institutions are the means for minimizing fear and hence the reason that the school carries the label “institutionalist.” In addition, this liberal strand of theory shifts the causal weight for behavior away from the external conditions or structure toward the importance of domestic political institutions. Thus, liberalist scholars assert that the gradual spread of democratic governance provides states with added incentive to pursue objectives beyond a narrowly defined physical security. An additional theoretical corollary that grows from the observation of the impact that democracy has for international relations is the so-called democratic peace theory that asserts that democracies are less inclined to go to war against other democracies than they are against authoritarian states.

Realists often accuse scholars writing in the liberal institutionalist tradition of paying insufficient attention to the role of power in international politics. This charge cannot really be substantiated, and we can illustrate this by looking at how liberalist scholars address the quintessentially realist phenomenon of war. In the discussion that follows we will look at liberal analysis of both the initiation of war and the nature of peace settlements that follow major wars. In each instance, liberal institutionalists draw implicitly on Morgenthau’s insight concerning the British restraint in the exercise of power in the nineteenth century that we noted earlier.

Power transition theory provides a conceptual framework for understanding the factors that contribute to the start of war. The book, *The War Ledger* by A. F. K. Organski and Jacek Kugler, outlines a model of power transition and explains its implications. As its name suggests, changes in the distribution of power play an important causal role in the initiation of war. Changes in power are driven by internal growth, and here power transition theory relies heavily on changes in gross domestic product (GDP) as a measurement. Changes in growth lead to a dynamic process of rise and decline in the power of states. From a strictly realist perspective, one would expect a dominant country to try to inhibit the growth of another state’s power. Similarly, one would expect the rising country to challenge the interests of the dominant country until the tension between the two countries becomes so great that war ensues. But changes in power are only one factor that accounts for the outbreak of war, and power transition theory is not purely realist.

The second factor that power transition theory identifies as contributing to the onset of war relates to the evaluation of the status quo. That status quo is composed of institutions, laws, and practices that govern state interactions and allocate rewards and punishments. As such, the specifics of the status quo arrangements reflect the preferences and interests of the dominant country. But it is how others, especially rising challengers, view the status quo that determines whether or not war breaks
out between a challenger and the dominant country. In other words, as E. H. Carr recognized, both power and legitimacy matter in terms of maintaining or breaking the peace.

Applying both variables to the Soviet-American rivalry during the Cold War illustrates the impact that power transition theory attributes to the interaction of power parity with satisfaction/dissatisfaction of the status quo. The Soviet Union was very dissatisfied with the status quo established by the United States at the end of World War II, which included among other things the Bretton Woods system designed to foster economic openness. Yet, the Soviet Union came no where near matching the U.S. from the standpoint of power—particularly as measured by GDP. Consequently, no war occurred between the rising Soviet challenger and the dominant United States. One might speculate concerning the likelihood of war between the United States and China as being similarly dependent on whether or not China will reach power parity with the U.S. and become dissatisfied with the status quo.

The book that is most useful for understanding the nature of an acceptable status quo is G. John Ikenberry’s After Victory: Institutions, Strategic Restraint, and the Rebuilding of Order After Major Wars. This work focuses on the origin of the status quo found in the peace settlements that conclude major wars. Like power transition theory, Ikenberry recognizes the indispensable role that power plays in establishing a status quo, for it is the victor in a major war that shapes the postwar world. From this position of power a state can choose to exercise its raw power and dominate others, or use its position to create a durable order. Realists and institutionalists differ in what they see as the likely choice of a dominant power. Ikenberry captures the two views when he notes:

The debate about the sources of international order is typically waged between those who stress the importance of power and those who stress the importance of institutions and ideas. This is a false dichotomy. State power and its disparities determine the basic dilemmas that states face in the creation and maintenance of order, but variations in the “solutions” that states have found to these dilemmas require additional theorizing. The character and stability of postwar order hinge on the capacities of states to develop institutional mechanisms to restrain power and establish binding commitments—capacities that stem from the political character of states and prevailing strategic thinking about the sources of international order.

The cases Ikenberry examines show how, beginning in 1815, the leading state resorted to an institutional strategy and how subsequent peace settlements varied from the first one. In part, the variation in the institutional arrangements created by the peace settlement shows that the greater the power disparity after the war, the greater the capacity of the leading state to adopt an institutional strategy.

Unlike other liberal institutionalist theorists who see the value of institutions in the extent to which they provide a mechanism that guards against cheating, Ikenberry sees institutions as transforming the very condition of anarchy to the point where it bears some resemblance to a “constitutional order.” He defines a constitutional order as one organized around agreed upon legal and political institutions that because they allocate rights and limit the exercise of power, make that concentrated power less consequential. Ikenberry’s view of anarchy then, is quite the opposite of the realists who see anarchy as an absolute. For Ikenberry, institutions can lead international politics to resemble domestic politics more closely. Institutions can do this because both the dominant state and weaker ones have a stake in the arrangement. Institutions give weaker states a voice and ensure against their exploitation by the strong. The dominant state has an incentive to conserve its power by committing to an arrangement that explicitly limits its own exercise of power. By so doing, the dominant state acquires acceptance by the weaker states, which lowers the enforcement costs to the dominant state for maintaining the order. By limiting the expense of maintaining international order, the dominant state minimizes the corrosive effect that imperial costs might otherwise impose. Ikenberry describes the dynamic behind the bargain this way:
... the leading state gets a predictable and legitimate order based on agreed-upon rules and institutions. It obtains the acquiescence in this order by weaker states, which in turn allows it to conserve its power. In return, the leading state agrees to limits on its own actions and to open itself up to a political process in which the weaker states can actively press their interests upon the more powerful state. ... Institutions play a two-sided role: they must bind the leading state when it is initially stronger and the subordinate states later when they are stronger.30

Ikenberry recognizes that nations will not under all circumstances select the solution to order that relies on institutions, and that democracies are better suited to use this strategy than nondemocracies. Several reasons account for the relative ease that democracies have in establishing an institutional order. First, democracies have a higher level of political transparency and openness. Such transparency means that other states will be fully aware of their actions and the motives behind them. Part of the transparency involves political competition inherent in democratic processes that makes leaders accountable to an electorate. Related to transparency and political competition is the fact that decision-making is decentralized, which offers the opportunity for many actors (including other states) to influence policy. Finally, Ikenberry notes that democracies can be characterized by “policy viscosity,” which means there are institutional checks on abrupt policy shifts that reduce destabilizing surprises.31 In essence, Ikenberry moves beyond the thesis of a democratic peace to suggest that democracies—especially great powers in a position to establish world order—have foreign policy options that are not as available to nondemocracies. Thus, using our counter factual scenario about what would have happened if the Axis powers had won World War II, Ikenberry’s answer is quite a departure from what the realists like Waltz might say. The logic of Ikenberry’s analysis suggests that the Axis powers would have been less able to select an institutional strategy to lock in their power position and would have faced persistent, simmering resistance from other states.

Constructivists and the Social-Psychology of International Politics.

Of all the approaches to international relations theory, perhaps the most difficult to summarize briefly is constructivism. Constructivism is the most recent school and its relative newness means that its precepts have not yet seeped into diplomatic practice, nor has its terminology entered public debate. Further, constructivism departs significantly from the other two schools, particularly in its rejection of the assumption that states use an economic mode of reasoning. In addition, of the three approaches, constructivism is most easily misrepresented because it rejects the crudely materialist view that the physical reality of the environment governs state behavior. Consequently, constructivists are often labeled idealists. In one sense, this is an unfortunate label because idealism conjures up notions of impractical, naïve and unrealistic views of the world. However, in another more philosophic sense, the label idealist is appropriate because constructivists focus on more intangible factors like the impact of ideas on state behavior. Thus the starting point for constructivist analysis is to consider facets of culture like norms and ideas as well as processes of social interaction as the best avenue for understanding state behavior. One way constructivists illustrate the weakness of a purely material explanation for state behavior is to consider U.S. relations with two neighbors, Cuba and Canada. From the standpoint of power, the two stand in comparable positions in relation to the U.S. Yet power is an insufficient explanation of U.S. behavior toward each.32

Alexander Wendt is one leading scholar who draws on a constructivist approach, which he outlines in his book, Social Theory of International Politics. Indeed, his work is sufficiently notable that a journal devoted to international security found it worthy as a subject of a major review essay. As
A fundamental principle of constructivist social theory is that people act toward objects, including other actors, on the basis of the meanings that the objects have for them. States act differently toward enemies than they do toward friends because enemies are threatening and friends are not.33

Given such a principle, constructivists would never accept the fact that any given condition in international politics like anarchy (or balance of power) has an effect on state behavior that is universal across time and space. There is in other words, no inherent logic to anarchy, it is, as one author phrased it, an “empty vessel.”34 That empty vessel may be filled in various ways depending on social interaction of the states and the knowledge they gain concerning anarchy from this interaction. For example, Wendt describes three possible meanings for anarchy that he labels: competitive, individualistic and cooperative. The first two forms of anarchy fit the classic realist conception of international politics in that they are self-help systems where states do not positively identify their security with that of others. For Wendt, there is a possible third meaning for anarchy that is cooperative because states see their security as linked to the security of others.35 Realists would claim that the competitive meaning for anarchy is the only possible one, while Wendt would suggest that although it happens that our system of international politics accepts the competitive meaning for anarchy, there is nothing inevitable about this acceptance. Rather, as Wendt would have it, the meaning of anarchy was socially constructed and emerged as a result of past practice—so changes in practice can be expected to yield changes in the understanding of anarchy that will lead to changes in behavior. Indeed some scholars suggest that changes may already be taking place, and here changes in inter-subjective knowledge is viewed as prompting adoption of institutional strategies:

To a large extent, the sovereigns have tamed themselves through the construction of international institutions. They have done so only imperfectly but the trajectories are in the direction of increased peaceful coexistence between political communities. For most states most of the time, sovereignty and peace are compatible. Hobbes and Rousseau predicted permanent insecurity and war as the predominant consequence of sovereignty. Institutional development since they wrote has proved them wrong.36

The impact that social construction has on state behavior suggested above can be likened to the formulation of customary international law. Customary international law establishes legal norms and obligations through state practices. States are expected to carry out their obligations consistent with past accepted conduct so that customary international law is as binding on states as treaty law. The notion that world politics is socially constructed in a manner similar to customary international law is not intended to suggest that world politics is so malleable that human choice and free will have unlimited options because any social construction and the inter-subjective meanings that emerge from them will take on a self-perpetuating quality creating path dependencies difficult for new ideas or social interactions to transcend.37 The fact that social construction of new meanings may take time and be difficult does not mean the process does not occur. For example, the meaning that people of the West give to war today is quite different from the view in 1914 when, under the impact of Social Darwinist ideas, people viewed war as a means to re-invigorate society.38

Two more aspects of the constructivist approach are important for understanding the underlying dynamics of international politics: identity and interests. The constructivist view of these two elements is a stark contrast to that held by the other two schools. Neither realists or liberals examine the origins of state identities or interests. Realists in particular see interests and identities as “unvarying and a-contextual.”39 Liberal institutionalist scholars are closer to constructivists on the issue of the impact of ideas and norms on international politics; however, they focus on the
consequences of ideas and are less concerned about their origin. For constructivists, state identities are inherently relational and thus dependent on social construction, for how can one state view another as a friend or foe a priori, without some previous interaction? Constructivists adopt the term identity from social psychology where it refers to “images of individuality and distinctiveness” held and projected by an actor and formed through relations with others. As conventionally used, therefore, the term refers to mutually constructed and evolving images of self and others.40

For constructivists, identities serve as a crucial link between the external world and interests. Therefore, interests are not predetermined, nor are they permanent, Lord Palmerston’s assertion about British interests notwithstanding. Rather, interests emerge from social practice and depend on the state’s sense of identity. One scholar stated the point this way: “Actors often cannot decide what their interests are until they know what they are representing — ‘who they are’ — which in turn depends on their social relationships.”41 Constructivists do not take national interests for granted, but seek instead to locate their source.

Germany and Japan provide excellent cases for illustrating the way constructivists see identity as affecting national interest.42 Both countries exhibited a xenophobic nationalism that culminated in their policies of conquest during World War II. The devastation they suffered during the war and their unconditional surrender goes a long way toward explaining their anti-militarist policies after 1945. Certainly the adoption of anti-militarist policies is consistent with a realist understanding of state behavior. However well realist understanding may account for the origin of anti-militarism in Japan and Germany, they are not able to account for the persistence of the trend at the end of the Cold War, which enlarged German and Japanese power and opened up greater latitude for maneuver. Moreover, although a liberalist view might attribute the continued anti-militarism to the spread of democracy or growing interdependence, liberalists are less able to explain why feelings of anti-militarism run deeper in Japan and Germany — as was evident by their policies during the first Gulf War — than in Britain or France.

Thomas Berger believes that a constructivist understanding about the way identity shapes interests is useful for understanding the persistence of anti-militarism in Japan and Germany. One indicator of that anti-militarism is the extent to which each country has sought to assert civilian control of the military, albeit using different methods. Berger draws on survey data to show the increasing consensus for anti-militarist policies after the 1950s. Commitment to such policies as the means for pursing national interests can only be understood by the changing sense of national identity in each country. For Japan, that identity was defined in terms of economic expansion as a trading state. For Germany that sense of identity was defined as part of a larger European community bound together by common values and interests. So deep was the German redefinition of its identity — what one journalist described as a “deeply internalized ethics of repentance for World War II”43 — that once re-unification was achieved, Germany further reduced its sovereignty by accelerating European integration through the Maastrict Treaty. Acceptance of Maastrict required Germany to make economic concessions that amounted to an abandonment of major sources of power and influence in a way that neither realism nor liberalism explain. To be sure, changes in German and Japanese identity is part of a broader trend concerning notions about governance that are part of a post-modern politics focusing greater emphasis on welfare than traditional conceptions of national security. Berger goes on to conclude:

. . . Germany’s decision to integrate itself into the West, and Japan’s determination to stay aloof from regional security affairs were logical responses to the particular external pressures that the two countries experienced. Once made, however, these decisions were tied to the new national identities by the German and Japanese governments, which had to justify their policies to their highly critical public. In this way policies were invested with a symbolic value that linked them to the core values. . . 44
Conclusion: Toward a Grand Strategy of Hegemony.

If international relations theory really does offer a framework for organizing ideas about world politics as asserted at the start of this chapter, where does our review of the three approaches leave us as we contemplate American grand strategy? Interestingly, despite the differences among the schools, they tend to point in similar directions for a grand strategy for “the sole remaining superpower.” All three schools see the excessive concentration of power achieved by the United States after the Cold War as problematic or at least potentially so. What follows is an attempt to apply the logic of each strand of theory to the reality of American hegemony in order to avoid the pitfall of wishful thinking that has been so damaging to policy in the past.

Realists, with their assertion of the centrality of power—whether as a means or an end—for understanding the dynamics of international politics view American hegemony with apprehension. Although on this point there is some divergence between the views of Morgenthau and Waltz, Morgenthau’s belief that all states seek power as their primary goal would seemingly be more pleased with the power accumulated by the U.S. Nevertheless, Morgenthau would likely question the equation of American values with universal ones articulated in the latest National Security Strategy published in March 2006. That document, which declares the American objective to be “ending tyranny in our world,” would likely be viewed by Morgenthau as the kind of excessive crusading that comes when a nation abandons the pursuit of “interest defined in terms of power” for absolutist goals. Such messianic zeal necessarily abandons the prudence that Morgenthau believed crucial for a realist foreign policy. Morgenthau would see in the latest national security document the same kind of moralism he found such an anathema in John Foster Dulles’ Cold War diplomacy.

Waltz, writing after the Cold War and in response to conditions created in its aftermath sees the United States as responding to structural imperatives and behaving “as unchecked powers have usually done.” Moreover, Waltz predicted that the extension of NATO was likely to make Russia feel surrounded and isolated, which would propel them into closer alignment with China. Indeed, there is some evidence that this alignment is occurring. Russia and China held their most ambitious joint military exercise in 2005, which is quite the departure from the shooting across their common border that occurred in 1967. In addition, Vladimir Putin has made several recent remarks about the danger to world order emanating from concentrated U.S. power that offer further evidence of the automatic balancing process identified by Waltz.

While realist views tend to suggest a certain inevitability to the emergence of an anti-American coalition, liberal institutionalists and constructivists are not so fatalistic in their assessment. Whether from the perspective of power transition theory or Ikenberry’s view of peace settlements, liberal scholars see the United States as able to shape the response of other states to the status quo. One key for shaping that response that might preclude the formation of a Sino-Russian condominium would be for the U.S. to exercise some self-imposed restraints on its power. There are several specific institutional mechanisms that would enable the U.S. to demonstrate self-restraint. The United States could bind itself by joining the International Criminal Court or taking the lead on the Kyoto Protocol. The U.S. might also renounce the unilateralism implied by the doctrine of preemptive war promulgated in the National Security Strategy of 2002 and re-commit to reliance on the United Nations to sanction the use of force. All of these actions would lend legitimacy to the status quo by showing other states that the strongest among them agreed to be bound by the same rule of law. In the absence of pursuing an institutional strategy as Ikenberry notes, “... the more that power peaks out from behind these institutions, the more that power will provoke reaction.” Once that reaction is provoked, the U.S. stands to lose more than it does by exercising self-restraint.
Finally, because the constructivists locate the source of national interests in a nation’s identity, the way the United States views itself may well determine its ability to pursue the kind of institutional strategy recommended by Ikenberry. There is some evidence that the United States is moving increasingly in the direction of an imperial definition of its identity. That emerging identity can be gleaned in the statement of former Secretary of State Madeleine Albright when she declared: “If we have to use force, it is because we are the indispensable nation. We stand tall. We see further into the future.” The elaboration of that imperial destiny is fully articulated in the latest national security strategy. American identity framed in imperial terms will lead to its definition of interests that shape how other states will respond to it, for as Wendt observes, how power affects state calculations “depends on the inter-subjective understandings and expectations, on the ‘distribution of knowledge,’ that constitutes their conception of self and others.”

In the end, all three schools of theory converge on conclusions concerning hegemony. American leaders would do well to heed the observation of Edmund Burke in 1793 when Great Britain stood at the brink of its power:

> Among precautions against ambition, it may not be amiss to take one precaution against our own. I must fairly say, I dread our own power and our own ambition; I dread our being too much dreaded...we may say that we shall not abuse this astonishing and hitherto unheard-of power. But every other nation will think we shall abuse it. It is impossible but that, sooner or later, this state of things must produce a combination against us which may end in our ruin.

ENDNOTES - CHAPTER 10

2. This chapter follows the classification used in American scholarship. For an alternative classification more typical of European scholarship, see Martin Wight, *International Theory: The Three Traditions*, London: Leicester University Press, 1994. The primary difference between European and American scholarship is that the former draws heavily on classical political philosophy as its foundation while the latter draws on social science. Consequently, European scholarship tends to emphasize the normative implications of various theories while American scholarship tends implicitly to focus on the policy implications of international relations theory. Within each strand of American theory there are various sub-groupings, some of which use other labels to describe their work. For sake of clarity, we will confine our discussion to the three main groups and retain one set of labels for each. I have selected particular scholars to represent each school because I believe their work provides the best example of each.

9. Ibid., p. 6.

10. Ibid., p. 11.

13. Ibid., pp. 163, 221.

14. Ibid., p. 256. Henry Kissinger, a scholar and practitioner of a realist persuasion, echoes Morgenthau’s views and broadens them to apply to a foreign policy motivated by any ideology. Thus, he was critical of American containment policy as expressed in NSC-68 because it equated vital interests with moral principles. See Henry Kissinger, Diplomacy, New York: Simon and Schuster, 1994, p. 462.

16. Ibid., pp. 5, 6.

17. The fact that Waltz rejects human nature as a causal force may well be one reason that American scholars found his version of realism preferable to Morgenthau’s, whose pessimistic view of human nature runs counter to the pervasive liberalism in American scholarship. See Keith L. Shimko, “Realism, Neorealism, and American Liberalism,” The Review of Politics 54, Spring 1992, pp. 281-301.

20. Ibid., p. 128.

21. Ibid., p. 66.

23. Waltz, Theory of International Politics, p. 118. Waltz emphasizes that the requirements of a theory of international politics are different from the requirements for a theory of foreign policy. Therefore, the criticism that balance of power theory fails to explain particular policies is no more valid than to expect the theory of universal gravitation to explain the wayward path of a falling leaf, p. 121. Waltz would also challenge liberal and constructivist analysis on the grounds that what they really seek is a theory of foreign policy, not a theory of international politics. Morgenthau makes a similar point when he notes that realism’s presentation of a theoretical construct of rational foreign policy will never be achieved completely in practice. Morgenthau, Politics Among Nations, p. 8.

30. *Ibid.*, p. 57. Ikenberry goes on to underscore a point based on the logic of path dependence: once institutions are in place, the sunk costs make creating new arrangements prohibitively high. This factor means institutions are likely to remain even though the power distribution that gave rise to them no longer exists.

32. Ronald L. Jepperson, Alexander Wendt and Peter J. Katzenstein, “Norms, Identity and Culture in National Security,” in *The Culture of National Security: Norms and Identity in World Politics*, Peter J. Katzenstein, ed., New York: Columbia University Press, 1996, p. 34. All the essays in this volume apply a constructivist understanding to international politics and to the national security policies of specific countries. The focus on particular national security policies means the authors are less concerned with a theory of international politics and more concerned with theorizing about foreign policy.

CHAPTER 11
MULTILATERALISM AND UNILATERALISM

James A. Helis

Our best hope for safety in such times, as in difficult times past, is in American strength and will—the strength and will to lead a unipolar world, unashamedly laying down the rules of world order and being prepared to enforce them.¹

Charles Krauthammer

The paradox of American power at the end of this millennium is that it is too great to be challenged by any other state, yet not great enough to solve problems such as global terrorism and nuclear proliferation. America needs the help and respect of other nations.²

Sebastian Mallaby

At the beginning of the 21st century, the United States enjoys a historically unprecedented accumulation of national power. The American economy is the largest in the world and even in a slowdown far outstrips that of any other nation.³ The prowess of America’s armed forces has been demonstrated again and again, from Kosovo to Afghanistan to Iraq. In 2002, the United States accounted for 43 percent of the world’s military spending, more than the total of the next 14 countries put together.⁴ Projected increases in American military spending will likely lead to the United States spending more on defense than the rest of the world combined, and the training and technological superiority of America’s armed forces provide a quantum advantage that no nation is likely to even approach in the near to medium term. The combination of overwhelming economic and military power gives the United States enormous political influence throughout the world. There are few, if any, global issues that can be addressed or resolved without U.S. support and cooperation.

One central debate in U.S. foreign policy has been the degree to which the United States should be involved in the affairs of the world. World War II and the Cold War seemed to settle the question of isolationism or engagement in favor of the latter. After the Cold War, the issue of isolationism rose again, but only briefly. The real post-Cold War debate was and remains over the degree to which the United States should pursue its foreign policy alone or in partnership with other states. The debate has been framed in terms of multilateralism versus unilateralism and is heavily influenced by competing views on what the United States should do with its position of preeminent international power and influence. In one sense, “the differences [between the two views] are a matter of degree, and there are few pure unilateralists or multilateralists.”⁵ However, there are clear differences between the two schools of thought on when and to what extent the United States should work with others. We should keep in mind that unilateralism and multilateralism are not strategies. Strategy is about matching ends, means and ways. Unilateralism and multilateralism are competing ways to approach problems. This chapter will examine the advantages and disadvantages offered by each approach. The goal is to identify those conditions under which it is better to work with others through coalitions and alliances and when it is might be best go it alone.

Unilateralism.

People who advocate unilateralism tend to believe that the post-Cold War world is unpredictable and dangerous. They believe America must use its power to protect, and in many cases propagate,
its interests and values. America no longer need constrain itself in the assertion and expansion of its influence out of fear of provoking a confrontation with the Soviet Union. The end of the Cold War stand-off with its threat of nuclear war created an opportunity for the United States to apply its overwhelming military, economic and political power to build an international order that will perpetuate America’s preeminent position in the world.

Unilateralists contend that an assertive approach to foreign policy is justified on both pragmatic and ideological grounds. Charles Krauthammer concisely summarizes the unilateralist philosophy: “The essence of unilateralism is that we do not allow others, no matter how well-meaning, to deter us from pursuing the fundamental security interests of the United States and the free world.”

In other words, as a practical matter, the United States should not compromise when pursuing national security interests. The terrorist attacks of September 11, 2001 and America’s subsequent pursuit of a global war on terrorism strengthened the belief that the U.S. was vulnerable to threats and needed to act aggressively to defeat those threats, irrespective of how the strategy played on the global stage. Ideologically, unilateralists argue that American values and ideals are essentially universal. Policies and actions intended to advance them are in the interest of not only the United States but people throughout the world. The 2002 National Security Strategy states that “the United States must defend liberty and justice because these principles are right and true for all people everywhere. . . . America must stand firmly for the nonnegotiable demands of human dignity.”

The non-negotiability of interests and values calls for their uncompromising pursuit, preferably with the support of others, but alone if necessary. The United States, with its overwhelming aggregation of national power, can be a decisive player anywhere in the world on virtually any issue it desires. “It is hard for the world to ignore or work around the United States regardless of the issue—trade, finance, security, proliferation or the environment.” The United States should not squander its position and capabilities by compromising and diluting its objectives in order to attract allies and partners. If the cause is right and just, the United States should pursue it without compromise. Others states can either accept America’s arguments and follow her lead or be left behind as the United States does what it should and must to advance its interests and values.

One of the main advantages of unilateral approaches to problems is that they provide maximum freedom of action. While allies and partners can bring extra capabilities to the table, they often bring constraints on how their tools can be used. Those who contribute to an enterprise normally expect to have a say in how it will operate. A common problem in United Nations military operations in the 1990s was the “phone home syndrome,” under which commanders of forces assigned to United Nations operations had to seek approval from authorities in their home capital before accepting orders from the coalition commander. Unilateralists also point to the limitations that the NATO allies placed on air operations during the Kosovo campaign as an example of how multilateral approaches can be inefficient and reduce the effectiveness of American capabilities by restricting how they will be used. Because foreign militaries cannot approximate American capabilities, their military contributions are seldom worth the inevitable constraints they add.

Multilateralism.

Multilateralists acknowledge that there are circumstances in which the United States should not rule out acting unilaterally, particularly when “vital survival interests” are at stake. On the other hand, multilateralists argue that most important issues facing the United States in the 21st century are not amenable to unilateral solutions. Transnational issues requiring multilateral approaches include terrorism; the proliferation of nuclear, chemical and biological weapons; illegal drugs; and organized crime. Globalization has made management of international trade and finance even more
important, as economic crises are susceptible to contagion that can have global impact, as was seen in the Asian financial crisis of 1997. And environmental and health problems, to include the spread of infectious diseases, can only be dealt with on a global basis.\textsuperscript{10}

The reality is that American power, while overwhelmingly superior to that of any other state or present coalition of states, is not unlimited. Allies and coalition partners allow the consolidation and pooling of capabilities. A group of nations can almost always bring more tools of power to bear against a problem than one state can alone. While the NATO allies did place constraints on air operations over Yugoslavia, they provided the majority of the peacekeeping forces deployed to Kosovo following the air campaign. The price of their participation in post-conflict operations was a say over how the war was fought. While air planners may have chafed under the politically imposed limitations on their freedom of action, those limits were seen as an acceptable price to pay for cooperation in the peacekeeping effort. The United States certainly had the capacity to conduct the air campaign itself (in fact, the overwhelming majority of missions were flown by American aircraft). However, it was not in the interests of the United States to be the sole or main provider of ground troops for what was bound to be a protracted peacekeeping mission that would follow the air campaign. Going it alone may offer short-term efficiency, but sometimes long-term interests call for multilateral approaches and making concessions in order to have committed partners. And measuring allies’ worth only in terms of their military capabilities ignores the importance of their political and diplomatic contributions.

Multilateralists agree that the United States should seek to protect and extend its status as the soul superpower. However, they believe that exercising power unilaterally could actually be counterproductive. Historically, dominant powers have faced efforts by other states to counterbalance their accumulation of power. “Balance of power theory makes a clear prediction: weaker states will resist and balance against the predominant state.”\textsuperscript{11} For the United States to maintain its position in the international system, it should endeavor to secure the cooperation of other states in addressing global problems. Such a cooperative approach might negate or lessen any perceived need to counterbalance U.S. power. Multilateralists reflect a liberal institutionalist point of view in arguing that it is easier to gain the support and cooperation of others by working within a system of norms, rules, and institutions that assure others of America’s intention to act in good faith as a partner, not a hegemon. While unilateralists contend that the United States should use its power to impose an international order favorable to maintaining America’s long-term supremacy, multilateralists counter that eventually that approach will generate resistance and backlash. A system developed through cooperation is more likely to stand the test of time. Given America’s predominance of power, it would take a remarkable effort and investment of resources for any state or group of states to challenge America’s position. If America behaves as a cooperative member of the international community and does not create the impression that it threatens international stability, there is no reason for other states to seek to balance against American power. No one doubts American capabilities. What America does with its capabilities will determine how others will react and if America’s position will be accepted or challenged.

**Alone or with Others?**

The rhetoric in the dispute between multilateralist and unilateralist approaches obscures that there are few foreign policy decisions that are purely one or the other. Advocates for both positions agree that it is better to have allies in support of a cause than to go it alone. They disagree over what the U.S. should be willing to give up to recruit partners. Unilateralists favor staking out one’s position and moving forward with whomever is willing to go along. Multilateralists favor rallying other
nations to our cause and are more willing to accept trade-offs in building coalitions. Unilateralists and multilateralists agree that there is little room for compromise on such fundamental issues as survival interests. Time constraints may also limit the ability of the United States to drum up allies. Threats that are immediate and pose a serious threat to survival or vital interests may force the hand of the United States.

Finally, both unilateralists and multilateralists agree that the United States should seek to build an international order that will favor the expansion of American values and help preserve America’s dominant position in the world. The United States has a unique opportunity to establish international rules and standards that protect American interests. They differ on how the United States should attempt to build that order. Unilateralists tend to favor more assertive, even coercive approaches. They fall more into the realist school of international relations theory and argue that ultimately power is what matters and reliance on agreements or treaties in lieu of real power is dangerous. On the other hand, multilateralists favor moving ahead in a framework of international institutions and treaties that will bind all states, America included, to rules and commitments. They feel that restrictions on the United States will assuage concerns “about a global order dominated by American power—power unprecedented, unrestrained, and unpredictable.”\textsuperscript{12} And even within the constraints of a rules-based system, America will continue to enjoy a preponderance of power.

The Case of Iraq.

The U.S.-Iraq War of 2003 was a showcase for the different approaches to foreign policy. The American position was clear: Iraq would comply with UN Security Council resolutions requiring it to divest itself of all nuclear, chemical and biological weapons and medium-range missiles or the United States, with whomever was willing to assist, would enforce the resolutions by force. Advocates for unilateral American action argued that the United Nations had been ineffective in enforcing its own resolutions. Iraq posed an imminent threat to the United States, and the United States could no longer tolerate the international community’s unwillingness to force Iraq to comply and disarm. While the United States welcomed other states that were willing to support the forcible disarmament of Iraq, the positions of other states, including key allies and the Security Council, would not influence the course of American foreign policy. The United States saw a need to act and was going to do so. And by acting alone, the United States could actually enhance stability in the Middle East and the globe. An America willing to use its power without the support of the international community would have greater credibility in dealing with other threats. No longer could potential adversaries hope the United Nations or America’s allies could dissuade it from major military action. When the United States said it would act, that would be a credible threat. Knowing the consequences of defying America would deter states from doing so in the future, which could only contribute to stability and to American security.

Multilateralists approached the issue differently. While acknowledging Iraq’s failure to comply with United Nations resolutions and the likelihood that Iraq was in possession of significant quantities of banned weapons, they questioned whether it was in America’s best interest to take military action without broad support within the international community. While it would be faster and militarily more expedient for the United States to forge ahead with a unilateralist Iraq policy, the costs of such a policy were likely to be prohibitive in the long run. By acting largely alone and without broad international support, the United States risked weakening the international norm against unilateral use of military power to resolve political disputes. A war with Iraq had potentially global consequences, both political and economic. By undertaking such a war and assuming these risks for the international community without its approval, the United States would reinforce
fears of unconstrained American power and increase the potential for a future backlash. Finally, the United States risked finding itself burdened with a lengthy and expensive occupation of post-war Iraq. There would be no guarantee of significant international support for post-conflict efforts following a war the United States started and waged largely on its own. Leaving the United States saddled with post-war Iraq would serve as something of a balancing tool. An America committed to a major military presence in Iraq would not find it as easy to exercise military operations in other parts of the world without support from allies. Also, a lengthy and costly overseas commitment could undermine domestic support for future actions.

In the summer of 2003 it is still too early to assess how the Iraq war will affect America’s position in the world or how the world will react to American power. However, the unilateralist and multilateralist camps used the lead up to the war to make their cases for acting more or less unilaterally or within broader international coalitions. While the war and early phases of the occupation of Iraq have not settled the debate, both have established some measures by which to determine if in this case a generally unilateral approach to foreign policy and war helped or hurt America’s long-term standing in the world. The end of the war may have opened the door for progress in the Israel-Palestine conflict, but there has been relatively little international support for post-war occupation, which may leave a substantial portion of America’s ground forces committed to Iraq for some time to come.

**Conclusion: Recent Trends in U.S. Foreign Policy.**

There is a growing view that American foreign policy has tended to be more assertively unilateral in recent years. America’s refusal to join the international ban on antipersonnel land mines, its rejections of the Kyoto treaty on global warming and an inspection and verification protocol for the Biological Weapons Convention, its withdrawal from the International Criminal Court and the Anti-Ballistic Missile Treaty are offered as evidence of a policy of avoiding international commitments that might constrain America’s freedom of action. Critics argue that the United States pursues its own international agenda without regard for the interests, views, or concerns of the rest of the world. The response is that the United States is acting, as all states should and must, in its own self-interests.

In spite of its overwhelming power, in the spring of 2003 the United States found itself embarking on a war with Iraq. While Saddam Hussein was undoubtedly one of the world’s great villains, the United States found itself diplomatically at odds with important traditional allies, politically outmaneuvered and stymied at the United Nations, and opposed by public majorities in virtually every nation in the world. How did the United States, with all its advantages, become so politically isolated? One answer lies in the perception that the United States is using its national power more unilaterally than in the past. International opposition did not prevent the United States from going to war. However, the absence of allies has caused the United States to bear the overwhelming burden of post-conflict operations in Iraq. In contrast, in Bosnia and Kosovo NATO allies and other partners provided the bulk of peacekeeping troops following U.S.-led campaigns.

The perceptions and reality of the extent to which the United States pursues unilateralist policies will undoubtedly affect America’s strategic choices in the future. There are clear trade-offs between sacrificing freedom of action and lowering costs and adding the capabilities of other nations. Considering these trade-offs should be part of the strategic decision-making process for the United States as it wages a global war on terrorism and confronts a range of critical global interests and issues. The United States cannot limit its options by clinging to notions about whether it should act unilaterally or multilaterally. There are times and circumstances for both approaches. The art is to recognize them and select the proper tool.
ENDNOTES - CHAPTER 11

CHAPTER 12
REGIONAL STUDIES IN A GLOBAL AGE

R. Craig Nation

The New Regionalism.

Twentieth century strategy was dominated by global conflict. The First and Second World Wars were implacable struggles waged on the world stage, and they were followed by the Cold War, a militarized contest between superpower rivals described by Colin Gray as “a virtual World War III.” Not surprisingly, interstate rivalry propelled by Fritz Fischer’s Griff nach der Weltmacht (Strike for World Power) gave rise to theoretical perspectives concerning the dynamic of international relations dominated by globalist perspectives. From the founding of the first university department devoted to the formal study of International Relations at the University of Aberystwyth (Wales) in 1919 to the present, globalist and universalizing theoretical models have been at the core of the profession.

Such models have also defined the practice of American foreign and security policy. The venerable traditions of American isolationism and exceptionalism, integral to the founding of the republic, and through most of the 19th century the inspiration for a cautious and discrete U.S. world role, were gradually pushed aside against the background of the Great War by the liberal tradition of benign engagement under the aegis of international law, international organization, and collective security. Though Woodrow Wilson’s project for a U.S.-led League of Nations was frustrated by congressional opposition, in the larger picture there would be no return from “over there.” America was a dominant world power from at least 1916 (when the U.S. became a creditor for the major European powers), and the range of its interests no longer permitted the luxury of an exclusively national or even hemispheric policy focus.

Already on the eve of the Second World War, in his seminal work The Twenty Years’ Crisis, E. H. Carr argued that a relative neglect of the role of power and coercion in international affairs had paved the way for the rise of fascism. Carr’s “realist” perspective, lent theoretical substance in the U.S. by transplanted Europeans such as Hans Morgenthau, Arnold Wolfers, and Stanley Hoffman, who viewed themselves as tutors for powerful but naive American elites, became the dominant conceptual framework for postwar U.S. policy. The classical realism of postwar theorists was never a vulgar philosophy of might makes right, though it is sometimes interpreted in that way. Its most prominent promulgators, often European Jews like Morgenthau who had fled the holocaust and were lucidly aware of what unchecked power set to evil ends could affect, were preoccupied with ethical concerns and the need to constrain the inherent violence of anarchic interstate competition. But the realist tradition made no bones about the need to place power, the global balance of power, and strategic rivalry between competing sovereignties at the center of a globalist worldview. During the Second World War, State Department planners carefully prepared for a policy of engagement based upon the purposeful use of U.S. power to shape a congenial international environment. George Kennan’s containment doctrine, the backbone of U.S. security policy through most of the Cold War decades, was little more than an astute application of realist premises to the management of U.S.-Soviet relations.

Regional conflict was a significant part of Cold War competition, but it too was usually interpreted in a global perspective, as a projection of superpower rivalry into peripheral regions. Architects of U.S. Cold War strategy like Henry Kissinger could publicly opine about the marginality of Third World regions, and assert a great power orientation that perceived the essence of foreign policy as an elegant game of balance between power centers in Washington, London, Paris, Bonn, Moscow, and
Beijing. Nuclear competition between the superpowers, and the theory of strategic deterrence that was crafted to direct it, encouraged ever more abstract modeling of interstate rivalry. These trends culminated in the 1980s with the emergence of “neo” versions of traditional theoretical paradigms that consciously sought to void international theory of its historicist and humanistic foundations. Kenneth Waltz’s neo-realist argument used austere logic in interpreting interstate competition as an abstract calculus of power. The related schools of game and rational choice theory sought to use mathematical modeling to reproduce the dynamics of foreign policy decision-making. Neo-liberal institutionalist models built alternatives to realism upon the universalizing trends of interdependence and globalization, sometimes built upon a simplistic Benthamite utilitarianism. By the end of the Cold War, much of the rationale for U.S. foreign and security policy rested upon assumptions integral to these approaches—the centrality of great power rivalry, the balance of power as the axis of interstate competition, the changing nature of power in an age of globalization where economic strength and various soft power options have accrued in importance, and the need for a competitive strategy to maintain and extend U.S. advantage.

Part of the reigning confusion surrounding the nature of post-Cold War world order derives from the fact that it is no longer defined by an all-consuming rivalry between peer competitors. With a Gross Domestic Product far outdistancing the nearest competitor, levels of defense spending superior to any imaginable combination of rivals, a clear-cut technological advantage, and a strong and stable domestic order, the U.S. stands head and shoulders above any real or potential rival. The current distribution of world power is objectively hegemonic, and American leadership is less a goal than a fact. In the absence, now and for the foreseeable future, of an authentic peer competitor capable of posing a serious challenge to U.S. dominance, balancing strategies such as that promulgated by Russia’s former Prime Minister Evgenii Primakov, seeking to regenerate a “multipolar” world order in which America would be limited to the status of first among equals, must remain essentially rhetorical. Maintaining U.S. status and using the advantages of preeminence to good ends have become primary responsibilities for U.S. security planners. These are tasks that demand different kinds of perceptions and priorities than those motivating policy during the Cold War.

Analyses of new directions in global security policy tend to similar conclusions concerning the kinds of threats that the U.S. will be required to respond to. In contrast with the focused strategic environment of the Cold War years, these threats will be dispersed rather than concentrated, unpredictable and often unexpected, and significantly derived from regional and state-centered contingencies. The threat of global terrorism, in particular, driven forward by widely dispersed terror networks, is rooted in failed states and marginalized regions denied the benefits of balanced modernization and development. These conclusions rest upon shared assumptions about the emerging 21st century world order, the changing contours of global security, and the evolving U.S. world role. The new configuration of global power, which combines U.S. preeminence with considerable regional fragmentation and turbulence, ensures that major world regions will be an ever more important target for U.S. engagement—as sources of critical strategic resources, as platforms for geostrategic leverage, as breeding grounds for terrorism, as integral parts of an increasingly interdependent global economy, and as testing grounds for great power will and determination to impose rules of the game. Preeminence does not imply total control. Influence in key world regions will be a significant apple of discord between the hegemonic leader, great power rivals, and influential local powers. Regions and sub-regions will remain the primary forums for armed conflict and instability, with a variety of small wars and protracted stabilization operations posing the greatest demands upon a U.S. military committed to engagement and shaping strategies. Aspiring regional hegemons, sometimes tempted by hopes of gaining access to weapons of mass destruction, will continue to promote disorder and pose direct threats to important U.S. interests. To navigate effectively under these circumstances, U.S. strategists will have to base international
engagement upon a sophisticated understanding of major world regions, viewed not only in regard to their place within an overarching structure of world power, but as entities in their own right, including the underlying social, political, and cultural processes that make the national and regional context unique.

For all of these reasons, regional studies will remain a necessary foundation for an integrated curriculum in national security policy and planning. If the 20th century has been the century of global conflagration, the 21st century seems poised to become the century of regional disaggregation. New directions in international relations theory, cast around concepts such as turbulence and chaos theory, have been honed to highlight these trends. For U.S. policy makers, the challenge will be to integrate regional perspectives and sensitivities to national and regional dynamics into a realistic and balanced approach to the pursuit of global security; not to question the relevance of regional perspectives (which should be self-evident), but to better understand the ways in which they need to be joined to a comprehensive strategy for the pursuit of national interest.

**What Is a Region?**

Regions may be defined and distinguished according to an approximate combination of geographic, social, cultural, and political variables. Unambiguous distinctions, however, will always be elusive. As an analytical category in international relations, the “region” is fated to remain contingent and contentious. Geographical contiguity is clearly a prerequisite for regional identity, but drawing uncontested boundaries is usually an impossible task. The concept of “eastern Europe” once had a fairly high degree of integrity, but since 1989 it has virtually disappeared from the political lexicon. The phrase “Middle East,” which was originally the product of colonialist and Eurocentric world views, continues to be used (often rendered as a “Greater Middle East”) to describe an extremely diverse area stretching from the Maghreb into distant Central Asia. Meanwhile, the designation of an eastern Mediterranean Levant has fallen out of fashion. The Balkans has been regarded as a distinctive European sub-region for well over a century, but almost any Balkan state with elsewhere to turn rejects the designation unambiguously. “All regions,” writes Andrew Hurrell with some justification, “are socially constructed and hence politically contested.”

One of the more influential recent attempts to delineate regions according to cultural criteria has been Samuel Huntington’s clash of civilizations thesis. Huntington identifies nine world civilizational zones based significantly, though not entirely, upon confessional affiliation. The argument that geostrategy will be increasingly dominated by civilizational conflict waged along the “faultlines” dividing these zones has been widely used to explain the apparent upsurge in ethnic conflict of the recent past. Huntington’s argument, however, is neither entirely novel nor altogether convincing. Geopolitical analysis has long used the idea of the “shatterbelt,” defined as a politically fragmented and ethnically divided zone that serves as a field of competition between continental and maritime powers. Great civilizations cannot be precisely bounded spatially, and they are rarely either entirely homogenous or mutually exclusive. Huntington’s attempt to designate geographically bounded civilizational zones, and to use these zones as the foundation for a theory of geostrategy, rests on suspect premises.

Barry Buzan has developed the concept of the “regional security complex” in an effort “to offset the tendency of power theorists to underplay the importance of the regional level in international security affairs.” He makes the assertion that in security terms, “‘region’ means that a distinct and significant subsystem of security relations exists among a set of states whose fate is that they have been locked into geographical proximity with each other.” The existence of a “subsystem” of security relations presumes high levels of interdependence, multiple interactions, and shared sensitivities and vulnerabilities. Any attempt to identify such complexes empirically, however,
poses obvious problems. Regional security complexes are rarely if ever defined exclusively by geographical proximity, they are often dominated by external powers, and they are sometimes held hostage by national-cultural variables or systemic dynamics. The United States is the focus of functioning security complexes in both Europe and Asia. Turkey and Israel lie within different security complexes according to most of Buzan’s criteria, but they have developed a close bilateral relationship that impacts significantly upon their relations with contiguous states. Transnational threats such as terrorism, international crime, drug trafficking, illegal migration, or environmental disintegration also overlap regions and create dynamics of association that prevent security complexes from becoming significantly self-contained.

The U.S. makes an approximate distinction between geographic regions in the Unified Command Plan that lies at the basis of its war-fighting strategy, by fixing the contours of unified command areas assigned to combatant commanders. This approach originally evolved from the division of responsibilities adapted by the U.S. to fight the Second World War, and was formalized by the National Security Act of 1947. Over the years the geographic division of responsibility has been adapted repeatedly, on the basis of changes in the international security structure, technological advances, and strategic calculation, but also bureaucratic infighting over areas of responsibility and access to resources. Combatant commanders have recently been required to draw up an annual Theater Engagement Plan defining regional shaping priorities, but they are primarily war-fighters, and the division of responsibility which the current unified command plan structure embodies is geared to position the U.S. to prevail in armed confrontations. Contemporary U.S. national security strategy, mandating readiness to fight two nearly simultaneous major theater wars, has concentrated the attention of the combatant commanders on the areas where such conflicts are presumed to be most likely—in the Middle East/Southwest Asian and Western Pacific/Northeast Asian theaters. The regional distinctions built into the Unified Command Plan are arbitrary, but they are geared to the performance of the functional tasks of warriors and do not always rest upon careful conceptual distinctions.

David Lake and Patrick Morgan define region minimally, as “a set of countries linked by geography and one or more common trends, such as level of development, culture or political institutions.” Their definition has the advantage of simplicity, but it is potentially too broad to be really useful, and is also possibly misleading. The nation-state is sometimes an inadequate building bloc for regional complexes. Any viable definition of the post-Soviet Central Asian region would have to include China’s Xinjiang province, whose population is composed of 60 percent Turkic Muslims. Russia’s far eastern provinces are an integral part of the Asia-Pacific region, while the core of historic Russia is an extension, both geographically and culturally, of a greater Europe. Ukraine’s population is divided politically along the line of the Dnipro River, with the western provinces affiliating with an enlarged central Europe and the eastern provinces oriented toward the Russian Federation and Eurasia. Northern Mexico and southern California have become intimately associated as a result of high levels of economic interaction and cross-border movement of peoples. The European Union has even sought to institutionalize transnational communities, by creating multi-state districts designated as “Euro-regions.” The commonalities used to distinguish regions cannot be terminated artificially at national boundaries, and “one or more common trends” is too weak a foundation for association to give regional designations analytical substance.

In its regional studies curriculum, the U.S. Army War College designates six major world regions on the basis of broad geographical criteria—Europe, the Middle East, Africa, Russia and Eurasia, the Asia-Pacific region, and the Americas. These are designations of convenience intended primarily for pedagogical purposes. Our working definition of what constitutes a region is of necessity broad and multidimensional. Geographical propinquity; a sense of identity and self-awareness based upon shared experience, ascribed traits, or language; a degree of autonomy within the international
state system; relatively high levels of transactions; economic interdependencies; and political and cultural affinity may all be cited as relevant criteria. It is presumed that there will be gray areas and significant overlap between regions however they are defined. The Turkish Republic, for example, is simultaneously part of a wider Europe, a greater Middle East, and post-Soviet Eurasia. No single set of associations is essential, and in the best of cases fixing the contours of major world regions and sub-regions will remain a problematic exercise.

World Regions and World Order.

However regions are defined and differentiated, the impact of local, national, and regional dynamics upon world politics is substantial and destined to grow larger. For the foreseeable future, effective strategy will require sensitivity to the various ways in which regional affairs condition the global security agenda, channel and constrain U.S. priorities, and affect a changing world order.

Regional instability poses diverse kinds of challenges to U.S. interests. Iraq’s occupation of Kuwait in 1990 placed a critical mass of Middle Eastern oil reserves in the hands of an ambitious and hostile regional power, thus posing a clear threat to vital interests. Such dramatic scenarios will not occur very often, but the potential consequences are so great as to demand high degrees of readiness. “Rogue states,” which aspire to regional hegemony and whose leaders are often defiant of international norms, are now acknowledged as a distinct threat in their own right. The most persistent challenges of recent years have been the chronic instability born of flawed regional orders marked by severe impoverishment, unequal development, frustrated nationalism, ethnic rivalry, and the “failed state” phenomenon, where weak polities lose the capacity to carry out the basic tasks of governance. Embedded terrorism, exploiting failed regional systems as sanctuaries for the pursuit of global agendas, has been a dramatic consequence.

In the post-Cold War period, the U.S. armed forces have been called upon to participate in an unprecedented number of complex contingency operations ranging from simple non-combatant evacuations to extensive, protracted, and dangerous peace enforcement and peacekeeping duties. The logic of U.S. engagement is usually impeccable. Unchecked regional or civil conflicts risk escalation with broadening consequences; threaten the credibility of the U.S., its allies, and major international instances as guarantors of world order; and confront decision makers with horrendous and morally intolerable humanitarian abuses. But the U.S. should not feel obligated, nor can it afford, to take on the role of global policeman. Protracted and open-ended peacekeeping deployments risk to undermine combat readiness by disrupting training routines, erode the morale of the volunteer force, and pose the constant possibility of deeper and higher-risk engagement. Shaping regional complexes to head off resorts to coercive conflict behavior, and responding to regional challenges, if possible preemptively and under the aegis of international organizations or multinational coalitions, have, as a result, become pillars of U.S. security policy.

The challenges of civil war and low-intensity regional conflict will not go away or diminish. In a larger historical perspective it seems clear that the total wars of the twentieth century have been exceptional events rather than typical ones. Prior to our century, technological limitations made the concept of “world” war unthinkable—warfare, of necessity, was waged within physically constrained theaters on the regional level. Ironically, the technological possibilities unveiled with the creation of massive nuclear arsenals during the Cold War have once again made the outbreak of hegemonic warfare between great power rivals highly unlikely, as well an eminently undesirable. The increasing lethality (and expense) of modern conventional armaments only further raises the threshold of total war. While the Kantian thesis that great power warfare has become obsolete may or may not be credible, it rests upon substantial foundations. If for no other reasons than those imposed by the evolving technology of violence, wars and armed confrontations are today once
again being contested almost exclusively as low and medium intensity conflicts on the local and regional level. “In the foreseeable future,” write Lake and Morgan, “violent conflict will mostly arise out of regional concerns and will be viewed by political actors through a regional, rather than global, lens.”

In some ways, Cold War bipolarity worked to constrain regional conflict. Neither superpower could afford to tolerate an uncontrolled escalation of regional rivalry that risked drawing it into a direct confrontation, and regional allies were consistently pressured to limit their aspirations and bend to the will of their great power sponsors. It is difficult to imagine that the anarchic disintegration of the Yugoslav Federation would have been allowed to proceed unchecked in 1991 had the fragile European balance of terror of the Cold War system still been at risk. The extent of such constraint may nonetheless be exaggerated. Many of the regional conflicts of the Cold War era—in southern Africa, the Horn of Africa, Afghanistan, the Middle East, or southern Asia—have perpetuated themselves into the post-Cold War period. Cumulatively, post-World War II regional conflicts have occasioned the deaths of over 25 million individuals, and the incidence and intensity of such conflicts continues to increase.

A composite portrait of post-Cold War regional conflict calls attention to the difficulties involved in programming effective responses. The large majority of contemporary “limited” wars are civil wars or wars of secession, waged with the ferocity that is typical of such contests. Combat operations often include the significant engagement of poorly controlled and disciplined irregular forces. The bulk of casualties are imposed upon innocent civilians, sometimes including genocidal massacre and forced population transfers (ethnic cleansing). While often obscure in terms of their origins, such conflicts are usually highly visible. The modern mass media, commercially driven and chronically in search of sensation, brings regional chaos “into the living room” and generates popular pressure to respond that political leaders often find difficult to ignore. Limited and often frustrated or only partly successful intervention by the international community in the role of would-be peacemaker is another shared trait that gives many contemporary regional conflicts a fairly uniform contour. Wayne Burt notes correctly that, in comparison with the structured context of Cold War bipolarity, the “post-Cold War world is a much ‘messier’ world where limited conflict will be fought for limited and often shifting objectives, and with strategies that are difficult to formulate, costs that are uncertain, and entrance and exit points that are not obvious.”

As undisputed world leader, and the only major power with significant global power projection capacity, the U.S. is often compelled to react to such conflicts whether or not it has truly vital interests at stake. America’s ability to manage and shape the conflict process is nonetheless severely limited. A decade of struggling with regional conflict in post-communist Yugoslavia, including intensive diplomatic efforts, punitive air strikes, large and open-ended peacekeeping deployments, and a full-scale war over Kosovo, has led to what may at best be described as a mixed result. Peace enforcement and peacekeeping responsibilities have been carried out with impressive efficiency, but the much more problematic, and politically charged task of post-conflict peace building has proven to be something close to a mission impossible.

Since the terrorist attacks against New York and Washington on September 11, 2001, the phenomenon of embedded terrorism has become another manifestation of how regional instability may provoke intense political violence. U.S. military actions in Afghanistan and Iraq have been designed to strike at terror nests, but it has quickly become apparent that defeating designated enemies is only part of the challenge. Post-conflict reconstruction efforts have demanded an increasingly sophisticated awareness of local norms and values, and heightened sensitivities to the cultural context within which stability operations are being pursued. Army Provincial Reconstruction Teams in Afghanistan have striven to develop closer working relations with local populations and build a foundation of trust based upon mutual understanding that will make it more difficult for terrorist cells to relocate in the areas in the future.
The U.S. has made the maintenance of regional stability a pillar of its security strategy, but the forces of disintegration at work within many world regions are daunting. Effective responses will first of all require some selectivity in choosing targets for intervention. When we do elect to become involved, our efforts should be based upon a much greater awareness of regional realities than has been manifested in the recent past. We will also need to make better use of friends and allies. Regional instability is often best addressed by local actors, who usually have the largest vested interest in blocking escalation, and in some cases regionally based conflict management initiatives can become a significant stimulus to broader patterns of regional cooperation. Engaging allies and relevant multilateral forums in managing regional conflict, as the U.S. has sought to do with the African Crisis Response Initiative, should be a high national priority.

Geopolitics.

Many currently fashionable approaches to international relations assume the decline of territoruality as a motive for state behavior. The dominant trend in world politics is persistently, albeit vaguely, described as globalization, implying a rapid increase in interactions fueled by revolutions in communications and information management, the emergence of a truly global market and world economy, the primacy of economic competition as a mode of interstate rivalry, and an unprecedented space-time compression that places unique demands upon decision-makers. The globalization scenario is built on overarching generalizations about world order and it rests upon universalizing premises that leave little space for sticky concern with the intricacies of regional affairs. There are alternatives to theoretical perspectives cast on so high a level of abstraction however, and they bring regional issues into the forefront of international discourse. Most important among them is the tradition of geopolitics.

The core challenge of geopolitical analysis is to link the systematic study of spatial and geographical relations with the dynamic of interstate politics. As a formal discipline, geopolitics dates from the late nineteenth century work of the Leipzig professor Friedrich Ratzel. His 1897 study *Politische Geographie* (Political Geography) presents states as organisms with a quasi-biological character, rooted in their native soil, embedded in a distinctive spatial context or Lebensraum (living space), and condemned to either grow and expand or wither away. In the works of various contemporaries and successors, including Alfred Thayer Mahan, Rudolf Kjellén, Halford Mackinder, Alfred de Severing, Klaus Haushofer, and Nicholas John Spykman, these insights have been pushed in a number of directions. The strong influence of geopolitical categories, especially as transmitted through the work of Haushofer, upon Adolf Hitler’s strategic program during the 1930s has brought enduring discredit upon the discipline, widely but unfairly regarded as a vulgar amalgam of social Darwinism and military expansionism. In fact, in its manifold and not always consistent manifestations, geopolitical analysis presents a range of alternative strategic perceptions whose common ground is a sense of the permanent and enduring relevance of spatial, cultural, and environmental factors in world politics. These are also the factors that stand at the foundation of regional studies.

Geopolitics is rooted in the study of geography, broadly but relevantly defined by Saul Cohen as “spatial patterns and relations that reflect dynamic physical and human processes.” Geography is a rich and complex construct that provides a context for weighing the impact of a number of significant but often neglected variables. These include ethnicity, nationalism, and the politics of identity; access to natural and strategic resources; geostrategy and the role of lines of communication and strategic choke points; relations between human communities and their natural environment; and the strategic implications of increasing environmental stress. It encompasses demographic issues such as population growth, cycles of migration and changing patterns of population distribution,
and “decision-making milieus” including Huntingtonian civilizational zones, political systems and political cultures, as well as the spatial distribution of power within the world system.

Geopolitical analysis is best known in the West as refracted by Halford Mackinder’s heartland concept, which defines control of the Eurasian landmass as the key to world power. Mackinder distinguished between a World-Island encompassing the joined continents of Europe, Asia, and Africa, the Eurasian Heartland approximately equivalent to Russia and Central Asia, and the Rimlands (including east-central Europe) along the Eurasian periphery. “Who rules East Europe,” he wrote in a famous passage, “controls the Heartland. Who rules the Heartland commands the World-Island. Who rules the World-Island commands the World.”

Mackinder was not a fascist militarist, but a moderate professor and civil servant, whose thinking lay at the foundation of British strategy through much of the twentieth century. By calling attention to the spatial dimensions of grand strategy, his work points out the extent to which geostrategic concepts have been and continue to be at the heart of modern statecraft.

A striking contemporary illustration of the continuing impact of geopolitical perspectives is provided by the heartland power par excellence, the Russian Federation, where disillusionment with the gilded promises of globalization and integration with the U.S.-led world economy have led to a rapid and broadly influential revival of geopolitical theory. The new Russian geopolitics has been dismissed in the West as a manifestation of radical extremism, a sort of Russian fascism born of the post-communist malaise. In fact, core geopolitical perceptions (the need to maintain the integrity of the Russian Federation, the call to reassert a strong sphere of influence in the territories of the former Soviet Union, the cultural distinctiveness of the Russian Idea and its historical role as a force for integration in the expanses of Eurasia, the need for alliances to balance and contest American hegemony) have moved into the mainstream of Russian strategic thought and enjoy strong support.

Haushofer has written that “geopolitics is the science of the conditioning of political processes by the earth,” and that “the essence of regions as comprehended from the geopolitical point of view provides the framework for geopolitics.” This is a plaidoyer for the concrete and substantial, for a theory of world politics built from the ground up. Effective geopolitical reasoning leads us back to the earth, to the distinctive political communities nested upon it, to the patterns of association that develop between them, and to the conflicts that emerge from their interactions. It is not the only school of thought that prioritizes the relevance of geography and regional studies, but it provides a particularly good example of the relevance of the textured study of peoples and places as a foundation for effective strategy.

The Cultural Dimension of Warfare.

The maxim “know thy enemy” is often counted as the acme of strategic wisdom. It is unfortunately a maxim that has not always been highly respected in the U.S. military and security communities. War has organizational and technological dimensions which make it a rigorous, practical, and precise enterprise, but wars are also waged between calculating rivals in a domain of uncertainty, and by distinctive political communities in ways that reflect deeply rooted, culturally conditioned preferences.

During the Cold War, the U.S. made an intense effort to understand the societal and cultural dynamics shaping the perceptions of its Soviet rival, arguably to good effect. In general, however, in-depth knowledge of national and regional cultural dynamics has not been a strong point for U.S. strategy, which has tended to rest upon the sturdy pillars of relative invulnerability and the capacity to mobilize overwhelming force. In the volatile and uncertain security environment of the years to come, however, the assumption of technological and material advantage may not be a safe one,
nor will these advantages always suffice to ensure superiority in every possible contingency. The People’s Republic of China represents a potential long-term rival with considerable assets and great self-confidence, derived in part from a highly distinctive and ancient culture.40 Russia’s current Time of Troubles has temporarily brought her low, but eventually the inherent strengths that made the USSR so formidable a rival during the Cold War decades will reassert themselves. We confront a long-term struggle to manage the dilemmas of modernization in the Arab and Muslim worlds, and the associated dynamic of terrorism, that will demand sophisticated cultural awareness. The U.S. will need to know “what makes them tick” if it wants to manage its relations with potential peer competitors and troubled world regions successfully. Effective intervention in complex contingencies will likewise demand in-depth knowledge of real or potential rivals. Strategy is not uniquely the product of culture, and culture itself is not a lucid or unambiguous construct. But all strategy unfolds in a cultural context, and cannot be fully or properly understood outside it.

Colin Gray defines strategic culture as “the socially constructed and transmitted assumptions, habits of mind, traditions, and preferred methods of operation ... that are more or less specific to a particular geographically based security community.”41 The foundations of strategic culture are the fundamentals of culture itself; shared experience, language, common governance, and values. The cultural orientation that derives from these commonalities, it can be argued, affects the ways in which polities conduct diplomacy, define and pursue interests, and wage war. In his controversial History of Warfare, John Keegan suggests that throughout history war has always been an essentially cultural phenomenon, an atavism derived from patterns of group identification and interaction rather than the purposeful activity implied in Clausewitz’s famous dictum that “war is the continuation of politics by other means.”42 Victor Hanson argues that the ancient Greek preference for physical confrontation and quick decision has created a “Western way of war,” dominated by a search for decisive battle and strategies of annihilation, a tradition that remains alive to this day.43 Such conclusions are extreme, but they are useful in underlining the fact that wars are conceived, plotted, and waged by socially conditioned human agents.

As a dominant global power the U.S. will be called upon to wage war in a variety of contexts in the years to come. A better understanding of the strategic cultures of real or potential adversaries will place another weapon in its arsenal and strengthen prospects for success. In Bernard Brodie’s classic formulation, “good strategy presumes good anthropology and sociology. Some of the greatest military blunders of all time have resulted from juvenile evaluations in this department.”44 Knowing the enemy goes well beyond order of battle, to the sources of strategic preference and military operational codes that are grounded in the social and cultural context of distinctive nations and regions.45

Espaces de Sens: Regional Alliance and Association.

The Cold War was a phase of intense global competition manifested in ideological polarization, arms racing, and militarized regional rivalry. It nonetheless offered a structure of purposeful endeavor for its leading protagonists, as well as for critics who sought alternatives to what they perceived as the dead-end of belligerent bipolarity. The USSR justified its international policy on the basis of a distinctively Soviet variant of Marxism-Leninism. The U.S. consciously developed its Cold War strategy as a defense of the values of freedom and democracy. Various non-aligned alternatives called for a plague upon both houses, and sought to develop a third way independent of either power bloc. Regardless of where one stood, world politics took on the contours of a moral tale infused with meaning.

The end of the Cold War was accompanied by a certain euphoria, captured by Francis Fukuyama’s “End of History” thesis, according to which the demise of the communist challenge meant “the end
of history as such: that is, the end point in mankind’s ideological evolution and the universalization of Western liberal democracy as the final form of human government.”

Fukuyama’s sweeping optimistic argument promised an era of global harmony in which interstate strategic rivalry would give way to cooperation under the impetus of democratization, development, and consumerism, promoted by a benign American hegemony. In place of a contest of values, Fukuyama’s Hegelian vision looked forward to the unchallenged primacy of the culture of the West.

Needless to say, nothing of the kind has transpired. The post-Cold War period has been marked by regional turbulence, torturous and sometimes unsuccessful post-communist transitions, violent ethnic conflict, the rise of global terrorism as a major challenge to the premises of world order, and continued, if sometimes muted, great power rivalry. Western values are contested rather than embraced, and the absence of a compelling sense of overall direction, of a larger domestic or international project, of a source of signification and meaning, has arguably become a problem in its own right. Uncertainty about direction has also contributed to strategic confusion. The suspicion or rejection of large civilizational projects that has become so prominent a part of contemporary post-structuralist and social constructivist approaches to international theory, often accompanied by quasi-indifference to any kind of strategic analysis whatsoever, reflects the state of affairs with great clarity.

The United Nations, symbol of an earlier generation’s aspirations for a more peaceful world order, has languished during the post-Cold War decade. In contrast, projects for regional association have flourished. Realist theory portrays the formation of alliances and regional blocs as an “outside-in” phenomenon, occurring as a response to real or perceived external challenges, whether via “balancing” efforts to correct a maldistribution of power, or “bandwagoning” whereby weak polities seek to dilute threats through association with a hegemonic leader. Neo-mercantilist approaches follow an identical pattern in explaining regional association as a logical response to enhanced international economic competition. But regional association may also be understood as a function of “inside-out” dynamics driven by social and cultural trends. Zaki Laïdi has argued that, in the face of the universalizing tendencies of globalization, meaningful civilizational projects can only be constructed on a regional basis, as espaces de sens (spaces of meaning) bound together by a complex of historical, social, cultural, political, and economic associations. These are contrasting arguments, but they are not mutually exclusive. Both “outside-in” and “inside-out” approaches to regional association need to be combined in an effort to come to terms with a phenomenon that has the potential to transform world politics root and branch.

The “new regionalism” is manifested both by the revitalization of traditional regional organizations and the creation of new forms of regional association. Large regional or sub-regional blocs with a history of institutionalization, such as the European Union (EU), the African Union, the Organization of American States (OAS), the Association of Southeast Asian Nations (ASEAN), and the Gulf Cooperation Council (GCC), often have a strong security orientation, though today their focus is more often placed upon internal conflict management than external threats. The proliferation of regional projects for economic integration, including some of the organizations listed above as well as others such as the North American Free Trade Association (NAFTA), the Asia-Pacific Economic Cooperation Forum (APEC), the Southern African Development Community (SADC), the Arab Magreb Union (AMU), the Black Sea Economic Cooperation (BSEC), the Southern Cone Common Market (MERCOSUR), the Andean Pact, the Central America Common Market (CACM), the Commonwealth of Independent States (CIS), and the South Asian Association for Regional Cooperation (SAARC), has an obvious economic logic, but also a strong cultural foundation; within these broadly drawn and sometimes overlapping zones of association one may observe a powerful revival of regional and sub-regional awareness and identity. In other cases, functionalist logic prevails. Regional associations are sometimes appropriate forums for approaching large global
problems such as environmental disintegration, occasioned on the systemic level but not always effectively addressed on that level.

Regional alliances and associations play a critical role in U.S. strategy. The most important by far is the Atlantic Alliance, uniquely successful as a formal security association over many decades, but an organization whose *raison d'être* has been called into question in the new circumstances of the post-Cold War. NATO was originally built up and maintained as an organization for collective defense against a clear and present external threat. The collapse of the USSR and the disappearance of the Warsaw Pact have made this aspect of its identity considerably less important, if not altogether irrelevant, but the Alliance has adapted by restructuring itself as a “new NATO” including commitments to enlargement, out of area peace operations, and gradual movement toward a broader collective security orientation. Former Secretary General Javier Solana describes the process extravagantly, as a “root and branch transformation” aimed to create “a new Alliance, far removed in purpose and structure from its Cold War ancestor,” inspired by the premise of “cooperative security.”

This “new” NATO is arguably more important than ever in the broader context of U.S. security policy, as a platform for power projection, as a forum for managing relations with key allies, as an instrument for reaching out to the emerging democracies of eastern Europe, as the foundation for a new European security order, and as a context for engaging the Russian Federation in a cooperative security effort.

The Atlantic Alliance is also a regional pact, whose stability has always been presumed to rest in part upon close historical and cultural associations between the U.S. and its European partners. Unfortunately, the new NATO will not have the luxury of assuming that a close cultural affinity will continue to link both sides of the Atlantic indefinitely. Changing demographic balances in the U.S. are reducing the proportion of citizens with European roots and heritage. Enlargement has made NATO itself a politically and culturally more diverse organization, where decision by consensus will be harder to achieve. Most of all, the project for European unification is moving slowly but steadily toward the goal of a more autonomous European subject possessed of the capacity to pursue an independent foreign and security policy. Managing regional conflict in the Balkans placed strains upon Alliance mechanisms. The Kosovo conflict generated considerable tension between the U.S. and its European allies, key allies were disappointed by the U.S. decision not to leverage the Alliance in a more significant way during its initial campaign in Afghanistan, and differences over the choice of a military option against Saddam Hussein’s Iraq in 2003 brought alliance partners to the brink of an overt break. NATO continues to rest upon secure foundations, but friction in trans-Atlantic relations persists and it likely to grow stronger as the European project continues to unfold and efforts to bolster a European defense identity progress. Alliance management, based upon a careful appreciation of changing European realities and awareness of the cultural specificities of key European partners, will be an ever more important strategic task.

Other forms of regional association represent potential dangers. At least since the Iranian revolution of 1979, concern for an emerging “Islamic threat” has been prominent in U.S. policy circles. These concerns, to some extent understandably, have become considerably more prominent since the attacks of September 11, 2001. Somewhat less prominent, unfortunately, has been an informed understanding of what Islam is and is not, as a religion, as a philosophy of governance, and a way of life. The possible solidification of a Russian-Chinese strategic axis, which would rest in large measure upon mutual alienation from the West, has the potential significantly to effect global power balances, and the European Union clearly aspires to challenge the U.S. economically. Contesting, co-opting and counter-acting these kinds of patterns will remain an important priority for U.S. planners.

There is an unmistakable momentum pushing in the direction of stronger local and regional identities, and more robust regional association. For some analysts, the trend is part and parcel
of a “retreat from the state” occasioned by changes in the locus of power in the global political economy, whose logical endpoint will be a “new medievalism” in which alternative forms of political association, with a more pronounced regional character, will eventually come to prevail.54 Whether or not such forecasts are correct, shifting patterns of association and the heightened visibility of a variety of regional forums are clear manifestations of the increased relevance of regional perspectives in global security affairs.

Conclusions.

The foundations of regional studies have changed remarkably little over time. Substantive understanding of major world regions demands a thorough mastery of the relevant specialized literature, careful and persistent monitoring of events and trends, appropriate language skills, and a period of sustained residence allowing for immersion in regional realities, accompanied by periodic visits to keep perceptions up-to-date. Regionalists need refined skills that demand a considerable investment of time and resources to create and maintain. If the argument presented in this essay is correct, however, and regional dynamics will in fact become an increasingly important part of the international security agenda in the years to come, the investment will be well worth making.

Although the confines of major world regions and sub-regions are difficult to fix with a great deal of consistency and rigor, the relevance of local, national, and regional perspectives in international political analysis is more or less uncontested. For U.S. strategists in the post-Cold War period the importance of such perspectives is particularly great. In the absence of a peer competitor, significant challenges to U.S. interests are most likely to emerge from various kinds of regional instability, including threatened access to critical strategic resources, the emergence of “rogue” states with revisionist agendas, embedded terrorism, and persistent low and medium intensity conflict. In an increasingly integrated world system, geographic, cultural, and environmental factors that are importantly or uniquely manifested in the regional context will play an increasingly important role in shaping national priorities and international realities. Strategic culture is a vital context for war-fighting, as relevant to contests with peer competitors as it is to clashes with less imposing adversaries in regional contingencies. Shifting patterns of regional association, often motivated by a heightened sense of regional identity and a search for meaning and relative security in the face of the impersonal and sometimes dehumanizing forces of globalization, is an important worldwide trend. None of these dynamics can be properly incorporated into U.S. security strategy without a solid understanding of regional decision-making milieus and cultural proclivities.

To assert the importance of regional approaches in a balanced strategic studies curriculum is not to deny the relevance of alternative perspectives. Universalizing theory is essential and unavoidable. The formal and technical specializations necessary to make sense of political and military affairs are ineluctable. And there is the ever-present danger of regionalists falling into a narrow preoccupation with local problems and personalities, while missing the larger, structural forces at work in the background. In context, however, and approached with appropriate modesty, regional perspectives have an essential place in strategy formulation.

The U.S. Army War College builds a regional studies component into its core curriculum, structured around the six major world regions mentioned above and focused on the effort to define and understand U.S. interests at stake on the regional level. Students are exposed to an in-depth study of a particular region, and to an overview of all six world regions, as a foundation for the school’s capstone exercise, which tests their ability to manage a series of overlapping regional crises in an integrated political-military framework. Students are expected to become familiar with the general historical, cultural, political, military, and economic characteristics of the six major world regions; to evaluate U.S. national and security interests in these regions and to identify the kinds
of challenges that are most likely to emerge; and to develop a regional strategic assessment that identifies alternative courses of action that can lead toward the achievement of U.S. national security objectives. The skills and expertise garnered during this bloc of instruction should make a vital contribution to the cultivation of future strategic leaders.

Regional strategic analysis is also of particular relevance to Army leaders. Though we live in the age of jointness, the Army remains the service branch primarily charged with placing boots on the ground in regional contingencies. Its operational environment is the land, where people live and societies are rooted, and it must at a minimum come to terms with the geographical realities of the places where it is constrained to operate, and the cultural characteristics of the peoples it is charged to fight or to protect. The emphasis on regional studies in the U.S. Army War College strategy curriculum stands out among our senior service schools. Experience, as well as common sense, shows that it is an emphasis well-placed.

ENDNOTES - CHAPTER 12

CHAPTER 13

“LAWYERS, GUNS AND MONEY”: TRANSNATIONAL THREATS AND U.S. NATIONAL SECURITY

Paul Rexton Kan

Although the singer Warren Zevon may not have been aware, the title of his song “Lawyers, Guns, and Money” represents several facets of transnational threats, like cross-border crime, that comprise the international security environment in which the United States must operate. Transnational threats do not recognize the significance of borders, their effects are wide ranging with consequences in multiple nation-states, they transcend the capacity of a single nation-state to confront them adequately, and they are loosely structured, if structured at all. Transnational threats represent a type of non-conventional threat that are not directed by the actions or policies of the government of a nation-state. Such threats include actors like terrorists, drug traffickers and organized criminal syndicates who are involved in activities like mass murder, extortion, bribery, kidnapping, money laundering, drug trafficking, human smuggling, illegal arms trading, sea piracy, theft of art and cultural objects, cybercrime and the illicit trade of gemstones, timber and oil. Such activities are estimated to generate a volume of financial flow on the order of $600 billion annually.¹

Moreover, these actors and actions are increasingly multifaceted. Several terror groups like Al Qaeda and Hezbollah are involved in drug trafficking and money laundering, while traditional drug smuggling groups in Mexico have evolved into “trafficking network organizations” since they are also involved in a range of smuggling activities like human smuggling and arms trafficking.² Such actors combine corporate and criminal cultures, “conducting criminal business not only with ruthlessness but also with a degree of business skill worthy of many CEOs.”³

An equally important, but routinely overlooked quality of transnational threats is that they are increasingly difficult, if not impossible, to peel away from the process of globalization. In fact, the potency of transnational threats has grown as border enforcement and capital controls have loosened and as free trade agreements have expanded. As a result, responding to them with governmental action is exceptionally thorny. Attempting to tackle transnational threats in a comprehensive manner would mean greatly reducing the efficiencies of globalization like the speed of transportation and commercial transactions—to have all ports worldwide routinely check every shipping container for illicit commodities is not feasible, while any attempts to do so would reduce a government’s capacity to provide for the economic well-being of its citizenry.

There are also other transnational threats like the N5N1 bird flu virus and climate change that are “threats without threateners” since they do not have an agent at all.⁴ Pathogens are not “actors” on the international stage—a virus does not seek a seat in the UN General Assembly. Even without an actor who is responsible for these phenomena, pathogens and natural catastrophes share the qualities of transnational threats by ignoring borders, affecting multiple nation-states, transcending the capacity of a single nation-state to confront them adequately while not emanating from a structured organization. Likewise, tackling them in a comprehensive manner would significantly affect the process of globalization—screening all airline passengers for infectious disease would dramatically interfere with global transportation. And, as of this writing, no one has been able to control tsunamis, earthquakes and rising sea levels.

Facetiously labeled as “thugs, bugs, and drugs,” transnational threats are, as James Rosenau describes, “sovereignty-free” and serve to remind national security professionals that there are
other issues beyond the conventional state-centered ones that can rise to high levels of national importance. The challenge is that “traditional or Westphalian states are not prepared to deal with non-governmental dynamics operating outside the domains of state and alliance systems. Doctrine and force structures are designed around traditional concepts of overwhelming conventional force to achieve decisive victory against established state militaries.”5 While these threats are unfamiliar and responses cannot solely rely on traditional approaches, transnational threats are not immune from treatment; they must be addressed in priority of their importance to U.S. national interests just like any conventional security challenge. This chapter examines the ways that transnational threats can affect the U.S. national security agenda and demonstrates how decisionmakers will need to become more comfortable in developing complex responses to them.

Transnational Threats as Direct Threats.

Transnational threats are direct threats to U.S. national security. One can argue that threats like drug dealing, terrorism, organized crime and pandemics directly challenge the authority of the U.S. Government to provide for the general welfare while protecting the U.S. homeland from events that can lead to the undermining of its territorial integrity, economic prosperity or vital institutions of government. Such a case is not difficult to make—leaders have argued that the use and abuse of hard core narcotics by U.S. citizens undermines law and order. Indeed, in 1989, President George H. W. Bush addressed the nation on prime time television, held up a bag of crack cocaine seized across from the White House days prior to the speech and proclaimed that “the gravest domestic threat facing our nation today is drugs.”6 Just a few weeks after that speech, President Bush sent the U.S. military in a major joint operation to capture Panamanian President Manuel Noriega for drug trafficking crimes. In both word and deed, President Bush elevated the battle against the drug trade to the same level as combating Soviet-inspired communism.

The terrorist attacks of September 11, 2001, demonstrated the dramatic increase in the lethality of violent non-state actors. By utilizing the benefits of globalization—the internet, electronic banking, air travel, student visas—less than two dozen individuals were able to kill thousands of U.S. citizens and cost the U.S. economy billions of dollars. These series of attacks on a single morning revealed the catastrophic potential of terrorist groups’ acquisition and use of a weapon of mass destruction.

Transnational organized crime syndicates are also a direct threat to U.S. national security since they challenge state power from beneath—they assume the role of the state at local levels by enforcing their own code of conduct, entering into illegal contracts and using violence to guarantee their private interests.7 The result is the diminishing of legitimacy and authority of core governmental institutions. Mafia violence of the Al Capone era should not be confused with the “rapid growth and global reach that appear to have given transnational organized crime an unprecedented capacity to challenge states.”8

Beyond the drug trade, terrorism and organized crime, the outbreak of a pandemic in the United States would arguably pose a direct threat to the welfare of the American population. Although sustained and efficient human-to-human transmission of avian influenza has not yet taken place, its occurrence could result in over 140 million deaths worldwide and staggering economic losses.9 The most recent near human pandemic was the SARS outbreak in Asia between 2002 and 2003. While not directly threatening the U.S. population, it did demonstrate the potential for a pandemic to undermine the authority of a government. This outbreak had a seven to fifteen percent mortality rate and created fears in the Chinese government of a “Chinese Chernobyl” that would create the conditions for a popular outcry against the government to force greater openness.
Transnational Threats as Indirect Threats.

There is not universal agreement that transnational threats should be labeled a direct threat and placed high on the national security agenda. Although they can certainly challenge core U.S. interests, transnational threats create indirect effects that complicate, but do not have the potency to destroy the American homeland, wipe out the economy, or exterminate the writ of the U.S. Government. As such, they can only create second order effects that, while significant, do not jeopardize America’s ability to continue to exist as a nation-state.

Arguably, the drug trade and transnational criminal groups are indirect threats to U.S. national security. Criminals and drug smugglers generally seek to evade government authority rather than to directly confront it. While certain criminal groups, like the Russian mafiya, are exceptionally violent, they do not seek to replace the authority of the U.S. Government with their own. Corruption of public officials and law enforcement do undermine the authority of the government while drug use and associated criminality can be deleterious to public health and civil order. The extent of organized crime and illegal activities that penetrates legitimate institutions of government, society and the economy can be quite damaging. Drug trafficking alone requires the participation of members of legitimate professions—chemists, lawyers, accountants, realtors, and bankers. Such widespread involvement can jeopardize fundamental elements of the American way of life based on transparency and accountability of vital institutions.

Geo-strategically, transnational threats do have the ability to destabilize other nation-states that are key to U.S. interests. Drug violence in neighboring Mexico has risen sharply since the 1990s, includes former members of the Mexican military, and has spilled over into U.S. cities and towns along the border. Drug violence continues to plague Colombia, a country pivotal to the stability of Latin America. Russian organized crime has penetrated multiple levels of Russian society and has spread to a variety of nations. Such criminality threatens a central pillar of U.S. foreign policy—the expansion of democracy. One observer of the rise of transnational crime was forced to ask: “Can democracy be promoted in countries in which criminal networks are the most powerful political players?”

While the U.S. may be able to fend off the more serious consequences of transnational threats, more fragile countries are much more susceptible to greater damage. Research on civil wars and armed conflict in the 1990s revealed that “the pursuit of criminal agendas by warring parties is often difficult to distinguish from other objectives, supposedly of a more ‘political’ nature, that are commonly assumed to be driving conflict.” Such protraction of conflicts creates regional instability, exacerbates human rights abuses, and allows for the development of “brown areas” that are isolated from the power of legitimate governmental authority. The result may be a failed state that serves as a sanctuary for additional criminal activity and political violence. Such a state has been raised to the level of a direct threat due to its ability to harbor international terrorist groups. As President George W. Bush’s first National Security Strategy put it, “America is now threatened less by conquering states than we are by failing ones.”

Transnational Threats as Enablers of Direct Threats.

Another way to conceptualize transnational threats is to view them as enablers to more direct threats to the U.S. national security interests. In other words, adversaries can take advantage of the illicit global economy to earn money for their activities that challenge U.S. actions or work in collusion with criminal groups to procure expertise and material to attack the U.S. and its citizens. Participation in the international drug trade is especially empowering for many warring
groups that the U.S. confronts. The drug trade is seductive for many groups since it can be used as a weapon against the U.S. as well as a generator of profit. Reportedly, Hezbollah imports raw materials for heroin and cocaine production into Lebanon and sells the finished products to the U.S. and Western Europe as a way to continue its campaign against Israel and the West. The Taliban has engaged in heroin trafficking as a way to promote its insurgency against NATO forces. The result was that, in September 2006, it became statistically as dangerous for an American service member to serve in Afghanistan as it was in Iraq. Al Qaeda ran a number of criminal schemes to keep their operations financially viable. One member of Al Qaeda is wanted on federal charges for trafficking methamphetamine. After the attacks of September 11, 2001, Al Qaeda attempted to buy illegal diamonds from Liberian President Charles Taylor to shield its hard currency assets from seizure.

Rogue states can also be empowered by linking themselves to the illicit global economy. The North Korean regime is actively engaged in the production, distribution and sale of drugs as part of government policy coordinated by Central Committee Bureau 39. In fact, North Korean military personnel have been used to smuggle drugs for nearly 30 years. North Korean infiltration craft (manned by North Korean Special Operations Forces) have often been found in Japanese waters since the late 1990s engaged in “drug drops.” North Korean uniformed personnel have reportedly been involved in the transfer of illegal drugs both off the coasts of Japan and Taiwan.

Transnational Threats as Strategic Distractions.

Transnational threats and their effects may also be viewed as strategic distractions; they appear as exaggerations that pose nowhere near the same level of danger as conventional threats. By focusing so much attention to them, some argue policy makers overstate the threat at the expense of focusing limited time, attention, and resources on more pressing issues like rising powers, rogue states, and the competition for oil. There is also the danger of a self-fulfilling prophecy—raising transnational threats like terror groups or criminals to high levels of importance legitimizes these actors on the global stage in ways that they may not have been able to do themselves with their own resources or actions. Even “threats without threatners” becomes problematic for national security professionals. Placing pandemics on the security agenda has meant a more active role for the U.S. Department of Defense, a role that is added to an already crowded agenda for the U.S. military.

To hold the view that transnational threats are distractions is not to argue that they are unimportant, but that they should not be seen as residing in the province of national security. They are not in the realm of “high politics.” They belong where they always have, be they in the arena of law enforcement (for terrorism, drug trafficking), private business (for money laundering), or the scientific community (in the cases of pandemic and climate change). Corruption and crime are not so ingrained or widespread as to cripple the vital functions of the U.S. Government; the U.S. routinely scores low as a country in corruption indexes and the level of drug use and rate of drug related crimes has not significantly risen in the years the Office of National Drug Control Policy has been keeping records. Money laundering has not significantly eroded public confidence in U.S. financial institutions or the economy itself. Pandemics and the effects of climate change have been effectively managed by the current configuration of the institutions of government.

Responses to Transnational Threats.

However one chooses to prioritize transnational threats, responding to them requires a high level of interaction among a variety of actors in the U.S. and the international arena. Be they
viewed as direct threats, indirect threats, enablers or distractions, transnational threats require that responses be as complex as the threats to produce meaningful results. Ironically, since transnational threats seemingly undermine the sovereignty of states, confronting them will mean that the U.S. national security community must more fully integrate and harness the elements of its own national sovereignty — diplomacy, information, military, economics, financial, intelligence and law enforcement (DIMEFIL).

Since these threats are enmeshed in the process of globalization, the speed at which they move means that governments are always playing catch-up. For example, the multifaceted nature of criminal networks permits them to rapidly adapt to many of the countermeasures used by governments. Human trafficking is on the rise and uses many of the same routes and techniques as drug trafficking — one reason is that jail time for smuggling a person into the U.S. is less than for smuggling a load of marijuana. The legal system has not caught up to the practice, meaning that the risk is lower, but the profit is roughly the same and, therefore, the incentive is greater. Even seemingly innocuous laws that were designed to mitigate some of the damages the global economy can inflict also serve to empower transnational activities. After the signing of an agreement among several Pacific nations to place limits on tuna fishermen to avoid capturing dolphins in their nets, Chinese organized crime was able to take advantage of excess room in the holds of Taiwanese fishing vessels to smuggle people from Fujian (the Chinese province closest to Taiwan) to other vessels bound for the United States and other countries. Migrants became the new commodity.

For leaders of America’s armed services, transnational threats appear especially frustrating; for a number of reasons cited above they are resistant to one of America’s strongest instruments of power — military might. For example, it is difficult to wage war on a product (for example, drugs) or phenomenon (for example, terrorism). After all, an adversary should be able to fight back. While the U.S. Government is waging a War on Drugs, drugs are not fighting a war against the U.S. Government; and this is not because drugs declined to participate, but because drugs are not the sort of thing that could. Transnational threats are also frustrating for policymakers and strategists because there does not seem to be a point at which they can be said to be vanquished. Policy makers and strategists are more comfortable defining a particular goal or end-state for U.S. action. “It would not make sense to say, ‘at the moment we are fighting fascism (or poverty or drugs), but we hope at a future time we’ll be on better terms with fascism (or poverty or drugs) and the reason for fighting it will have gone away’.” Furthermore, as previously mentioned, tackling any particular transnational threat in a comprehensive way would be debilitating to the global order: “to declare war on [all] organized crime would in these conditions be more tantamount to writing a suicide note than embarking on a crusade.”

Although transnational threats are frustrating, elusive, and resilient, national security professionals are not powerless in the face of them. Such threats must be met with innovative, flexible and sustainable strategies. Depending on the specific transnational threat, the coordinated use of the elements of national power should be targeted to go after an organization, a product, a process, or a combination. Traditional approaches that focus purely at the level of the nation-state and holding a government responsible for transnational threats is of limited utility. While sovereignty implies the ability of a government to control affairs within its boundaries, some nation-states are more capable than others. As one scholar put it, “Afghanistan is not Sweden with bad roads.” While options like Foreign Internal Defense and nation-building should not be dismissed, adopting a broader perspective has greater strategic advantages. Adversaries must be viewed as “adaptive competitors” in ways that conventional adversaries are not. Adaptive competitors “address problems, change practices, and create identities in response to knowledge and experience, sometimes improving their performance and aiding their bureaucratic survival.” As such, they are able to exploit seams and respond more flexibly than traditional nation-states.
To tackle adaptive competitors, strategists must make them face disincentives like lessening demand, lowering profit margins, and raising risks. As such, a central feature any policy or strategy to deal with transnational threats will be cooperation in building new networks to track, monitor, and trace specific organizations, illicit markets, and global trends. Organized crime is not invincible. In fact, each time a criminal cartel has been attacked with the right resources, legal tools, and political determination, it has been defeated; the most important accomplishment has been to challenge and destroy the myth of invincibility among criminal cartels.

When it comes to threats without threateners, cooperation is still required. Networks of multinational, multilayered and established actors need to be put in place to prepare to mitigate the effects of pandemics and climate change. National public health systems are relatively new to human social organizations—it was only during the early 20th century that cities became self-sustaining and did not have to rely on healthy bodies coming from the countryside to replenish their populations. The global public health system is even younger and inherently more fragile, yet the tools of globalization can aid in strengthening this system. In many ways, efforts to combat the H5N1 bird flu pandemics were successful in tracking and tracing suspect poultry and taking action to cull flocks. These efforts have not led to any “cure,” but containment proved to be possible given the cooperative efforts of several actors in the international arena.

Maneuvering through an international security environment that is volatile, uncertain, complex and ambiguous means working through such diverse entities as the World Bank, World Health Organization, Interpol and multinational corporations in a coordinated way will become the norm for policy-makers and strategists when confronting transnational threats. The national elements of power must be used in multinational, multilayered, and sustained ways, and those charged with creating policy and strategy must develop the “kind of competitive intelligence that is now pervasive in the business world.” Transnational threats will continue to bedevil U.S. national security, as will designing successful policies and strategies to mitigate their effects. Such are the challenges for decisionmakers, military officers, and national security professionals in the era of globalization.

PART III

STRATEGIC ISSUES AND CONSIDERATIONS
Violent conflict among human beings is, unfortunately, one of the great constants in our history as a species. As far back as we can see, the human species has engaged in war and other forms of organized violence. But it is equally true that, as far back as human culture and thought have left written records, humans have thought about morality and ethics. Although cultures vary widely in how they interpret death and killing from a moral and religious perspective, every human culture has recognized that taking human life is a morally grave matter; every human culture has felt the need to justify taking of life in moral and religious terms.

In the modern world, a large body of ethical and legal thought attempts to limit, constrain and to establish criteria that sanction the use of violence in the name of the state and society. Through the mechanisms of the Hague and Geneva Conventions, the Charter of the United Nations, military manuals such as the U.S. Army’s “Law of Land Warfare,” and similar documents, modern governments and militaries attempt to distinguish “just war” and just conduct in war from other types of killing of human beings. Morally conscientious military personnel need to understand and frame their actions in moral terms so as to maintain moral integrity in the midst of the actions and stress of combat. They do so in order to explain to themselves and others how the killing of human beings they do is distinguishable from the criminal act of murder.

Attempts to conduct warfare within moral limits have met with uneven success. Many cultures and militaries fail to recognize these restraints, or do so in name only. The realities of combat, even for the best trained and disciplined military forces, place severe strains on respect for those limits and sometimes cause military leaders to grow impatient with them in the midst of their need to “get the job done.” In the history of the U.S. Army, events like My Lai in Vietnam show that even forces officially committed to just conduct in war are still capable of atrocities in combat—and are slow to discipline such violations.

Despite these limitations, the idea of just war is one to which the well-led and disciplined military forces of the world remain committed. The fact that the constraints of just war are routinely overridden is no more a proof of their falsity and irrelevance than are similar points about morality: we know the standard, and we also know human beings fall short of that standard with depressing regularity. The fact of moral failure, rather than proving the falsity of morality, points instead to the source of our disappointment in such failures: our abiding knowledge of the morally right.

Because of the importance of just war thinking, the general history, key provisions, and moral underpinnings of just war are things which every military person, and especially every senior leader, must understand and be able to communicate to subordinates and the public. It is important that senior leaders understand just war more deeply and see that the positive laws of war emerge from a long moral tradition which rests on fundamental moral principles. This essay will provide that history, background and moral context of ethics and war.

Background of Just War Theory.

Most cultures of antiquity attempted to place some restraints on war. All recognized that there are some causes of war which are justifiable and others that are not. All recognized that some persons
are legitimate objects of attack in war and others are not. All recognized that there were times,
seasons, and religious festivals, etc. during which warfare would be morally wrong or religiously
inappropriate.

The roots of modern international law come from one specific strand of thought emerging out
of Antiquity: the Christian Roman Empire that took shape after the conversion to Christianity of
the Emperor Constantine in the year 312 AD. Although there were important ideas of restraint in
war in pre-Christian Greek and Roman thought and, indeed, in cultures all over the world, it is the
blend of Christian and Greco-Roman thought that set the context of the development of full-blown
just war thinking over a period of centuries.

Christianity before this time had been suspicious of entanglement in the affairs of the Empire.
For the first several centuries of the movement, Christians interpreted the teaching of Jesus in the
Sermon on the Mount and other places quite literally, and saw themselves as committed to pacifism
(the refusal to use force or violence in all circumstances). Although many appreciated the relative
peace, prosperity and ease of travel the Empire’s military force made possible, Christians felt prayer
on behalf of the Emperor was the limit of their direct support for it.

Much changed with Constantine. For many, war fought on behalf of a “Christian Empire” was
a very different thing than war on behalf of a pagan one. Further, during the century following
Constantine’s conversion, the Empire began to experience wave after wave of invasion from the north,
culminating in the fall of the city of Rome itself in 410 AD—a mere 100 years after Constantine.

It was in that context that Christian thinkers, most notably St. Augustine, a doctor of the church
and bishop of Hippo in North Africa, first worked out the foundations of Christian just war thought.
History, Augustine argued, is morally ambiguous. Human beings hope for pure justice and absolute
righteousness. Augustine firmly believed that the faithful will experience such purity only at the
end of time when God’s kingdom comes. But until that happens, we will experience only justice of
a sort, righteousness of a sort.

What passes for justice will require force and coercion, since there will always be people who
strive to take more than their share, to harm and steal from others. In that world, the peacemakers
who are blessed are those who use force appropriately and mournfully to keep as much order and
peace as possible under these conditions. The military officer is that peacemaker when he or she
accepts this sad necessity. Out of genuine care and concern with the weak and helpless, the soldier
shoulders the burden of fighting to maintain an order and system of justice which, while far short of
the deepest hopes of human beings, keeps the world from sliding into complete anarchy and chaos.
It is a sad necessity imposed on the soldier by an aggressor. It inevitably is tinged with guilt and
mournfulness. The conscientious soldier longs for a world where conflict is unnecessary, but sees
that the order of well-ordered states must be defended lest chaos rule.

For Augustine and the tradition that develops after him, Just War is an attempt to balance two
competing moral principles. It attempts to maintain the Christian concern with non-violence and
to honor the principle that taking human life is a grave moral evil. But it attempts to balance that
concern with the recognition that, the world being what it is, important moral principles, and that
protection of innocent human life requires the willingness to use force and violence.

As it wends its way through history, the tradition of Just War thought grows and becomes
more precise and more elaborate. In that development, it faces new challenges and makes new
accommodations.

The Spanish in the New World, for example, were challenged to rethink the tradition as they
encountered and warred against indigenous populations. Are such wars, too, governed by moral
principles? Are all things permitted against such people? Or, it was seriously debated, are they even
people, as opposed to some new kind of animal? Through that discussion came an expansion of the
scope of Just War principles to populations that did not share common cultures.
After the Protestant Reformation, as wars raged throughout Europe in the attempt to restore religious unity to “Christendom,” some thinkers (most notably Hugo Grotius) argued that Just War must be severed from a distinctively Christian religious foundation. Human reason instead must provide a system for the restraint of war that will be valid despite religious difference, valid etsi deus non daretur, even if God did not exist! In other words, for Grotius and others, human reason is a commonality all people share, regardless of religious, ethnic, and cultural differences. That rationality, rather than revealed religion or religious authority, could suffice to ground moral thinking about war.

As a result of that “secularization” of Just War thinking in Europe, the foundation was laid for the universal international law of the present international system. As a result, the foundation was laid for that system in Natural Law (moral rules believed to be known by reason alone, apart from particular religious ideas and institutions) and in the jus Gentium, the “law of Peoples,” those customary practices which are widely shared across cultures. In current international law these accepted practices are called “customary international law” and set the standard of practices of “civilized nations.”

Since virtually all modern states have committed themselves by treaty and by membership in the United Nations to the principles of international law, in one sense there is no question of their universal applicability around the globe. But the fact that the tradition has roots in the West and in the Christian tradition does raise important multicultural questions about it.

How does one deal with the important fact that Muslims have their own ways of framing moral issues of war and conflict and even of the national state itself which track imperfectly at best with the Just War framework? How does one factor into one’s thinking the idea of “Asian Values” which differ in their interpretation of the rights of individuals and the meaning of the society and state from this supposedly universal framework? What weight should the fact that much of the world, while nominally nation-states on the model established by the Peace of Westphalia in 1648 in Europe, are in reality better described as “tribes with flags”? How does one deal with the fact that, in much of the world, membership in a particular ethnic group within an internationally recognized border is more an indicator of one’s identity than the name of the country on one’s passport?

All of these questions are subject of intense scholarly debate and practical importance. All have very real-world applications when we think about the roots of conflict around the modern world and attempt to think about those conflicts in the ways many of the participants do. But for our purposes, we will need to set them aside in favor of making sure we understand the Just War criteria as they frame United States military policy and the existing framework of international law.

This limitation of focus is justified not only by the limitations of time, but also by legal reality. Whatever one might want to say about the important cross-cultural issues posed above, it remains true that the United States and its allies around the world are committed by treaty, policy, and moral commitment to conduct military operations within the framework of the existing Just War criteria. That fact alone makes it important that strategic leaders possess a good working knowledge of those criteria and some facility in using them to reason about war.

Ideally, however, strategic leaders will also have some grasp of the ongoing debate about cultural diversity and the understanding of war in fundamentally differing cultural contexts as well.

The Purposes of the Just War Framework.

The framework of principles, commonly called “Just War Criteria,” provides an organized schema for determining whether a particular conflict is morally justified. As one might imagine, any such framework will inevitably fall short of providing moral certainty. When applied to the
real world in all its complexity, inevitably persons of intelligence and good will can and do disagree whether those criteria are met in a given case.

Furthermore, some governments and leaders lie. No matter how heinous their deeds, they will strive to cast their actions in just war terms to provide at least the appearance of justification for what they do. If hypocrisy is the tribute that vice pays to virtue, it is testimony to the moral weight of the just war principles that even the most extreme lies follow the shape of just war principles. Just war language provides the shape of the lie even the greatest war criminals must tell. Rare indeed is the aggressor or tyrant willing to declare forthrightly the real causes and motives of their actions.

The twin realities of real-world complexity and the prevalence of lying about these matters suggest the importance not only of knowing the just war criteria as a kind of list, but also of skillful and careful reasoning using the just war framework as a strategic leader competency. Only if a leader is capable of careful and judicious application of just war thinking can he or she distinguish valid application of just war thinking from specious and self-serving attempts to cloak unjust action in its terms.

The Just War Framework.

Moral judgments about war fall into two discrete areas: the reasons for going to war in first place, and the way the war is conducted. The first is traditionally called *jus ad bellum*, or justice of going to war, and the second *jus in bello*, or law during war. Two interesting features of this two-part division are that different agents are primarily responsible for each, and that they are to a large degree logically independent of each other.

Judgments about going to war are, in the American context, made by the National Command Authority and the Congress. Except at the highest levels where military officers advise those decision-makers, military leaders are not involved in those discussions and bear no moral responsibility for the decisions that result. Still, military personnel and ordinary citizens can and do judge the reasons given for entering into military conflict by those decision makers and make their own determinations whether the reasons given make sense or not. A morally interesting but difficult question arises concerning one’s obligations and responsibilities when one is convinced that recourse to war is not justified in a particular case.

Just conduct in war concerns the rules of engagement, choice of weapons and targets, treatment of civilian populations and prisoners of war and so forth. These concern the “nuts and bolts” of how the war is actually conducted. Here the primary responsibility shifts from the civilian policymakers to the military leadership at all levels. Of course political leaders and ordinary citizens have an interest in and make judgments about how their troops conduct themselves in war. Militaries conduct themselves in light of national values, and must be seen as behaving in war in ways citizens at home can accept morally.

Modern war, usually fought in plain sight of CNN and other media, is for good and for ill especially subject to immediate scrutiny. Political leaders and ordinary citizens react to virtually every event and require of their leaders’ explanations for why they do what they do and conduct war as they do. This fact, too, indicates why strategic leaders must be adept in explaining clearly and honestly the conduct of their forces within the framework of the Just War criteria.

I turn now to a discussion of the criteria of Just War in some detail. These are the “tests” one uses to determine the justification of recourse to war in particular circumstances.

We begin with the criteria for judging a war just *ad bellum* (in terms of going to war in the first place). In detail lists of these criteria vary somewhat, but the following captures the essential elements:
• Just Cause
• Legitimate Authority
• Public Declaration
• Just Intent
• Proportionality
• Last Resort
• Reasonable Hope of Success.

Recall that the moral impulse behind just war thinking is a strong sense of the moral evils involved in taking human life. Consequently, the *ad bellum* tests of just war are meant to set a high bar to a too-easy recourse to force and violence to resolve conflict. Each of the “tests” is meant to impose a restraint on the decision to go to war.

**Just Cause** asks for a legitimate and morally weighty reason to go to war. Once, causes like “offended honor” or religious difference were considered good reasons for war. As it has developed, just war tradition and international law have restricted greatly the kinds of reasons deemed acceptable for entering into military confrontation. The baseline standard in modern just war thinking is *aggression*. States are justified in going to war to respond to aggression received. Classically, this means borders have been crossed in force. Such direct attacks on the territorial integrity and political sovereignty of an internationally recognized state provide the clear case of just cause, recognized in just war and in international law (for example, in the Charter of the United Nations).

Of course there are a number of justifications for war which do not fit this classic model. Humanitarian interventions, preemptive strikes, assistance to a wronged party in an internal military conflict in a state, just to name some examples, can in some circumstances also justify use of military force, even though they do not fit the classic model of response to aggression. But the farther one departs from the baseline model of response to aggression, the more difficult and confusing the arguments become.

As one moves into these justifications, the scope for states to lie and try to justify meddling in each others affair’s grows. For that reason, international law and ethics gives an especially hard look at claims of just cause other than response to aggression already received. To do otherwise risks opening too permissive a door for states to interfere with each other’s territory and sovereignty.

**Legitimate authority** restricts the number of agents who may authorize use of force. In the Middle Ages, for example, there was the very real problem that local lords and their private armies would engage in warfare without consulting with, let alone receiving authorization from, the national sovereign.

In the modern context, different countries will vary in their internal political structure and assign legitimate authority for issues of war and peace of different functionaries and groups. In the American context, there is the unresolved tension between the President as Commander in Chief and the authority of Congress to declare war. The present War Powers Act (viewed by all Presidents since it was enacted as unconstitutional, but not yet subjected to judicial review) has still not clarified that issue. But while one can invent a scenario where this lack of clarity would raise very real problems, in practice so far the National Command Authority and the Congress have found pragmatic solutions in every deployment of American forces.

The **public declaration** requirement has both a moral purpose and (in the American context) a legal one. The legal one refers to the issue we were just discussing: the role of Congress in declaring war. As we all know, few twentieth-century military conflicts in American history have been authorized by a formal Congressional declaration of war. While this is an important and unresolved Constitutional issue for the United States, it is not the moral point of the requirement.
The moral point is perhaps better captured as a requirement for delivery of an ultimatum before initiation of hostilities. Recall that the moral concern of just war is to make recourse to armed conflict as infrequent as possible. The requirement of a declaration or ultimatum gives a potential adversary formal notice that the issue at hand is judged serious enough to warrant the use of military force and that the nation is prepared to do so unless that issue is successfully resolved peacefully immediately.

The **just intent** requirement serves to keep the war aims limited and within the context of the just cause used to authorize the war. Every conflict is subject to “mission creep.” Once hostilities commence, there is always the temptation to forget what cause warranted the use of force and to press on to achieve other purposes—purposes that, had they been offered as justifications for the use of force prior to the conflict, would have clearly been seen as unjustifiable. The just intent requirement limits war aims by keeping the mind focused on the purpose of the war. Although there are justified exceptions, the general rule is that the purpose of war is to restore the *status quo ante bellum*, the state of affairs that existed before the violation that provided the war’s just cause.

**Proportionality** is a common sense requirement that the damage done in the war should be worth it. That is to say, even if one has a just cause, it might be so costly in lives and property damage that it is better to accept the loss rather than to pay highly disproportionately to redress the issue. In practice, of course, this is a hard criterion to apply. It is commonplace that leaders and nations are notoriously inaccurate at predicting the costs of conflict as things snowball out of control.

But here too, the moral point of just war criteria is to restrain war. And one important implication of that requirement is the demand for a good faith and well-informed estimate of the costs and feasibility of redressing grievances through the use of military force.

The requirement that war be the **ultima ratio**, the **last resort**, stems too from a commitment to restrict the use of force to cases of sad necessity. No matter how just the cause, and no matter how well the other criteria may be met, the last resort requirement acknowledges that the actual commencement of armed conflict crosses a decisive line. Diplomatic solutions to end conflicts, even if they are less than perfect, are to be preferred to military ones in most, if not all cases. This is because the costs of armed conflict in terms of money and lives are so high and because armed conflict, once begun, is inherently unpredictable.

In practical reality, judging that this criterion has been met is particularly difficult. Obviously, it cannot require that one has done every conceivable thing short of use of force: there is always more one could think to do. It has to mean doing everything that seems to a reasonable person promising. But reasonable people disagree about this. In the First Gulf War, for example, many (including Colin Powell) argued that more time for sanctions and diplomacy would be preferable to initiation of armed conflict.

The last requirement **ad bellum** is **reasonable hope of success**. Because use of force inevitably entails loss of human life, civilian and military, it is a morally grave decision to use it. The reasonable hope criterion simply focuses thinking on the practical question: if you’re going to do all that damage and cause death, are you likely to get what you want as a result? If you’re not, if despite your best efforts it is unlikely that you’ll succeed in reversing the cause that brings you to war, then you are causing death and destruction to no purpose.

An interesting question does arise whether heroic but futile resistance is ever justified. Some have argued that the long-term welfare of a state or group may well require a memory of resistance and noble struggle, even in the face of overwhelming odds. Since the alternative is acquiescence to conquest and injustice, might it justifiable for a group’s long term self-understanding to be able look back and say, “at least we didn’t die like sheep”?
This completes the overview of the *jus ad bellum* requirements of just war. Recall that the categories and distinctions of the theory are not simple and clear. Neither individually nor together do they provide an algorithm that can generate a clear-cut and obvious judgment about a particular war in the minds of all fair-minded people.

On the other hand, it is important not to overemphasize the difficulty here. Although the language of just war is used by virtually all states and leaders in the attempt to justify their actions, not all uses are equally valid. Often it is not that difficult to identify uses that are inaccurate, dishonest, or self-serving. While there certainly are a range of cases where individuals of good will and intelligence will disagree in their judgments, there is also a good range where the misuse is transparent.

Recall, for example, Iraq’s initial (and brief) attempt to justify its invasion of Kuwait on grounds that there had been a revolution in the Kuwaiti government and the new legitimate government of Kuwait had requested Iraq’s fraternal assistance in stabilizing the new government. Had this story been true, of course, Iraq would have been acting in conformity with international law and just war tradition by being in Kuwait. It is important to note that Iraq did apparently feel obliged to tell a tale like this, since that itself is a perverse testimony to the need of states to attempt to justify their actions in the court of world opinion in just war terms. Of course the story was so obviously false that even Iraq stopped telling it in a matter of hours. (How many of you even recall that they told it?)

My point in citing this example is to forestall an easy relativism. It is simple intellectual laziness to conclude, because these judgments are hard and people disagree about them in particular cases, that the principles have no moral force or, worse, that all uses of them are mere window-dressing. In all moral matters, as Aristotle pointed out, it is a mark of an educated person not to expect more precision than the matter at hand permits. And in complex moral judgments of matters of international relations, one cannot expect more than thoughtful, well-informed and good-faith judgments.

**Jus in bello.**

I turn now to the *jus in bello* side of just war thinking. As I noted above, except at the highest levels of the military command structure, officers do not make the decision to commit forces to conflict. The moral weight of those judgments lies with the political leadership and its military advisors. On the other hand, strategic military leaders, whether they are technically responsible for decisions to go to war or not, will often be placed in the position of justifying military action to the press and the people. Further, thoughtful officers will often feel a need to justify a particular use of force in which they participate to themselves. For all these reasons, therefore, facility with just war reasoning in both its dimensions (*jus ad bellum* and *jus in bello*) is a strategic leader competency.

The practical conduct of war is, however, the primary responsibility of military officers. They bear the responsibility for the training and discipline of military personnel. They issue the orders that determine what is attacked, with what weapons and tactics. They set the tone for how civilians are treated, how POW’s are captured, confined and cared for. They determine how soldiers who violate order and the laws of war are disciplined and what examples they allow to be set for acceptable conduct in their commands.

Because of this weight of responsibility, the officer at all levels must thoroughly incorporate thought about the *jus in bello* side of just war into standard operating procedure. It is an integral part of military planning at all levels, from the tactical issues of employing small units to the highest levels of grand strategy. United States policy, national and universal values, and political prudence combine to require officers at all levels to plan and execute military operations with a clear understanding of just war requirements.
The major moral requirements of just war *in bello* boil down to two: discrimination and proportionality. Together, they set limits in the conduct of war—limits on *who* can be deliberately attacked and on *how* war can legitimately be conducted.

Although we use the term “discrimination” almost wholly negatively (as in racial discrimination), the core meaning of the word is morally neutral. It refers to distinguishing between groups or people or things on the basis of some characteristic that distinguishes one group from another.

In the context of thought about war, the relevant characteristic upon which just war requires us to discriminate is **combatant status**. In any conflict, there are individuals who are combatants—actively engaged in prosecuting the war efforts—and there are noncombatants. The central moral idea of just war is that only the first, the combatants, are legitimate objects of deliberate attack. By virtue of their “choosing” to be combatants they have made themselves objects of attack and have lost that immunity from deliberate attack all human beings have in normal life, and which civilians retain even in wartime. I put “choosing” in quotes, of course, because we all know soldiers become soldiers in lots of ways, many of which are highly coerced. But they are at least voluntary in this sense: they didn’t run away. They allow themselves to be in harm’s way as combatants.

Of course, in modern war, there are lots of borderline cases between combatant and noncombatant. The definition of the war conventions is straightforward: combatants wear a fixed distinct sign, visible at a distance and carry arms openly. But in guerrilla war, to take the extreme case, combatants go to great lengths to blend in to the civilian population. In such a war, discrimination poses very real practical and moral problems.

But the presence of contractors on a battlefield, or combat in urban environments where fighters (whether uniformed or not) are mixed in with civilian populations and property (to point to only two examples) also make discrimination between combatants and noncombatants challenging both morally and practically.

It is less critical to focus on the hard case than on the central moral point. War can only be conducted justly insofar as a sustained and good faith commitment is made to discriminate between combatants and noncombatants and to deliberately target only the combatants.

Of course civilians die in war. And sometimes those deaths are the unavoidable by-product of even the most careful and conscientious planning and execution of military operations. Intelligence may be mistaken and identify as a military target something that turns out to be occupied by civilians or dedicated only to civilian use. Weapons and guidance systems may malfunction; placing weapons in places they were not intended to go.

Just war recognizes these realities. It has long used the “principle of double effect” to sort through the morality of such events and justifies those which, no matter how terrible, do not result from *deliberate* attacks on civilians. Such accidents in the context of an overall discriminate campaign conducted with weapons that are not inherently indiscriminate are acceptable as “collateral damage.”

What is *not* acceptable in just war thinking is the deliberate targeting of civilians, their use as “human shields,” or use of indiscriminate warfare on populations. In practice this means choosing weapons, tactics and plans which strive to the limit of the possible to protect innocent civilian populations, even if they place soldiers at (acceptably) greater risk.

The other major requirement of *jus in bello* is **proportionality**. It, too, attempts to place limits on war by the apparently common-sense requirement that attacks be proportionate to the military value of the target. Judgments about these matters are highly contextual and depend on many dimensions of practical military reality. But a massive bombardment of a town, for example, would be disproportionate if the military object of the attack is a single sniper.

It is true, of course, that all sides violated these rules in World War II, especially in the uses of airpower. But the development of precision munitions and platforms for their delivery have, since
that conflict, allowed the U.S. military to return to more careful respect for the laws of war, even in air war. Furthermore, it is a testimony to the moral need to do so that, at least in part, drove that development—along with the obvious point that munitions that hit what they’re aimed at with consistency and regularity are more militarily effective as well.

Contemporary Challenges to the Westphalian Model of Just War.

Recent history has put considerable pressure on the understanding of Just War described above. From World War II forward, a growing body of human rights and humanitarian law has evolved which, at least on paper, restrains the sovereignty of states in the name of protecting the rights of individual citizens. The Genocide Convention, for example, sets limits to what states may do to their own citizens and creates the right (and perhaps the obligation) of states to intervene to protect the rights of individuals when their violation rises to an unacceptable (and unfortunately, somewhat vaguely specified) degree.

The conflict in Kosovo was clearly an example of intervention by NATO into the “internal affairs” of Serbia (recall: Kosovo was an integral part of Serbia in the policy of all the states involved). Very little of the national interest of the NATO powers, narrowly conceived, was involved in Kosovo. It was a case where humanitarian causes and human rights were cited to “trump” Serbian sovereignty. Further, it was not authorized by resolution of the UN Security Council, to a large degree because the Chinese and the Russians feared the “porous sovereignty” precedent it would set.

Conversely, the failure to intervene in Rwanda was widely cited as a case where humanitarian concerns ought to have overridden sovereignty and national interest questions.

These examples point to one large and unresolved issue in contemporary international ethics and law: the harmonization of state sovereignty with issues of human rights and humanitarian intervention.

Another even deeper challenge is posed by the Global “War” against Terrorism. The term “war” is in quotations, of course, because in many respects the nature of the conflict with al Qaeda and similar terrorist groups of global reach departs markedly from the model of war between Westphalian sovereign states. Most obviously, terrorist groups are not state actors, so many of the conventions governing conflict between states imply imperfectly at best.

Of course unless terrorist groups are in international waters or in space, they necessarily exist in some relationship to states. Some states deliberately and consciously sponsor and encourage them; others harbor them unknowingly and perhaps even unwillingly; still others would like nothing better than to be rid of them, but have weak or nonexistent governments with the capability to dislodge them.

For states that deliberately harbor them, no great stretch is required to extend the Westphalian paradigm to cover such cases. At some point the existence of a threat within the border of such states that the government is disinclined to rein in constitutes a just cause of war between the United States and its allies and the harboring state. One way of construing the conflict in Afghanistan is precisely this: that the Taliban government wished to shelter and protect al Qaeda on its territory and, after sufficient warning, placed its own continued existence in jeopardy.

For states that lack the power to dislodge terrorist groups, if they can be persuaded to request assistance from the U.S. or other powers to dislodge them, even if that “persuasion” results from considerable pressure, the formalities of the current international system are maintained.

But other possibilities present themselves. On one interpretation of the Bush Administration’s National Security Strategy, the nature of the terrorist threat, combined with the possible destructive power of WMD, warrants abandoning the “just cause” restriction to aggression received in favor of a more aggressive “preemptive” (or, perhaps better, “preventative”) use of military force. If
this indeed becomes policy and customary international law, it might take one of two forms. It might be a simple assertion of U.S. military supremacy and lead to a fundamental recasting of the Westphalian assumption of the equality of sovereign states.

On the other hand, the nature of the threat might also lead to a reformulation of a common understanding of “terrorism” among the major powers that generates a multilateral agreement, implicit or explicit, that some threats warrant interventions that might not pass the inherited “just war” tests of recent centuries. In that respect, just war would be returning to it origins: rather than seeing war as a conflict among sovereign states in response to aggression, the international community might see itself once again (as Augustine did in the 5th Century) as defending a “tranquility of order” in the international system against incursions of alien systems and ideologies whose sole purpose is a disruption and displacement of that order. In other words, the globalized civilization grounded in democracy, human rights, free trade and communication, technology and science may be defending its civilization itself against forces that seek its complete destruction.

These aspects of the contemporary scene more than any others point to the need to think about just war in deeper historical terms than simply international law, precisely because existing international law has been formed almost entirely in the European, post-Reformation and Enlightenment, Westphalian system. If the second interpretation of the GWOT has some validity, the central point is precisely that those shared assumptions of the past several centuries may have less and less relevance, and the original concerns of defending the stability of a system of civilization against fundamental attack may be the better analog to present circumstances.

**Conclusion.**

The moral tradition of just war, and its partial embodiment in the laws of war at any moment is part of on-going evolution. They represent a drive to make practical restraints on war that honor the moral claim of individuals not to be unjustly attacked while at the same time recognizing that use of military force in defense of individuals and values is sometimes a necessity.

All military officers charged with the grave moral responsibility of commanding and controlling military units and weapons must, if they are to conduct war morally, have a good working knowledge of the just war tradition and of the moral principles it strives to enshrine.

Above all, strategic leaders who set large-scale military policy, control training and organizational culture, and supervise the preparation of operational plans for national militaries need to understand and think in ways deeply conditioned by just war principles. Because their responsibility is so great and because the weapons and personnel under their control are capable of causing such destruction, they above all bear the responsibility to insure that those forces observe the greatest possible moral responsibility in their actions.

No amount of knowledge of the terms and concepts of just war will make morally complex decisions miraculously clear. But clear understanding of the concepts of just war theory and of the moral principles that underlie them can provide clarity of thought and a way to sharpen one’s thinking about those choices. And in the rapidly changing international scene characterized by American military supremacy and non-state actor attack, it may be that we are entering into a rare fundamental shift in the understanding of the international system such as we have not seen in four centuries.

If our military is to conduct itself in war in ways compatible with American national values, and if individual soldiers and officers are to be able to see themselves and their activities as morally acceptable, they must be able to understand the moral structure of just conduct in war. Further, it is imperative that they integrate that understanding into the routines of decisionmaking in military operations.
In the Gulf War, and in major operations since then, the language and concerns of just war are integrated increasingly into planning and execution of military operations. Military lawyers are fully integrated into modern targeting and operations planning cells of the U.S. military. In light of those realities, facility in just war thinking is, indeed, a strategic leader competency. This chapter is only an introduction to the terms and grammar of that thought. True facility in just war thinking will come from careful and critical application of its categories to the complexities of real life and real military operations.
CHAPTER 15

ETHICS AND WAR IN COMPARATIVE RELIGIOUS PERSPECTIVE

David L. Perry

This chapter highlights a wide range of ethical views on killing and war in the world’s major religious traditions. One can learn a lot about a religion or culture simply by paying attention to how it answers the question, “Is it ever right to kill?” People raised within particular religious faiths are sometimes led to believe that their tradition has always held a consistent set of ethical principles. But what we find when we look closely at virtually any religious tradition are teachings that are at least paradoxical, and in some cases downright contradictory. Every major religious faith regards life (especially human life) as sacred in some sense, and affirms mercy and compassion as basic human obligations. But sacred scriptures and influential religious authorities have also taught that it is sometimes right to kill other human beings. Some have gone so far as to rationalize wars of annihilation against heretics and infidels.

Religion is clearly not the only catalyst of total war and other forms of indiscriminate violence. People seem to be able to invent all sorts of rationales for mass killing without feeling the need to cite the will of God. Some of the most appalling atrocities in history have been rooted not in religion per se but rather in racial or class hatred. (Think of the 20th-century victims of Hitler, Stalin, Mao, and Pol Pot.) There may even be a genetic tendency in our species, like that of our chimpanzee relatives, to attack and kill others for no reason except that they aren’t “one of us.”

But religious violence can take on a particularly intense and ruthless character, if the objects of that violence are seen as blaspheming or insulting God, and thus as enemies of God who must be humbled or destroyed. I am confident, though, that some ethical principles can be affirmed by all of the world’s major religions to limit violence, even when it can not—or should not—be prohibited completely.

Senior military, diplomatic and intelligence officials may profit from this essay in at least the following ways:

1. In recognizing the diversity of teachings within their own religion, especially its moments of violent intolerance of other faiths, they ought to be less likely to proclaim their country’s wars as divinely ordained crusades or jihads against enemies who might thus be denied basic rights.

2. In learning to appreciate certain ethical values and precepts in other traditions as similar to those of their own, they will be better able to support diplomatic initiatives between countries and cultures to reduce the likelihood of war and lessen its severity.

3. Specifically in “the battle for hearts and minds” in places like Afghanistan and Iraq today, they may learn ways to ally with moderate Muslims against murderous ideologies such as Al Qaeda.

Eastern Traditions.

One of the oldest living religions is Hinduism. The Hindu tradition reveres all of life, and affirms an ethical principle of ahimsa or avoiding injury to any sentient creature. This ethic has often led Hindus to adopt vegetarianism and strict pacifism, and has been especially strong in Buddhism and Jainism, both offshoots of Hinduism. The pacifist ethic nurtured by these faiths lives today among the followers of Mahatma Gandhi and renowned Buddhist teachers like the Dalai Lama of Tibet, Thich Nhat Hanh of Vietnam, and Maha Ghosananda of Cambodia.
Buddhism stresses the need for people to constantly be aware of how hateful and greedy emotions can arise in order to avoid being controlled by them and lashing out violently against others. Buddhism seeks to undermine social divisions like the Hindu caste system, while at the same time reinforcing its virtue of compassion and the obligation of non-injury. As a result, the duty not to kill people or other sentient animals applies to all Buddhists, though as an absolute duty it has often been restricted in practice to Buddhist monks and nuns. Similarly, a sacred Jain text says, “One may not kill, ill-use, insult, torment, or persecute any kind of living being. . . .” Former Burmese prime minister U Nu even renounced the use of force by the state, claiming that Buddhism “cannot sanction even such acts of violence as are necessary for the preservation of public order and society.”

How would pacifists within these faiths respond to a concern that nonviolence might have little or no persuasive effect on a violent enemy, and could result in the destruction of one’s community? Some would contend that violence only seems to be effective, but usually ends up merely producing more violence. Others would admit that nonviolence sometimes does not succeed in deterring or ending violence, but claim that success is not as important as doing the right thing. (The Christian pacifist John Howard Yoder made the same point in many of his books.)

Hindus and Buddhists believe in the Law of Karma, which rigorously enforces justice through an indefinite series of rebirths. So even if evil people succeed in their present lives, Karma will ensure that they’ll pay for it in their next life. Trusting in the Law of Karma can help to motivate adherents of these faiths to overcome selfishness and hostility and resist succumbing to violence. (This functions similarly to the Western belief in a heavenly reward for living a devout and moral life, even if one suffers great injustice during one’s earthly life at the hands of evil people.)

In practice, though, Eastern traditions often permit some exceptions to the general rule against killing. In mainstream Hinduism there is an entire caste of warriors, the Ksatrias, whose role in defending the community with force is considered to be just as important as that of the Brahmin or priestly caste. If a Hindu man is born into the warrior caste, he is obligated to kill enemy soldiers in defense of the community; his social role does not permit him to be a pacifist. He must kill with the proper disposition, though, without greed or anger. (Read the “pep talk” given by the god Krishna to the reluctant warrior Arjuna in the Bhagavad Gita.) Some Hindu gods like Indra are believed to have warlike characteristics themselves, and are praised for destroying the enemies of orthodox Hindu teachings and practices. So holy war is not entirely foreign to Hinduism. And some contemporary Hindus cite traditional warrior values in support of India’s possession of nuclear weapons.

On the other hand, total war in the sense of indiscriminate killing has typically been forbidden. Hindu soldiers are not to kill unarmed prisoners or civilians, apparently due in part to a sense of chivalry: it would be considered unprofessional for a Hindu soldier to harm defenseless people. (Similar values of chivalry in the West helped to ground the modern principle of noncombatant immunity. Chinese strategist Sun Tzu also stipulated, “The king’s army does not kill the enemy’s old men and boys; it does not destroy crops. . . . In carrying out punitive expeditions, it does not punish the common people.”)

Some Buddhists have argued that killing can be justified in rare cases as the lesser of evils, if the Buddhist community or other innocent people are threatened by violent attackers, and if nonviolent means of persuasion and protest have not succeeded. Interestingly, even when war might be waged with just cause and as a last resort, Buddhists still regard it as inherently sinful; so just warriors might nonetheless expect to undergo karmic punishment. (Medieval Christians held a similar view, requiring all soldiers to perform penitential acts upon their return from war; see below.)

We should not infer, though, that Hindus and Buddhists have never engaged in total war or other indiscriminate killing. Many of their leaders have openly advocated aggressive violence
against people of competing religions. Zen Buddhism was distorted in Japan to support a ruthless warrior ethic before and during WWII. Some Buddhists in Sri Lanka have promoted the “ethnic cleansing” of Hindu Tamils from the island. An influential Thai monk claimed in the 1970s that killing communists would actually produce karmic merit. And the man who assassinated Gandhi in 1948 was a member of a radical Hindu sect that opposed any political compromise with Islam or other faiths. But of course it is very difficult to see how such things can be justified in light of their religion’s core values.

In the Western monotheistic religions of Judaism, Christianity and Islam, we also encounter a mixture of moral values—some restraining war, others promoting it. I think it is fair to say, though, that the problem of total war has been more frequent in these faiths than in Eastern traditions, due to a more intense fear of unorthodox beliefs and idolatry (i.e., the worship of false gods).

Judaism.

Frequently in the Hebrew Bible (or what Christians call the Old Testament), love of one’s neighbor is said to be a fundamental duty; in fact, love is to extend beyond one’s religious or ethnic kin to include resident aliens as well (Leviticus 19:17-18, 33-34). Murder and other forms of unjust violence are forbidden (Exodus 20:13).

The primary moral arguments underlying or reflected in those commandments appear to be: (1) God is loving; so imitate God’s love; (2) God has shown mercy to you; so show gratitude to God by being merciful to others; and (3) human beings are created in God’s image; so treat them as such. (See Psalm 145:8-9, Micah 6:8, and Genesis 1:26-27, 9:6). If we considered those ideas in isolation from some other biblical values and commandments, we might derive an ethic of strict pacifism toward human beings, an absolute duty not to kill people, since killing even a murderous attacker might be regarded as a kind of sacrilege as well as contradicting love.

But that’s apparently not what the ancient Hebrews believed, since murder and other serious offenses (Exodus 21-22) were subject to capital punishment, i.e., a form of intentional killing. Genesis 9:6 says, “Whoever sheds the blood of a human, by a human shall that person’s blood be shed; for in his own image God made humankind.” I would interpret that to mean, “All persons have a basic right not to be killed, rooted in their having been created in God’s image; but they can forfeit that right if they commit a serious enough offense.”

So far, this would only permit those who are guilty of certain crimes to be executed, i.e., strict retributive justice. Deuteronomy 24:16 states, “Parents are not to be put to death for their children, nor children for their parents; each one may be put to death only for his own sin.” In addition, if this ethic permitted war at all, it would seem to limit it to the defense of the innocent against unjust invaders, or in punishment of their atrocities.

But collective punishment and indiscriminate war were also commanded or approved in the Hebrew Bible, especially in cases of idolatry. The first of the Mosaic commandments prohibited the Israelites from worshipping anyone but Yahweh. God demanded purity and strict obedience; idolatry and blasphemy were punishable by death (Exodus 20:3, 5). Non-Israelites who lived within the area believed by the Hebrews to have been promised to them by God were seen to pose a great temptation to them to abandon their faith. This led them to rationalize the slaughter of entire communities, in some of the most chilling passages in the Bible. Deuteronomy 20:16-18 says, “[In] the towns of the nations whose land the LORD your God is giving you as your holding, you must not leave a soul alive. . . . [Y]ou must destroy them . . . so that they may not teach you to imitate the abominable practices they have carried on for their gods. . . .” Joshua 6:21 and 10:40 claim that “[Joshua’s army killed everyone in Jericho], both men and women, young and old, oxen, sheep, and
donkeys. . . . Joshua defeated the whole land. . . he left no one remaining, but utterly destroyed all that breathed, as the LORD God of Israel commanded.”17

Israel’s external enemies were to be treated somewhat more leniently: they were first to be presented with peace terms, and if those were accepted then the people would be subjugated, not killed. But if they rejected the terms, the men would be slaughtered and the women and children enslaved (Deuteronomy 20:10-15). In those respects the Hebrews were little different from other ancient cultures.

The later rabbinic commentators who compiled the Talmud relegated wars of annihilation and other indiscriminate killing solely to the specific divine commands connected with the ancient conquest of the Promised Land.18 But the Talmud also gave explicit permission for individuals to kill murderous pursuers, either in self-defense or in defense of others, based primarily on Genesis 9:6 (though that verse seems to apply only to a murder that’s already occurred). Maimonides even thought that killing could be required, in light of his reading of Leviticus 19:16, “Don’t stand idly by the blood of your neighbor.” Defensive war was permitted on those grounds as well, and required if the survival of a Jewish state were threatened. Pacifism was only recommended as a prudential option, when using force against oppression or invasion would likely result in significantly more harm to the community.19

Even when just cause for war exists, though, Maimonides and most other rabbis urged that nonviolent efforts to achieve justice and maintain peace be pursued first. If war begins, destruction should not exceed what is minimally necessary to achieve important military objectives. And innocent lives should be spared whenever possible.20

Drawing in part on those elements in the Jewish tradition, the contemporary Code of Ethics of the Israeli Defense Forces21 requires soldiers to use minimal force and to spare civilian lives, and also affirms the importance of respecting their dignity, property, values, and sacred sites. Clearly a war of annihilation like Joshua’s would not be permitted under the IDF Code.

But in practice the Code has not always been upheld in Palestinian areas occupied by Israel, nor during Israel’s wars with Lebanon in the 1980s and 2006. Israeli military force is not always discriminate or proportionate: whole families of individual terrorists have been punished collectively (e.g., their houses are bulldozed), and Palestinian civilians intimidated and humiliated on a daily basis. Of course, many Jewish people in Israel and elsewhere have criticized these tactics on moral grounds, drawing upon centuries of Talmudic affirmations of compassion and respect for human dignity.22

Christianity.

One question that has been the subject of considerable debate in this religious tradition is whether Jesus was a pacifist, in other words, whether he prohibited violence absolutely. Some passages in the Gospels seem to clearly imply that, but others are more ambiguous.

Matthew chapter 5 reports Jesus as saying: “You have heard that it was said, ‘An eye for an eye and a tooth for a tooth.’ But I say to you, Do not resist an evildoer. [I]f anyone strikes [or slaps] you on the right cheek, turn [and offer him] the other also. . . . You have heard that it was said, ‘You shall love your neighbor and hate your enemy.’ But I say to you, Love your enemies and pray for those who persecute you.” These sayings seem to imply a strict rule of nonviolence.

By contrast, when Jesus spoke with Roman soldiers, he did not recommend that they abandon their profession in order to serve God (Luke 7). Now an argument from silence is logically weak, but it is puzzling how Jesus would have reconciled the military profession with nonresistance to evil and love of enemies. The Gospels further portray Jesus as using some degree of intimidation or
force to eject the merchants from the Temple in Jerusalem (John 2:13-16). There’s also a story where Jesus seems explicitly to permit his disciples to carry swords, and by implication to use them in self-defense, though that passage appears only in Luke 22 and is very mysterious. The apocalyptic book of Revelation even imagines the returning Christ as a mighty warrior, “just in war” and wielding “a sharp sword to smite the nations.” But how can such passages be squared with Jesus’ pacifist precept, “Do not resist an evildoer”?

Similar puzzles emerge from the stories of Jesus’ arrest. The four Gospels agree that when Jesus was arrested by an armed group, one of his disciples drew a sword and wounded a servant of the high priest. But the Gospels differ about what was said during that incident:

In Mark’s version of the story (14:43-52), Jesus says nothing to the disciple who inflicts the wound. Mark’s gospel is thought by scholars to be the earliest of the four, and probably familiar at least to the writers of Matthew and Luke. But only Mark’s gospel suggests that Jesus was silent at this point. Perhaps Mark meant to imply that Jesus was rendered speechless at the sight of one of his disciples lashing out violently, but we can’t know for sure.

In Luke’s account (22:47-51), alone among the gospels, Jesus’ disciples first ask him, “Lord, should we strike with the sword?” But Jesus doesn’t respond before one of them cuts the servant’s ear off. (Perhaps he wasn’t given enough time to reply.) Then Jesus says simply, “Stop! No more of that!” In Luke’s version there’s only that brief command, with no supporting reasons given. It might reflect an abhorrence of violence in general. But we might wonder why Luke’s Jesus would permit his disciples to carry swords just a few verses earlier, yet forbid their use here in his defense.

In John’s version of the arrest (18:3-11), the disciple who uses his sword is identified as Simon Peter, and the servant’s name is said to be Malchus. (In the other Gospels they’re nameless.) John quotes Jesus as saying to Peter, “Put your sword back into its sheath. Am I not to drink the cup that the Father has given me?” So John’s focus is on the need to permit Jesus’ divine mission to continue (which includes his arrest and crucifixion), not a specific opposition to violence per se. The contrast with Luke’s version is remarkable.

Matthew’s version of Jesus’ statement is lengthier and more complex than the others (26:51-54): “Suddenly, one of those with Jesus put his hand on his sword, drew it, and struck the slave of the high priest, cutting off his ear. Then Jesus said to him, ‘Put your sword back into its place; for all who take the sword will perish by the sword. Do you think that I cannot appeal to my Father, and he will at once send me more than twelve legions of angels? But how then would the scriptures be fulfilled, which say it must happen in this way?’” Note that Jesus gives at least two rationales in Matthew against the disciple’s use of his sword. One sounds like a piece of prudential advice: if you don’t want to be killed yourself, don’t use lethal weapons. (But then, wouldn’t the disciple respond, “I’m perfectly willing to die to protect you”?) But the other rationale, like John’s, might be restricted to this situation only: the disciple must not interfere with Jesus’ mission. We might also wonder, though, how the legions of angel “reserves” are consistent with pacifism!

In light of this puzzling combination of texts, how did the early Christian community answer the question of whether force could ever be morally justified? Many of them seem to have constructed a dual ethic, one for Christians and another for the state. I’ll use Paul, Tertullian of Carthage and Origen of Alexandria to illustrate this.

All three of those influential Christians interpreted Jesus’ teaching and example to prohibit all uses of force by Christians, not only in personal self-defense but apparently even in defense of other innocent people. Paul wrote to Roman Christians (ch. 12): “Do not repay anyone evil for evil, but take thought for what is noble in the sight of all . . . Beloved, never avenge yourselves, but leave room for the wrath of God.” Over a century later, Tertullian wrote that when Jesus rebuked the disciple who defended him at his arrest, in effect he disarmed every soldier. Tertullian explained to
Roman rulers that Christians believe it is better for them to be killed than to kill. And he stipulated that when soldiers convert to Christianity, they must leave the military. His contemporary Origen also claimed that Jesus prohibited homicide, so Christians may never kill or use violence for any reason.

But all three of those early Christians, in spite of their apparently pacifist stances, also seemed to think that God authorized the state to use lethal force for certain purposes. Paul wrote in Romans 13:

> Let every person be subject to the governing authorities; for there is no authority except from God, and those authorities that exist have been instituted by God. Therefore whoever resists authority resists what God has appointed, and those who resist will incur judgment. For rulers are not a terror to good conduct, but to bad. Do you wish to have no fear of the authority? Then do what is good, and you will receive its approval; for it is God’s servant for your good. But if you do what is wrong, you should be afraid, for the authority does not bear the sword in vain! It is the servant of God to execute wrath on the wrongdoer.

Similarly, Tertullian said, “We [Christians] pray . . . for security to the empire; for protection to the imperial house; for brave armies. . . .” And Origen claimed that although Christians won’t serve in the military, they offer “prayers to God on behalf of those who are fighting in a righteous cause . . . that whatever is opposed to those who act righteously may be destroyed.”

Note that the combination of views I’ve cited from Paul, Tertullian and Origen is internally inconsistent: It is not possible to rule out killing entirely, and then permit it on the part of the state. But it is important to recognize that those authors—and possibly most early Christians—thought strict pacifism to be the only acceptable ethic for followers of Jesus. In light of that, no contemporary Christian should simply assume that Jesus clearly approved of the use of violence, even in defense of the innocent. Killing enemies to protect one’s family, community or nation may be morally justified (perhaps on nonreligious grounds), but doing so may well contradict the ethic of Jesus.

A significant shift in Christian thinking about war occurred in the 4th and 5th centuries after Emperor Constantine began to use the Roman state to support the Church. According to an influential bishop named Eusebius, absolute nonviolence was from then on to apply solely to clergy, monks, and nuns; lay Christians could now be obligated to defend the empire with force. Ambrose, another important bishop of that era, thought that Christian love entailed a duty to use force to defend innocent third parties. He also shifted the focus of Christian moral concern from the act of violence to the attitude of the agent: Christian soldiers should love their enemies—while using deadly force against them!

Augustine, who was influenced by Ambrose in many ways, recognized that Jesus had taught things that seemed to entail strict nonviolence; but like Ambrose he believed that they applied to dispositions rather than to actions. Christians in his view are not only permitted to use force in defense of the community, they are obligated to obey such orders from higher authorities. Augustine also came to accept the use of force against heresy, believing it to be consistent with a benevolent desire of the Church to correct its wayward children.

However, Ambrose and Augustine also believed that there should be moral limits on Christian uses of violence. Even in cases where Augustine considered war to be the lesser of evils, he regarded all killing as ultimately tragic, always requiring an attitude of mourning and regret on the part of Christians. Partly due to his influence, throughout most of the medieval period, killing in war was considered a very serious sin. If a Christian soldier killed an enemy soldier, even in a war that was considered just, he would have to do penance for the killing, often by fasting and prayer for a year or more.
We can also see Christian roots of the modern principle of noncombatant immunity develop in the medieval period, when secular military ideals of chivalry combined with Christian decrees of protection for clergy, peasants, women, and others who usually did not take part in combat. Thomas Aquinas added another important ethical consideration in stipulating that Christians may only use the minimal force needed to save lives from unjust attack, an early version of the just-war principle of proportionality.

But the medieval period also witnessed the emergence of total war in the name of Christianity. First there was increasing glorification of the Christian knight, and identification of military courage and honor with Christian virtue. Consider how this German poem draws on John’s story of Jesus’ arrest:

Then boiled with wrath
The swift sword wielder
Simon Peter.
Speechless he,
Grieved his heart that any sought to bind his Master,
Grim the knight faced boldly the servants,
Shielding his Suzerain,
Not craven his heart,
Lightning swift unsheathed his sword,
Strode to the first foe,
Smote a strong stroke,
Clave with the sharp blade
On the right side the ear from Malchus.

(The glorification of Peter here is rather ironic, in that Jesus rebuked him for using his sword! But the poem no doubt stirred its audience to imagine that if they had been with Jesus at his arrest, they might have hoped to have the disciple’s courage and sense of moral outrage.)

Now by themselves, military courage and honor might help to reinforce limits on war conduct, e.g., in protecting noncombatants from gratuitous harm. But many of the traditional restraints on war advocated by the Church started to erode in the medieval period.

In the ninth century the Vatican declared that death in battle could be spiritually beneficial for Christian soldiers: their sins could be erased if they died in defense of the Church, and they would be guaranteed entry into heaven. (This is not unlike the assurances given to contemporary Muslim suicide bombers by recruiters from Al Qaeda, Hamas, etc.)

In the year 1095, Pope Urban II launched what later came to be called the First Crusade, urging European leaders to rescue the Holy Land from its Muslim occupiers. The Pope referred to Muslims as a “vile race” and an “unclean nation” that had polluted Christian holy places, and called for their destruction. Killing Muslims became in effect a way for Christians to obtain remission of their sins. Moral rules governing the conduct of war were abandoned. No one was immune from attack by Christian crusaders; whole cities were slaughtered. Even Jews in Germany were massacred by crusaders on their way to Palestine. Thus, ironically and tragically, a religion that began with the largely nonviolent teachings and example of Jesus evolved in its first millennium to the point where Christians were waging total, indiscriminate war against heretics and “infidels.”

In the wake of a series of devastating wars in Europe between Catholics and Protestants, some Christians like Francisco de Vitoria concluded that mere difference of religion should no longer be considered just cause for war. Most Christians today would find total war morally repugnant, of course, especially if waged in the name of God. Some even continue in the ancient path of pacifism in obedience to Jesus’ sayings on love of enemies and non-retaliation against evil. But total holy war against infidels also remains a continuing temptation for Christians.
Islam.

The Qur’an, the most sacred Muslim text, repeatedly refers to God as compassionate and just. It also insists that “there is no compulsion in religion” (2:256), meaning that authentic submission to God must be freely and sincerely chosen, not forced.\(^4\) (The word “Islam” means submission.) The Qur’an urges Muslims to use “beautiful preaching” to persuade people to accept Islam, and to “argue nicely” with Jews and Christians who are seen as worshipping the same God as their own (16:125, 29:46).\(^4\)

Those ideas taken in isolation might tend to preclude holy war, and perhaps even ground some form of pacifism. In fact, the Prophet Muhammad was said to have practiced non-violence during the first 12 years of his prophetic career, even in the face of serious persecution by polytheists in Mecca.\(^5\) The Prophet’s stance during that early Meccan period eventually served as the model for a nonviolent Islamic movement in 20th-century Afghanistan led by Abdul Ghaffar Khan, a friend and admirer of Gandhi.\(^6\)

But after the Prophet’s emigration to Medina in 622, he came to believe that God permitted and even commanded the use of force in defense of his growing religious community. Qur’an 22:39-40 says, “Permission is given to those who fight because they have been wrongdoing . . . unjustly expelled from their homes only because they say, ‘Our Lord is Allah’.”\(^7\) Like the Hebrew Bible, the Qur’an mandates capital punishment for certain offenses, though it also urges mercy and forgiveness in other cases. Muhammad often urged diplomacy rather than war to resolve disputes.\(^8\)

But certain verses in the Qur’an and other sayings of the Prophet seem to go beyond defensive and retributive uses of force to permit offensive jihad to expand the territory of Islam. Qur’an 9:5 says, “[K]ill the idolaters wherever you find them, and seize them, beleaguer them, and lie in wait for them in every stratagem (of war).” Qur’an 9:73 exclaims, “O Prophet! Strive against the unbelievers and the dissenters, and be ruthless with them.”

The word jihad, by the way, means struggle or effort. Jihad can refer to the struggle of the individual Muslim to conform his or her will to Allah’s, or to a peaceful effort to persuade others to accept Islam. But jihad can also mean holy war. In fact, there is a sense in which the only completely just war in Islamic terms is a holy war, since it has to be approved by proper religious authorities and waged to defend or promote Islam or the Muslim community.\(^9\)

So in spite of the Qur’anic statement against forcing religion on others, Muslim leaders have sometimes threatened to kill unbelievers if they did not accept Islam. Muhammad himself was said to condemn Muslims to death if they abandoned their faith. Some of the early Muslim raids out of Medina against trading caravans would be hard to interpret as strictly defensive. And although Islam spread to some parts of the world like Indonesia mainly by means of “beautiful preaching,” much of its expansion elsewhere was due to offensive war, first by Muhammad to unify Arabia, then by his followers in conquering the Middle East, North Africa, and so on. In fact, for many years the caliphs (Muslim political leaders) were expected to wage offensive jihad at least once a year!\(^10\)

However, Muhammad and his successors did establish some important moral rules for fighting holy wars: women, children and the elderly were not to be intentionally killed, though they could be enslaved. Monks, nuns and the disabled were also to be spared from execution after a battle. Muslim military leaders were able to draw upon some pre-Islamic principles of Arab chivalry against killing defenseless people.\(^11\) In other words, Islamic holy wars were never supposed to be total wars involving indiscriminate killing and scorched-earth tactics, in spite of what the contemporary leaders of Al Qaeda, Hamas or Hizbollah might say to the contrary.\(^12\)

On the other hand, Muslim leaders were explicitly permitted by Muhammad to kill all captured soldiers, and most adult male civilians if they were polytheists, or even if they were Jews or Christians.
but had fought instead of paying the poll tax. So Islam traditionally did not uphold a comprehensive principle of noncombatant immunity. Also, if civilians were likely to be killed in attacks on military areas, Muslim ethics permitted that as regrettable but necessary “collateral damage”—in fact, the moral blame rested entirely on the enemy leaders for putting their citizens in harm’s way.58

But many contemporary Muslim leaders strongly advocate noncombatant immunity, as well as a duty to minimize harms to civilians in otherwise legitimate military attacks, i.e., in bello proportionality. Such leaders have also condemned terrorism committed in the name of Allah, including the 9/11 attacks against the United States. For example, Abdulaziz Al-Ashaykh, the chief religious leader of Saudi Arabia, declared on September 15, 2001, “[T]he recent developments in the United States, including hijacking planes, terrorizing innocent people and shedding blood, constitute a form of injustice that cannot be tolerated by Islam, which views them as gross crimes and sinful acts.” Similarly, Muhammad al-Sabil, a member of the Saudi Council of Senior Religious Scholars, stated a few months later, “Any attack on innocent people is unlawful and contrary to shari’a (Islamic law). . . . Muslims must safeguard the lives, honor and property of Christians and Jews. Attacking them contradicts shari’a.”59

However, the contemporary challenge facing moderate Muslims to counter the misguided ethic of Muslim extremists can hardly be overestimated,60 especially in regard to the bizarre distortion of Islamic martyrdom in the growing cult of “suicide bombers.”61

Conclusions.

Tragically, some advocates of aggressive religious war can still be found today in all of the world’s major religions. What they cannot legitimately claim, though, is that their position is the authentic expression of their faith. Indeed, each of the traditions I’ve discussed contains ethical principles that are incompatible with total war. Furthermore, in order for members of those faith communities to continue to believe that God is compassionate and just, I think they must repudiate claims and values in their own scriptures and traditions that are incompatible with those ideas. It does not blaspheme or insult God to believe that God’s actions are limited by objective moral principles. To say that God would never condone or command total war, cruelty, or the intentional killing of innocent people does not represent a significant limit on God’s power.

Moreover, I think that people of many different faiths, as well as those of no religious faith, might concur with the following ethical principles and rules, though some will not be acceptable to strict pacifists:

1. All people have a prima facie right not to be killed. This right can only be forfeited if they intentionally try to kill innocent people, or while they are combatants in war.62
2. Given the immense destruction and loss of life that war usually brings, all nonviolent means of realistically achieving just objectives should be tried first.
3. War should only be waged when necessary to protect the rights and welfare of the innocent.
4. Innocent civilians should not be directly targeted.
5. Weapons and tactics should not be used against military targets in ways that are certain to cause civilian casualties, unless that is the only way to protect one’s own soldiers or civilians. Even then, harm to enemy civilians should be minimized.
6. Captured soldiers should not be tortured or summarily executed but treated humanely.
7. Each side should be held accountable for any atrocities committed by its military forces.

Similar principles and rules arose out of the western just-war tradition, and have been incorporated into international treaties like the Hague, Geneva and Torture conventions. But as I have tried to suggest in this essay, such principles are not unique to the West or to Christianity in
particular: every major religious tradition has developed comparable ones. It ought to be possible for people of all faiths to work in concert to implement such principles, without first having to agree on which views of God are best.

The just-war tradition rejects strict pacifism as insufficient to protect the innocent from unjust attack. But just-war rules, at least when applied in a careful and honest way, also guard against total war waged in the name of religion or any other cause. Religious communities can help to ensure that political and military leaders abide by these rules and inculcate respect for them in the training and management of soldiers. But just as importantly, faith communities can nurture firmly rooted habits and dispositions of compassion and nonviolence, reducing the likelihood and severity of war by dispelling the ignorance, fear and hatred that too often inspire and escalate it.63

ENDNOTES - CHAPTER 15

2. Although this question is foundational to the ethics of war, in that if the answer were a categorical “No” then war would be absolutely forbidden, the scope of the question clearly goes well beyond war. A comprehensive treatment of it would necessitate exploring capital punishment, euthanasia, abortion, meat-eating vs. vegetarianism, and so on.

6. As the ethic and example of each of those men suggests, pacifism should not be equated with passivity. Ferguson, pp. 36-40, helpfully summarizes Gandhi’s philosophy and practice of nonviolent civil disobedience. For a more extensive analysis, see Manfred Steger, Gandhi’s Dilemma: Nonviolent Principles and Nationalist Power, New York: St. Martin’s Press, 2000. Gandhi also had a strong influence on Martin Luther King, Jr. Many influential Buddhist leaders are described in Peter Harvey, An Introduction to Buddhist Ethics, New York: Cambridge University Press, 2000.

7. Harvey, ch. 6.

8. Ayaramgasutta, cited in Ferguson, p. 32.

12. Klostermaier; Ferguson, p. 31.

17. Many historians doubt that the ancient Hebrews actually engaged in many wars of annihilation against their neighbors; the book of Judges suggests that they tended more toward peaceful coexistence.

18. Reuven Kimelman, “Judaism, War, and Weapons of Mass Destruction,” in Hashmi and Lee, eds., 363-364. Theological questions about the consistency between indiscriminate war and God’s ethical character remained, of course: How could a loving and just God ever order the annihilation of whole communities? Even if adults were guilty of “abominable practices,” why would that justify killing their children and livestock as well?

22. For example, see the ethical principles advocated in Tikkun magazine’s “Core Vision” under the heading, “Peace, Justice and Reconciliation for Israel and Palestine,” www.tikkun.org/core_vision.

26. Against Celsus, www.newadvent.org/fathers/0416.htm; and Commentary on Matthew 26:47ff, www.newadvent.org/fathers/1016.htm. Lactantius, *Divine Institutes* VI/20, claimed that “it is always unlawful to put to death a man, whom God willed to be a sacred animal.” Thus, drawing from the creation story in Genesis 1, Lactantius differed from Genesis 9:6 in opposing capital punishment.

27. It is hard to conceive of a more conservative political philosophy than the one suggested here by Paul. Indeed, since he was himself persecuted by Roman authorities and knew that Jesus was executed by them, it’s difficult to imagine him sincerely believing that rulers are never “a terror to good conduct.” However, later Christians like Augustine who cited Romans 13 approvingly did not ponder such questions.

28. Apology.

29. Against Celsus.

33. Swift, 96-110. I doubt that the attitude expected of Christian soldiers by Ambrose and Augustine is psychologically possible in close combat.

34. See his Letter to Publicola, Against Faustus, Letter to Marcellinus, and Letter to Vincentius, all at www.newadvent.org/fathers/.

35. Duties of the Clergy.

36. Letter to Boniface.

38. Except for Origen of Alexandria whom I mentioned previously, I’ve ignored Eastern Orthodoxy here, partly because it does not have a tradition of careful just-war analysis like the West’s. Orthodox writers tend to use “necessary war” as a substitute for “just war,” even though that dangerously conflates many important ethical issues in jus ad bellum and jus in bello. See Paul Robinson, “On Resistance to Evil by Force: Ivan Il’in and the Necessity of War,” Journal of Military Ethics 2/2, 2003.

CHAPTER 16

INTERNATIONAL LAW AND THE NEW WORLD ORDER: REDEFINING SOVEREIGNTY

Thomas W. McShane

We have before us the opportunity to forge for ourselves and for future generations a new world order, a world where the rule of law, not the law of the jungle, governs the conduct of nations.

President George H. Bush

World events since 1648 have reflected the political, social, economic, and military aspirations of people organized into sovereign states. Increasingly, they reflect the influence and authority, both real and perceived, of international law, a development which has become evident since the end of the Cold War but whose roots go back much further. Recent international interventions in places as diverse as Kuwait, Somalia, East Timor, Haiti, and Kosovo, conducted under the auspices of the United Nations, regional organizations such as NATO, or by ad hoc coalitions, are shaped by a large and growing body of treaties, practice, and custom collectively referred to as international law.

Americans traditionally respect and support international law and have in fact been instrumental in its development for more than a century. At the same time, they become frustrated when international law restrains or limits the pursuit of national interests. This was vividly illustrated in the debates and reactions surrounding American-led efforts to compel disarmament or regime change in Iraq throughout 2002 and 2003. Regardless, its is essential that strategic leaders understand the global environment as it exists today. International law constitutes an important element of the geopolitical environment, one we ignore at our peril.

This chapter traces the development and evolution of international law, its principal components and characteristics, and its relative influence on international politics and events over time. It proposes that international law has evolved to a level where it competes with sovereignty as an organizing principal of international relations. Although sovereignty is likely to remain a critical component of the international system, it faces a growing threat from international organizations and institutions that pursue international order and individual rights at the expense of traditional rights enjoyed by sovereign states.

Conventional wisdom would hold that this phenomenon sprung to life after the collapse of the Soviet Union and the end of the Cold War in 1990. To the contrary, as this chapter will demonstrate, the “recent” ascendancy of international law represents major developments in religion, philosophy, and law over centuries, and is shaped by the catastrophic wars and associated excesses of the 20th century. Critical components of today’s international system matured in relative obscurity during the Cold War as groups and nations sought self-determination, peace, democracy, and individual freedoms. While it is easy for scholars and statesmen alike to overlook historical trends, we must examine how developments in international law have subtly but certainly redefined sovereignty and how states have adapted, or not adapted, to this reality.
FOUNDATIONS OF INTERNATIONAL LAW

The Search for Order.

Humans seek order in life. Religion traditionally reflects our search for meaning and purpose, but social institutions also reflect this desire. In ancient times, families organized themselves into tribes, then cities, states, and empires. Social order implies security and a sense of predictability. Order promotes prosperity and growth—both individual and collective. At the same time, order discourages destructive social behavior and competition for scarce resources. Order requires a degree of cooperation and sacrifice, and by definition some inherent limitation on individual freedom. The political process is the means usually used to create order and determine social rules and mores. Laws are crafted to facilitate and support this process.

Order may be imposed within groups or nations or states. On occasion, international order may be imposed by hegemonic powers, for example the Roman Empire, the British Empire at its height in the 19th century, and by American power since 1945. But scholars typically describe the international system as unstructured, or anarchic, in nature. States strive for supremacy, or hegemony, over other states. International politics is a “ruthless and dangerous business . . . [t]his situation, which no one consciously designed or intended, is genuinely tragic.” Others analyze the international system in different terms: the dynamic of how states establish international order e.g., balance of power, bipolar, or hegemonic systems; the nature of state actors as determining state behavior, e.g., democracies act one way, revolutionary states another, etc.; and the influence of individual decisionmakers, e.g., great men drive events—Churchill, Hitler, etc.

Rule of law is widely regarded as an independent basis of international order. The National Security Strategy of the United States tells us that the “nonnegotiable demands of human dignity” include “the rule of law; limits on the absolute power of the state; free speech; freedom of worship; equal justice; respect for women; religious tolerance; and respect for private property.” Establishing the rule of law was a stated objective of international efforts in Bosnia, Kosovo, and Afghanistan, among others. Efforts to establish rule of law in places such as Kosovo, and more recently Iraq, illustrate the tensions between international law and sovereignty which we will examine in detail later.

Defining International Law.

Law prescribes norms of proper behavior, or as Blackstone says in his Commentaries, “a rule of civil conduct, commanding what is right, and prohibiting what is wrong.” These rules may be prescribed by the sovereign, but they are usually based on religious, cultural, and moral values. As such, the law often depends upon voluntary compliance, or more precisely on social pressure to conform. Sanctions may be imposed in cases where individuals will not or cannot comply. Others feel that laws by definition require sanctions:

It is essential to the idea of a law that it be attended with a sanction; or, in other words, a penalty or punishment for disobedience. If there be no penalty annexed to disobedience, the resolutions or commands, which pretend to be laws will, in fact, amount to nothing more than advice . . . .

Regardless, law provides a foundation for order, stability, predictability, and enjoys general acceptance by the population at large. Laws not generally accepted, perhaps because they do not reflect widely-held beliefs or morals, or serve no constructive purpose, are often ignored, and prove
particularly difficult to enforce.\textsuperscript{8} Lastly, law evolves; it is not static. Laws change regularly, and considerably over long periods of time. While all this is true with respect to municipal or domestic law, does it apply equally to international law?

International law has been defined as “the body of rules and principles of action which are binding upon civilized states in their relations with one another.”\textsuperscript{9} Critics question, and we will examine later, whether international law can be “binding,” and the efficacy of its application outside its Western European incubator—the so-called “civilized” states. Yet a closer look reveals that international law plays an essential role in global trade and commerce, regulating disputes, compensation, banking, and laws applying to a given transaction. It is indispensable to international transportation, regulating sea and air routes, privileges and immunities, and claims for loss or damage.\textsuperscript{10} International treaties establish standards for the sciences, health, and the environment.\textsuperscript{11}

The law of war is most familiar to us as that branch of public international law regulating armed conflict between states, and increasingly within states suffering from civil war, or intrastate conflict. This body of law provided the foundation for the war crimes tribunals at Nuremberg and Tokyo following World War II, and later for the international tribunals organized to adjudicate war crimes and crimes against humanity in former Yugoslavia and Rwanda. Even more recently, the Rome Statute established the International Criminal Court, a standing, rather than ad hoc, tribunal which recently became operational and whose jurisdiction may be unlimited.\textsuperscript{12}

In most aspects, international law serves the same purposes as and shares common attributes with municipal law: it provides a foundation for order, is founded on religious, cultural, and moral values, serves to provide stability and predictability, and enjoys general acceptance among the international community. International law protects rights of states and individuals alike. In one important particular, however, the international legal system differs from municipal systems—there is no sanction for noncompliance, if by sanction is meant imposition of penalty by a higher authority. This theme recurs in any discussion of international law, although its relevance is often overstated.\textsuperscript{13}

\textbf{SOURCES OF INTERNATIONAL LAW}

\textbf{Classical Antecedents.}

Historians refer to the “laws” of ancient Greece and Rome and their influence on modern western institutions. Although recognizing that a sophisticated system of laws provided a foundation for order and stability, as well as for a wide-ranging commercial system that stretched from Britain to Asia Minor and ringed the Mediterranean, neither civilization understood the concept of international law as we apply the term today.\textsuperscript{14} Ancient Greeks, Romans, and Chinese did not customarily treat outsiders as their equals in an international system of equals. Greeks regarded non-Greeks as uncivilized; The Roman Empire didn’t negotiate acquisitions, it simply took them. The Chinese considered any group of peoples outside the “Middle Kingdom” as barbarians not worthy of their full attention.\textsuperscript{15}

\textbf{Natural Law, Feudalism, and Westphalia.}

Elements of modern international law existed before creation of the Westphalian system in 1648. Ancient philosophers, the Romans, and their heirs believed in “natural law,” a higher law of nature that controlled all human endeavors, and to which all are bound, even kings and rulers. An expression of this concept is found in the term \textit{ius gentium}, meaning a principle of universal
application that all follow because it has been independently discovered by application of reason, a “natural law.” Our contemporary use of the phrase “human rights,” examined in this context, becomes for us a form of natural law or *ius gentium*, and a fundamental principle of international order.16

Other elements of international order evolved during the Middle Ages, particularly concepts of property rights and loyalty to the sovereign, key elements of modern nation-states. Under feudalism, property rights of the ruler shaped feudal society, and dictated a network of complicated, but well-understood relationships that provided stability and order. Feudalism depended upon loyalty up and loyalty down the social hierarchy. All were bound by reciprocal responsibilities. While the Catholic Church provided legitimacy and support of feudal institutions, these principles survived the Reformation. The idea that states enjoy sovereignty and the right to control territory is a feudal legacy.17

Finally, following the self-destructive upheaval of the religious wars of the 16th and 17th centuries, the Treaty of Westphalia in 1648 provided needed order, stabilizing borders and relationships. Kings could dictate any religion they wished within their borders, but foreswore any rights to interfere in the religious affairs of other sovereign states. This principle was frequently violated for political, if not religious, reasons, but the Treaty achieved its purpose.

Once states became sovereign, a way had to be found for them to interact on a nominal basis of equality. Guiding principles of relations between sovereign states rested on five basic assumptions. States had the right to make laws, act independently in international affairs, control their territory and people, issue currency, and utilize the resources of the state. Sovereignty thus became the organizing element of modern history.

**INTERNATIONAL LAW HIERARCHY**

The sources of international law are divided into four categories, arranged in a hierarchy.18 At the top are conventions, treaties, and agreements, such as the United Nations Charter or the Law of the Sea Treaty. These represent contractual relationships between sovereign states, and states are bound by their obligations freely undertaken.19

The second source of international law is the practice of states, referred to as customary international law. No hard and fast rule governs customary international law. It reflects the behavior of states over time, acting in accordance with what they believe to be the dominant rules of international order. Customary law exists independently of treaty law, although treaty law may help to shape customary law.20

The third source is principles of law recognized by the leading, or so-called “civilized” nations. International politics help to define these principles, which are also shaped by the municipal law of states.21

The fourth and final source of international law represents judicial decisions and the writings of jurists and scholars. These include the opinions issued by the International Court of Justice, its predecessor the Permanent Court of International Justice, the European Court of Human Rights, and the International Criminal Tribunals for the Former Yugoslavia (ICTY) and Rwanda (ICTR). Writings of scholars supplement these decisions, illustrating and explaining the state of the law based on their experience and study. Changes in the law are often preceded by debate among jurists and scholars over what the law should be. Their authority is persuasive and influential, not substantive.22
INTERNATIONAL LAW AND SOVEREIGNTY—AN EVOLUTIONARY RELATIONSHIP

A Marriage of Convenience.

International law has never existed in a vacuum. It reflects existing norms and mores, and illustrates the difficulty of constructing international order in a disordered world. The Westphalian system has provided the fundamental framework for order for over three centuries and has greatly influenced the development of international law. Over time sovereignty has ebbed and flowed, as prevailing practices and international politics shaped the behavior of the leading states. To the extent these practices and politics establish binding precedent, they help to define international law.

This portion of the chapter examines how recognized principles of international law and sovereignty developed simultaneously over time. Although sovereignty has provided the dominant basis for international order, it has consistently adapted to accommodate evolving concepts of government, freedom, human rights, and the quest for predictability and stability, the historical attributes of international law.

Sovereignty and the Divine Rights of Kings.

Early models of sovereignty were based on the prevailing form of government in 17th century Europe—monarchies ruled by hereditary dynasties of kings or emperors. Consistent with historical political and religious practice, individuals were subordinate to the state, represented by the King. Other precedents existed, going back to classical Greece and its democratic ideals, but prevailing norms made Kings absolute rulers of their states, and they exercised their authority with little regard for the sensibilities of their subjects.

Contemporary writers described the nature of this relationship. Jean Bodin wrote in 1576 that law comes from the King, who although not bound by his own laws, was not above the law of nature, an important exception bearing on future developments. Thomas Hobbes wrote in Leviathan: “It appeareth plainly that the sovereign power . . . is as great as possibly men can be imagined to make it.” Louis XIV of France, the “Sun King,” epitomized the classical sovereign—not merely the head of the state, but its very embodiment, anointed by God to rule. Subjects owed unquestioningly loyalty to the King, who might or might not act in their best interests. More precisely, the King’s interests were the state’s interests. Hence the dynastic wars of Louis XIV, waged to expand the glory of France and of Louis XIV, were the business of the King and his advisors, not the people of France. As characterized in popular culture: “It’s good to be the King!”

Not everyone regarded sovereignty this way. Hugo de Groot, also known as Grotius, is referred to as the father of international law for his treatises on international law and the law of war. He was also a proponent of the law of nature and reason. He saw excesses in unbridled sovereignty:

I saw prevailing throughout the Christian world a license in making war of which even barbarous nations should be ashamed; men resorting to arms for trivial or for no reasons at all, and . . . no reverence left for divine or human law, exactly as if a single edict had released a madness driving men to all kinds of crime.

As the culminating act of the English Civil War and the Thirty Years’ War, the British throne of Charles I fell to the reformist Protestant armies of Oliver Cromwell. In 1649, 1 year after Westphalia, Cromwell had King Charles beheaded. Sovereignty was no longer coexistent with monarchy.
The Enlightenment and Age of Reason.

During the 18th century, philosophers, scholars and popular writers rediscovered the writings of the ancient Greeks, combining them with Christian philosophy and natural law into a doctrine of Enlightenment. Locke, Rousseau and Jefferson, among others, emphasized individual rights and the obligations of sovereigns toward their citizens. Their beliefs were incorporated into the Declaration of Independence and the American and French Revolutions.

The established order elsewhere did not change, but regime change in America and France, replacing monarchies with democratically-based governments, was a harbinger of things to come. It advanced the idea that sovereignty vested in the people, rather than in the government or the ruler, and demonstrated the efficacy of a higher law, themes that would resurface periodically in the 19th century and erupt in the latter half of the 20th. International agreements and treaties began to recognize that individuals as well as states have rights.

The Concert of Europe, Industrialism, and Colonialism.

Following the 25-year struggle to suppress Revolutionary France and Napoleon Bonaparte, the major powers of Europe in 1815 sought to reestablish order, stability, and a balance of power. In response to Napoleon’s imperial ambitions, the political leaders who met in Vienna created a system firmly grounded in sovereignty and balanced so as to preclude a return to revolution. Under the leadership of Prince Metternich of Austria and Lord Castlereigh of Great Britain, they succeeded in establishing a framework for peace that would survive essentially intact for 100 years.

Other influences shaped the 19th century. Charles Darwin’s scientific work on evolution stimulated development of a social philosophy known as social Darwinism, extrapolating Darwin’s theories of natural selection and survival of the fittest species into international relations and politics. Those nations which were strongest were most likely and best suited to survive. Social Darwinism heavily influenced political leaders such as Bismarck and Theodore Roosevelt. Sovereign states exerted a sort of muscular self-interest in their international relations, demonstrating their superiority by economic growth and territorial acquisition. The last great era of colonialism was the result, as France, Great Britain, and Germany competed to acquire overseas colonies. The United States too, succumbed to temptation at the end of the century, acquiring overseas interests in Hawaii, the Philippines, Cuba, and Panama, among others. The sovereign rights of underdeveloped, militarily weak states counted for little in this environment.

Facilitating economic expansion in an era of relative peace were the modern technologies of steamships, railroads, and telegraphs. The speed of communication and transportation caused the world to “shrink,” as trade, commerce, and banking connected the continents, creating the first era of “globalization.” The modern unified industrial state came into its own as the United States, Germany, and Italy consolidated their territorial boundaries and joined the ranks of the great powers. In many regards, it was the apogee of sovereignty.

At the same time other, largely unseen, developments reflected the dark side of unbridled sovereignty and hinted at issues that would rise to prominence in the 20th century. The industrial revolution prompted upward mobility and increased the size of the middle class in most western nations, yet it also created a new urban underclass, with associated problems of disease, family breakup, and child labor. Visible disparity in wealth and power in developed states caused socialism to flourish, creating revolutionary pressures that threatened the established order. Karl Marx promulgated his economic theories preaching class warfare. Modest political reform helped to defuse tensions and postpone the final accounting for at least another generation.
Public international law played an important role in international affairs, particularly through treaties regulating trade, communication, and finance. Henri Dunant founded the International Red Cross in Geneva in 1863 to mitigate the destructive effect of modern war. The first Geneva Convention covering treatment of sick and wounded on the battlefield was signed in 1864. Based largely on the Lieber Code of 1863, promulgating laws of war for Union armies in the American Civil War, the Hague Conventions of 1899 and 1907 attempted to prescribe means and methods of warfare consistent with existing humanitarian principles. Concerns over certain acts in the recent war with Iraq—use of civilian hostages, fighting from protected places such as hospitals or mosques, combatants not wearing military uniforms—can be traced directly to the Hague Conventions.

The 20th Century — Age of Conflict and Ideology.

The 20th century was marked by tremendous highs and abysmal lows. The best and the worst of human nature were on public display, often at the same time. The era was marked by three major world wars, two hot and one cold, and the clash of powerful ideologies. Socialism, Communism, Nazism, and Fascism emerged fully-grown on the world stage, competing with Democracy for primacy in the hearts and minds of nations. Tentative steps to form world government were taken. Natural law resurfaced in the guise of anti-colonialism, self-determination of peoples, the human rights movement, and demands for equality by the non-western world. Change accelerated development, redefining political and cultural priorities. The second great era of globalization and progress brought the world closer, yet left others even farther behind. The similarities between 1903 and 2003 are striking, as are the differences. The maturation of international law and sovereignty’s accommodation to change is one major highlight of the century that we will examine more closely.

The Great War — Changing of the Guard.

The period immediately following World War I is essential to understanding the rest of the 20th century. The issues facing the allied powers in Versailles, and the choices made then and over the next decade dictated the course of events for the remainder of the century. International law emerged as a critical component of international order and would play a major role in international politics.

World War I, The Great War, caused tremendous upheaval in the established order. The victorious allies attempted to address these problems at Versailles in 1919. First was the unexpected scope of violence and destruction, prompting calls for vengeance—war reparations to be paid by the losers and trials of those responsible for the conflict. Second was the collapse of major empires—the German, Austrian-Hungarian, and Ottoman Empires on the losing side, and the Russian Empire in 1917 on the allied side—and the emergence of the United States as the predominant military and economic power. The third problem was the creation of new nation-states out of the former empires. Lastly, lack of consensus concerning the goals of the war and what the allies had won plagued the peace and designs for international order.

Revolutionary efforts to create a world government fell short—the League of Nations was a start, but not a sufficient one. President Wilson’s visions for the postwar order clashed with the national interests of the allies and frustrated effective, unified action. The Versailles Treaty became a compromise. Complicating matters, Wilson failed to persuade the American public or the United States Senate to ratify the treaty creating the League of Nations, and, without American participation, the League proved too weak to enforce Wilson’s vision of collective security—peace through the rule of law supported by military force when necessary. Wilson’s vision would be revived in 1945 and again in 1990 with relatively greater success.
Attempts to try the Kaiser and others for War Crimes encountered similar problems. The allies could not agree, and the Germans would not cooperate. Ambitious plans drawn up at the Paris Peace Conference in 1920 called for some 900 war criminals to be tried, but allied disunity and German recalcitrance prevailed. As a compromise, 12 German soldiers ranging from Private to Lieutenant General were tried in German courts; six were convicted, with the most severe sentence being four years.43

One encouraging development at Versailles was public debate over rule of law and ethics superseding national interests and international politics. The conflict between these poles of international order would continue throughout the 20th century and still exists. As Kissinger characterizes it:

At the end of the First World War, the age-old debate about the relative roles of morality and interest in international affairs seemed to have been resolved in favor of the dominance of law and ethics. Under the shock of the cataclysm, many hoped for a better world as free as possible from the kind of Realpolitik which, in their view, had decimated the youth of a generation.44

Efforts to enforce peace through rule of law continued for over a decade following Versailles. Arms control agreements took the place of serious collective security enforcement. Examples include the Naval Conferences at Washington in 1922 and London in 1930, regulating the number and size of battleships, cruisers, destroyers, and submarines, then considered the major strategic weapons of the great powers.45 In the Kellogg-Briand Pact of 1928, the signatory parties agreed to renounce war as an instrument of national policy.46

In the end, sovereignty and national interests proved too strong for the Wilsonians. International law became just another diplomatic tool as the great states rearmed themselves for World War II. Former President Theodore Roosevelt, still a keen observer of world events, captured the essence of power politics when he said: “As yet there is no likelihood of establishing any kind of international power . . . which can effectively check wrong-doing . . . I regard . . . trusting to fantastic peace treaties, to impossible promises, to all kinds of scraps of paper without any backing in efficient force, as abhorrent.”47

SOVEREIGNTY IN THE NUCLEAR AGE

World War II and the Search for International Order.

The world got a second chance in 1945 to recreate international order. The unprecedented destruction of the second major war in a generation dwarfed that of 1914-18 and brought modern war to the home front with a vengeance. Millions of noncombatants became casualties of war. The discovery of nuclear fission at the end of the war threatened even greater destruction in any future conflict. Sovereignty had to be checked, and international law was applied to the task. The problem was neatly defined by one study:

A sovereign state at the present time claims the power to judge its own controversies, to enforce its own conception of its rights, to increase its armaments without limit, to treat its own nationals as it sees fit, and to regulate its economic life without regard to the effect of such regulations upon its neighbors. These attributes of sovereignty must be limited.48

The creation of the United Nations in 1945 and the proceedings of the Nuremberg Tribunal immediately following were watershed events that permanently altered the nature of the debate regarding a state’s right to wage war and its treatment of its citizens. Together they announced
to the world that aggressive war would no longer be tolerated and that individuals who commit aggression and crimes against humanity will be held criminally responsible for their acts. It was a sincere effort and a good start, enjoying almost universal support.

One of the United Nations’ early proclamations, the Universal Declaration of Human Rights, outlined fundamental human rights in terms reminiscent of the Declaration of Independence and the Bill of Rights. It was intended as common standard for “all peoples and all nations.” Although aspirational in tone and lacking an enforcement mechanism, it has served for more than 50 years as a beacon for people in search of freedom and justice. Over the following decades, international agreements outlawing genocide, recognizing the rights of minorities, and emphasizing humanitarian concerns consistently advanced individual rights at the expense of state sovereignty.

Collective security acquired new life after World War II with the creation of the United Nations, the North Atlantic Treaty Organization (NATO), the Organization of American States (OAS), and other international and regional organizations. Although the Cold War provided the initial impetus for NATO, it survives as a viable, productive organization. With expanded membership and new missions, NATO today provides collective security while extending democracy and prosperity to the nations of Eastern Europe, a development unimagined a generation ago.

The Rule of Law and Human Rights Center Stage.

The rule of law in international affairs is manifest in many ways: by actions of the United Nations Security Council and other UN organizations; by NGOs advancing collective western values and international humanitarian law; by treaties regulating strategic nuclear weapons, conventional weapons, and chemical/biological weapons; by international agreement on global warming; by creation of an international criminal court; and by the number of “coalitions of the willing” contributing forces to intervene in instate conflicts.

A common misperception is that these developments emerged all at once in 1990 with the collapse of the Soviet Union and the end of the Cold War. The incorporation of international law and human rights into international relations since 1945 stems from historical trends and events. It reflects timeless values, classical and modern philosophy, and the common experiences of mankind over centuries. Although it is true that the bipolar system and threat of great power veto limited the ability of the United Nations Security Council to take effective action throughout the Cold War, the quest for international order based on rule of law consistently influenced political developments and discourse.

The struggle to end colonialism and promote self-determination of peoples following World War II is illustrative. The UN Charter, firmly rooted in sovereignty, contemplated the end of Western colonialism. The United States advocated renunciation of overseas imperial holdings and supported self-determination. During World War II, in fact, our stance on this issue periodically created rifts within the Anglo-French-U.S. partnership. After the war, at the same time we were developing a Containment Policy against Communism, we were calling for an end to British and French rule in Africa and Asia. When newly independent colonial states lapsed into Communism, as happened in Vietnam, we suddenly found ourselves with a new problem on our hands, one as much political as military in nature. The search for order, justice, and democracy stumbled on the rock of great power politics. International law alone could not preserve the peace.

Cold War arms control agreements reflected not so much American and Soviet optimism as they did global public opinion, uneasy over the prospect of annihilation at the hands of the two superpowers. With the advent of intercontinental ballistic missiles, mutual assured destruction became a fact. With satellite technology, the U.S. and the U.S.S.R. acquired the capacity to place
nuclear weapons in earth orbit.\textsuperscript{61} Many states became fervent practitioners of international law for purely parochial reasons, but the success of the international community, particularly non-aligned states, in framing global debate demonstrated the force of western values and the rule of law. These trends emerged in the 1950s, and acquired prominence in the 1960s and 1970s. Neither the United Nations nor the international community could force the great powers to take specific actions against their interests, but this does not mean that the great powers, including the U.S. and USSR, were free to do as they pleased. Pressures to comply with world opinion were subtle and often invisible, but real nonetheless.

Contributing to the force of international law was the proliferation of nongovernmental organizations (NGOs) in the decades following World War II. NGOs pursued their own special interests, but most had an underlying humanitarian agenda, advancing the cause of human rights and promoting “International Humanitarian Law.”\textsuperscript{62} The International Committee of the Red Cross is the oldest and best-known of the NGOs.\textsuperscript{63} Human Rights Watch, Doctors without Border, CARE, and thousands of others effectively precipitated international intervention in what had been considered previously the internal affairs of sovereign states.\textsuperscript{64}

Two examples illustrate the power and influence NGO’s have acquired. The first is the UN intervention in Somalia in 1992, under American leadership, to ensure delivery of relief supplies and avert a humanitarian disaster forecast by NGOs and highlighted on television screens around the world. UN intervention alleviated the immediate problem, but failed to address the underlying problem of stability. When it did, too little and too late, it led to the battle of Mogadishu and eventual withdrawal of U.S. forces.

The second example of NGO influence is the Ottawa Treaty banning landmines.\textsuperscript{65} The preamble to the Treaty states in part:

\begin{quote}
Stressing the role of public conscience in furthering the principles of humanity as evidenced by the call for a total ban of anti-personnel mines and recognizing the efforts to that end undertaken by the International Red Cross and Red Crescent Movement, the International Campaign to Ban landmines, and numerous other nongovernmental organizations around the world, \textit{Basing} themselves on the principle of international humanitarian law that the right of the parties to an armed conflict to choose methods or means of warfare is not unlimited, \ldots
\end{quote}

NGOs and international celebrities like Princess Diana of Britain actively participated in the Conference process, dismissing security concerns raised by the United States. Humanitarian concerns over civilians killed or maimed by abandoned land mines preoccupied the Conference and carried the day. While not a party to the treaty, the United States has conceded substantial compliance by policy.\textsuperscript{67}

\textbf{THE STATE OF THE STATE– SOVEREIGNTY IN THE NEW MILLENNIUM}

\textbf{Trends and Developments.}

Trends evident in 2003 reflect the foregoing discussion. In advanced states, post-industrial society has replaced basic industry and manufacturing, which has migrated to less-developed countries with lower labor costs. Globalization draws nations and peoples closer, despite recent economic setbacks. The World Trade Organization is a powerful international force that influences decisions of the leading economic powers, including the United States.\textsuperscript{68} International labor organizations demand basic standards and benefits for workers and workplaces. These trends undermine sovereignty and reflect a tightly structured international environment that constrains even the strongest states to behave in ways promoting international order.
Human rights influence international agendas and domestic actions. International humanitarian intervention, evident in Kosovo, East Timor, and possibly Iraq, is an emerging precedent that demands attention. It is not yet customary international law, but lively debate on the subject tends to re-define how we view sovereignty. 69 This represents, ironically, the triumph of values advanced by Woodrow Wilson at Versailles almost a century ago. The principles of the American and French revolutions have become universal, though not all states concede that individual rights supersede the welfare of the state, most notably China, the world’s most populous state.

Themes for the 21st Century.

International law will play an important role in addressing issues and trends likely to persist for decades to come. The most important of these include: a globalized economy; urbanization; intrastate conflict; clash of cultures; unequal distribution of wealth; environmental degradation; transnational crime; collective security; multilateralism; and humanitarian intervention. Global problems require global solutions; sovereign states cannot solve them, although they can address symptoms within their borders. Most, eventually, will require international cooperation.

IMPLICATIONS FOR STRATEGIC LEADERS

International law challenges strategic leaders to think globally, not nationally. The positivist approach to international law expressed in the S.S. Lotus case: “Restrictions upon the independence of States cannot therefore be presumed,” 70 is threatened by a new paradigm: “a law more readily seen as the reflection of a collective juridical conscience and as a response to the social necessities of States organized as a community.” 71 United Nations Secretary General Kofi Annan articulated this new paradigm as follows:

State sovereignty, in its most basic sense, is being redefined—not least by the forces of globalization and international cooperation. States are now widely understood to be instruments at the service of their peoples, and not vice versa. 72

The implications of this principle are staggering. Yet Kofi Annan is no revolutionary; his language is reminiscent of Thomas Jefferson’s in the Declaration of Independence: “That to secure these rights, Governments are instituted among Men, deriving their just power from the consent of the governed.” States exist to promote and protect individual rights and freedoms. The challenge for international leaders is what action the international community should take in those cases where states deliberately and systematically violate the human rights of their citizens. 73

None of this implies that sovereign states cannot guarantee, promote and advance human rights. To the contrary, the American experience teaches us that individual rights and rule of law are mutually supportive and thrive in a strongly nationalistic, democratic environment. Ironically, the American experience also encourages internationalism in the promotion of democratic values. As President Bush has stated in his National Security Strategy: “We will defend the peace by fighting terrorists and tyrants. We will preserve the peace by building good relations among the great powers. We will extend the peace by encouraging free and open societies on every continent.” 74 This sentiment resembles Woodrow Wilson’s and, indeed, those of most presidents since 1918. Kissinger portrays this as an essential element of American altruism motivating our actions abroad: “Wilson put forward the unprecedented doctrine that the security of America was inseparable from the security of all the rest of mankind. This implied that it was henceforth America’s duty to oppose aggression everywhere . . . .” 75
The current world situation encourages debate over the scope and authority of international law. Recent American actions in Iraq, taken contrary to international public opinion, without the endorsement of the United Nations Security Council, and against the wishes of longstanding allies such as France, Germany, and Turkey, support Mersheimer’s proposition that great powers behave as their interests dictate. Perhaps sovereignty is alive and well after all. Unilateral action can, at least in certain cases, achieve the same results as multilateral efforts.

Proponents of international order and rule of law argue that lasting order cannot be imposed unilaterally. The Congress of Vienna in 1815, which created the “Concert of Europe,” was a collective, multilateral effort, albeit predicated on sovereignty. But it took enormous cooperation to maintain international order for a hundred years. Even the British Empire at its height in the 19th Century realized its limitations and attempted to construct a favorable balance of power. John Ikenberry, in After Victory, analyzes the rebuilding of international order after major wars. He says the diplomats of 1815 created a “constitutional order,” which are “political orders organized around agreed-upon legal and political institutions that operate to allocate rights and limit the exercise of power.”

Ikenberry’s concept of “constitutional order” helps to explain how the current international system evolved after World War II, and how it operates today. At its heart was the sharing of power by the United States, by far the most powerful state in the world in 1945. The framework was an extensive system of multilateral institutions, including alliances, which bound the United States and its primary partners in Europe together. The Cold War may have accelerated this process, but it did not create it.

If this theory is correct, then the primacy of international law and institutions is no accident, but instead the direct and expected result of efforts to create a framework of mutually supporting and binding ties. As we have seen, these international institutions have performed as designed. It should come as no surprise, viewing the international system in this way, that international organizations and politics restrain the choices and actions of sovereign states. From this perspective, international order displays many of the characteristics of municipal order. Ikenberry explains this: “if institutions— wielded by democracies—play a restraining role . . . it is possible to argue that international orders under particular circumstances can indeed exhibit constitutional characteristics.”

THE NEW WORLD ORDER AND AMERICAN HEGEMONY

Who Owns International Law?

What is America’s role as the sole superpower in the current environment? How will the international system respond to the threat of global terrorism? Can it maintain the security and prosperity created by American leadership since 1945? Can the rule of law accommodate the national interests of the great powers and protect the interests of weaker states threatened by demagogues, genocide, civil war, and internal armed conflict? The remainder of this chapter will attempt to suggest answers to these questions.

Dynamic, disparate forces challenge the international order. Globalization promises prosperity and freedom, but failed states, disease, pollution, and rising birthrates hold large segments of the world’s population hostage. Furthering individual rights and enforcing collective security requires international cooperation, but depends at present upon the good will and determination of powerful sovereign states.

A brief look at two recent developments illustrates the nature of the challenge and provides insights as to possible courses of action. The first of these is the creation of the International Criminal Court; the second is the American-led war on terrorism.
The International Criminal Court (ICC) is an idea whose time has come. It fulfills the hopes and aspirations of a majority of the world’s nations. Eighty years in the making, from Versailles in 1919 to the Rome Statute in 1997, it reflects a new consensus on international justice and the rule of law. Recognizing that sovereignty protected rulers and their agents from accountability for crimes ranging from aggressive war to democide,\textsuperscript{82} the ICC provides a permanent forum for prosecution when state courts cannot or will not act. As of this writing, 139 nations have signed the treaty, and 89 have ratified it. The Court commenced operations on July 1, 2002, and according to its charter enjoys almost universal jurisdiction.\textsuperscript{83} Its potential impact is enormous, even without United States participation.\textsuperscript{84}

At the same time, the United States leads international efforts to locate, isolate and destroy international terrorist groups with global reach. These groups threaten international order and prosperity. They promote extremist views and promise false hopes to states and individuals left behind on the road of progress. While most states support and encourage American efforts to eradicate this plague, the international system is not well-suited for the struggle. There is no international agreement on terrorism, and none that even attempts to define the term. Several treaties address individual terrorist acts—hijacking, murder, money laundering, illegal crossing of borders, etc., but their solutions require state action—apprehension, extradition, and prosecution of individual terrorists.\textsuperscript{85}

To date, therefore, the international response to terrorism depends upon American leadership, moral and physical. Coalitions are formed to fight terrorism, but they form and reform constantly depending on where American efforts are focused. In Afghanistan a multilateral effort enjoyed broad international support;\textsuperscript{86} in Iraq, another theater in this global war, the coalition fell short of expectations, and the intervention remains controversial.\textsuperscript{87} The search for order and the rule of law means different things to different states. America may lead, but others need not follow.

These events are closely related. They represent opposite poles of debate over how we are to pursue Ikenberry’s “constitutional order” on a global scale. While most states agree in theory with multilateral institutions, the utility of the United Nations, and the need for rule of law within and among states, international law must contend with the “friction” of sovereignty.\textsuperscript{88} This uneasy relationship is likely to continue. Ironically, some states and prominent individuals have called for the ICC to investigate American intervention in Iraq as an “illegal” use of force in violation of treaty law and customary law.\textsuperscript{89}

**Unilateralism: What Price Sovereignty?**

This situation is unhealthy for international order. The new world order described in preceding sections of this chapter is real, and it is here to stay. The ties that bind the international community are strong and enduring, and international institutions enjoy unprecedented support and influence. Perhaps the most amazing point of all is that American values and leadership were instrumental in creating this environment. We are reminded once again that we have to be careful what we wish for.

American actions are well-intended, although many people sympathetic to American interests do not accept this proposition at face value. To the extent that American national interests must be served, we can continue to make unpopular decisions and execute American grand strategy without broad international support. But we cannot do so indefinitely. America may act unilaterally on a case-by-case basis, weighing costs and benefits. We need to be honest with ourselves when we do so, however. Others may perceive our actions as excessive and bullying.

The cost of military intervention can be high: proponents must establish a legal basis, a *jus ad bellum*, for action; they must apply force consistent with the laws of armed conflict and possible
mandates of the UN Security Council; the fighting must be controlled both in time and in space; fallout and political reactions must be anticipated; and, lastly, those advocating intervention must expect the unexpected. Murphy’s Law applies to all human endeavors. Given the national interest in defeating terrorism and preserving international order, some degree of risk is normal and expected.

THE ROAD AHEAD: SURVIVING IN THE NEW WORLD ORDER

We do not operate in a vacuum. The international environment outlined in this chapter demands our attention, if not our cooperation. It provides several useful lessons to guide our conduct in the 21st century.

First, multilateral action is preferred in most cases. America lacks the political and military strength to go it alone in every instance. U.S. economic and military power provides the mobility and ability to go anywhere, but coalitions provide additional resources, political support, and legal justification and legitimacy for international operations. If international relations theorists are correct, states that pursue hegemonic order motivate other powers to combine to frustrate their efforts. Although such a backlash against American hegemony is not evident at present, no one can guarantee that further unilateral adventures will not produce one.

Second, the United States has tremendous capabilities at its disposal without employing the military element of power. Diplomatic, economic, and informational tools provide enormous flexibility in formulating strategy and handling complicated problems as they arise. Infrequent demonstration of American military power will suffice to remind opponents of military capabilities while diplomats pursue peaceful resolution of disputes by other means. This approach will also reassure friends, allies and critics alike of American intentions and demonstrates a willingness to exhaust all reasonable alternatives before applying force. It will preserve valuable goodwill.

Third, every crisis does not require international intervention or the use of military forces. Acknowledging the threat posed by global terrorist networks, most international crises are local and have little impact on terrorism or global security. Many of them, we need to remind ourselves, may be safely ignored and left to others to solve. Unless international stability is seriously threatened, mobilizing the international community and its resources might prove counterproductive. We’ve learned, since the heady days of 1991, of the great Gulf War Coalition forged by President Bush, that the new world order promised by the collapse of the Soviet Union and the end of the Cold War has not come to pass, at least not in the way we imagined it. But there is a new world order, and states have to live in it.

The fourth and final lesson we can draw from this analysis of international law and sovereignty is that the international system as it exists (and as it was designed) reflects American values and American visions for the future. It is a legitimate part of our heritage. When we presume that all institutions oppose our interests because some do, or presume that all treaties are suspect because some are, we deny that heritage. More often than not, international institutions and agreements further American interests.

It is important for us to remember that democracies tolerate differences, and in fact thrive on them. If the core of “constitutional order” in the world is Western democracy, then we must expect that there will be disagreements and heated debate among states. We will not always agree on everything. But in a constitutional system everyone must play; the rules don’t allow a state to simply take its ball and go home whenever it doesn’t get its way. True, no referee will step in, blow a whistle, and impose a penalty, but true international order, just like domestic order, depends upon mutual respect and cooperation and responsible behavior. Those who claim global leadership
within the system have the greatest responsibility to ensure the system works. It is time to reassess America’s role and reclaim our rightful position as the leader of the world community. Struggling against the ties that bind us, like a modern Gulliver, is counterproductive.

ENDNOTES - CHAPTER 16

8. E.g., The prohibition of alcohol, U.S. Constitution, amendment 18. It was repealed by the Twenty-First Amendment 14 years later.

17. Ibid., 3. See also Levi, pp. 6-9.

18. Statute of the International Court of Justice, Article 38.

19. The SS Lotus Case, Fr. v. Turk., Permanent Court of International Justice, 1927, Ser.A, No. 10, September 7, 1927, at pp. 18-19 “The rules of law binding upon States therefore emanate from their own free will as expressed in
conventions or by usages generally accepted as expressing principles of law...” International law scholars disagree on
the fundamental nature of law. There are two distinct schools of thought. The Monist view holds that international law
and municipal, state) law are simply parts of an integrated system. The focus is on the individual. Dualists believe that
international law and municipal law are two distinct systems. The focus of domestic law is the individual; the focus of
international law is on states. These views influence contemporary debate. See Levi, pp. 22-23.

20. Levi, p. 35. Levi cites as an example the launching of Sputnik by the Soviet Union, which claimed that artificial
satellites could fly unimpeded over state territory, and the general acceptance of this proposition.

21. Ibid., p. 5.

22. Brierly, p. 66.

23. Although both predictability and stability are encompassed in the phrase “rule of law,” the phrase is itself of
fairly recent origins, representing the triumph of the western democracies since World War II. Historically, international
law has concerned itself more with creating a stable, predictable world, rather than with a particular technique used to
accomplish these ends.

24. Democracy in ancient Greece, notably Athens, was real and vibrant but limited in modern terms: only citizens
could exercise political rights or hold land; women had few rights; slavery was an essential institution. None of this,
however, diminishes the power and influence of Greek thought on leaders of the Enlightenment. See William Y. Elliott

Diplomacy, 1889-1908.”

35. Ibid.

32, Summer 2002, pp. 73, 76.

37. Ibid.

38. General Orders No. 100, supra note 1.

39. The Hague Conventions of 1899 were largely incorporated in the Conventions of 1907, of which five are important:
(1) Convention Relative to the Opening of Hostilities, October 18, 1907, 36 Stat. 2259; (2) Convention Respecting the
Laws and Customs of War on Land and Annex, October 18, 1907, 36 Stat. 2277; (3) Convention Respecting the Rights
and Duties of Neutral Powers and Persons in Case of War on Land, October 18, 1907, 36 Stat. 2310; (4) Convention
Concerning Bombardment by Naval Forces in Time of War, 18 October 1907, 36 Stat. 2351; and, (5) Convention for the
2371.

42. Ibid., p. 247.

43. Department of the Army, Pamphlet 27-161-2, International Law, Volume II, Headquarters, Department of the
Army, 1962, p. 221. These trials, known as the Leipzig trials, demonstrated the problem obtaining jurisdiction over war
criminals—Germany was not defeated and occupied as in World War II. The Leipzig trials did motivate the allies in
1945 to establish an international tribunal at Nuremberg.

44. Kissinger, p. 247.

45. Ibid., p. 373. The Washington Conference of 1922 attempted to regulate capital ships; the London Conference
of 1930 attempted to regulate submarines as well. See Department of Army Pamphlet 27-161-2, supra, at p. 16. For a
detailed study of the Naval Treaties see W. Hays Parks, “Making Law of War Treaties: Lessons from Submarine
Warfare Regulation,” U.S. Naval War College International Law Studies, Volume 75, Michael N. Schmitt, ed., Newport,

46. The Kellogg-Briand Pact, or Pact of Paris, is formally known as The General Treaty for the Renunciation of War,

47. Kissinger, p. 40.

50. Ibid, Preamble.

277, art. VI; the Geneva Conventions of 1949, four separate conventions—one on the Amelioration of the Condition of
the Wounded and Sick in Armed Forces in the Field, on the Amelioration of the Condition of Wounded, Sick and
Shipwrecked Members of Armed Forces at Sea, the Geneva Convention Relative to the Treatment of Prisoners of War,
and the Geneva Convention Relative to the Protection of Civilian Persons in Time of War; and Protocols to the Geneva
Conventions of 1949, 1977. These conventions form the nucleus of what is commonly called “International Humanitarian
Law.”

52. E.g., The Food and Agriculture Organization, the World Health Organization, the International Civil
Aviation Organization, the United Nations Educational, Scientific and Cultural Organization, the International Labor
Organization, and the International Monetary Fund, to name only a few.

53. E.g., the START and SALT strategic arms negotiations and Anti Ballistic Missile (ABM) treaties with the USSR,
and multilateral international agreements, including the Conventional Weapons Treaty, 1980, the Chemical Weapons

54. Notes 11 and 12, supra.

55. E.g., Ivo H. Daalder, “The United States and Military Intervention in Internal Conflict,” in International Dimensions

56. United Nations Charter, Chapter I, Article 2, para. 1; and Chapter XI.

59. E.g., Vietnam. Our efforts to combat aggressive communist expansion encountered international opposition both at the UN and in other international forums. Agreements such as Protocols I and II to the Geneva Conventions of 1949 and the United Nations Convention on Law of the Sea displayed a distinct anti-Western and anti-American bias, yet reflected the considered opinion and practice of many states. International law was no longer the sole province of the great powers and the “civilized” states, and traditional American leadership in international law began to fade.

60. SALT, START, ABM, START II, etc.

61. Nuclear weapons (and other weapons of mass destruction) have been banned from space, although space has not been “demilitarized.” *Treaty on Principles governing the Activities of States in the Exploration and Use of Outer Space (Including the Moon and Other Celestial Bodies, Outer Space Treaty),* 1967.

64. There are many examples. International support of the Palestinians is one; international efforts to remove white racist governments in Rhodesia and South Africa are another.

65. The Ottawa Treaty, formally known as the “Convention on the Prohibition of the Use, Stockpiling, Production and Transfer of Anti-Personnel Mines and Their Destruction,” December 1997. The Ottawa process featured active participation by NGOs and international celebrities. Their priorities were humanitarian, not utilitarian in nature. See Krauss and Lacey, supra note 36 at p. 81.

67. On 17 September 1997, President Clinton announced that the United States would develop alternatives to anti-personnel land mines by 2003, and would replace all “dumb” land mines in South Korea by 2006. The principle U.S. objection to the Ottawa Process was its failure to acknowledge U.S. fielding of “smart” or self-destructing land mines. The Conventional Weapons Convention of 1980 prohibits indiscriminate laying of mine fields and requires mapping, marking and removal, among other requirements. The Ottawa Process is unlikely to stop rogue states and revolutionary movements from indiscriminately laying and abandoning mines.

68. World Trade Organization sessions have attracted enormous demonstrations by diverse groups ranging from environmentalists to religious organizations to unrepentant communists.

70. Supra, note 19.

75. Kissinger, p. 47.

76. Mersheimer, supra, note 3.

82. Democide refers to the torture and killing of citizens by their own governments, generally despotic and totalitarian in form. One figure attributes 170 million deaths to democide over the course of the 20th century, a number two to four times greater than the total number killed in war. See John Norton Moore, “Opening Comments,” Vol. 149, *Military Law Review*, 1995, pp. 7,10. Professor Moore, Director of the Center for National Security Law at the University of Virginia School of Law, made these comments in a symposium on “Nuremberg and the Rule of Law: A Fifty year Verdict” at the U.S. Army Judge Advocate General’s School, 17 November 1995.

83. Universal Jurisdiction is based upon the principle that certain crimes violate international interests and norms and that states may take action regardless of the location of the crime or the nationality of the perpetrator or the victim. At present international law recognizes universal jurisdiction for certain offenses, e.g., crimes against humanity, war crimes) covered by the Geneva Conventions of 1949. The apprehension of Nazi war criminal Adolf Eichmann in Argentina and his trial in Israel in 1961 is often used to illustrate the concept. Others would extend the principle further, to cover domestic crimes that violate humanitarian principles not formally recognized in international law. See *The Princeton Principles on Universal Jurisdiction*, the Princeton Project on Universal Jurisdiction, Princeton, Program in Law and Public Affairs, 2001.

84. President Clinton signed the treaty on behalf of the United States on December 31, 2000. It was never sent to the Senate for ratification, and on 6 May 2002 the United States officially notified the United Nations of its intention not to become a party. See U.S. Department of State Press Statement containing the official notice, accessed on line at www.state.gov/r/pa/prs/ps/2002/9968pf.htm on 29 October 2002.

86. The United Nations Security Council endorsed, although it did not direct, efforts to remove the Taliban and destroy Al Qaeda bases in Afghanistan.

87. The United Nations Security Council did not support intervention in Iraq beyond weapons inspectors. With at least two of the permanent members, France and Russia, likely to veto any Security Council Resolution sanctioning invasion, the United States led a “coalition of the willing.”
88. As Undersecretary of State Marc Grossman stated on May 6, 2002, as he explained why the United States withdrew from the ICC Treaty: “We believe that states, not international institutions are primarily responsible for ensuring justice in the international system.” Remarks at the Center for Strategic and International Studies, distributed via e-mail by Listmgr@PD.STATE.GOV on May 6, 2002.

89. This represents politics as much as law. UN Security Council sanction is not a prerequisite for intervention. Article 51 of the Charter permits state action in self defense and customary law provides an independent basis for action. The Kosovo precedent of international humanitarian intervention without Security Council approval also supports American intervention to remove the rogue regime of Saddam Hussein. International law scholars do not agree on these points.
CHAPTER 17
RETOOLING U.S. PUBLIC DIPLOMACY
AS A STRATEGIC INSTRUMENT OF FOREIGN POLICY

Marybeth P. Ulrich

The shape of the world a generation from now will be influenced far more by how well we communicate the values of our society to others than by our military or diplomatic superiority.

Senator William Fulbright, 1964

Public diplomacy refers to U.S. programs dedicated to promoting U.S. interests, values, culture, and policies within foreign audiences. The U.S. employs cultural exchanges, education programs and foreign broadcasts to convey U.S. interests and ideals to foreign audiences. Public diplomacy aims to facilitate the understanding of the United States people and its policies and to broaden the dialogue between American citizens and institutions and their counterparts abroad.

Joseph Nye’s introduction of the concept of “soft power” as an essential complement to “hard power” captures the essence of public diplomacy. Nye wrote of the “soft power of attraction” essential “to draw target publics into the U.S. web of influence.” The achievement of U.S. foreign policy goals is greatly facilitated when more friends and allies share our interests and contribute to their accomplishment. In the case of the War on Terror, victory is directly related to prevailing in a battle of ideas, which public diplomacy tools seek to shape.

The 9/11 Commission called for action “to compete as vigorously on the ideological battlefield as we do on the military and intelligence fronts.” The Department of State (DOS) Advisory Group on Public Diplomacy, the General Accounting Office, the Heritage Foundation, the Council on Foreign Relations, and the 9/11 Commission have all issued reports stating that a greater emphasis is needed by the U.S. Government on public diplomacy.

This chapter takes the position that current approaches to public diplomacy are flawed and must be reconsidered and appropriately funded in order to acquire the public diplomacy capabilities needed to win the War on Terror. Furthermore, public diplomacy must be integrated into the policymaking process in the form of a comprehensive and coherent strategy. Specific recommendations will follow from the evaluation of three criteria: national interests, costs, and public opinion. The research method draws on extensive studies by government bodies and think tanks like the Council on Foreign Relations, the Heritage Foundation, the Congressional Research Service, and the Pew Research Center, to cull the most essential findings and recommendations in order to convince senior policymakers that more must be done to improve U.S. public diplomacy.

BACKGROUND

The Gulf War coincided with the end of the Cold War. In Operations DESERT SHIELD and DESERT STORM, the U.S. assembled the greatest international coalition in history. America’s former chief adversary, the Soviet Union, supported the U.S.-led initiative to push Saddam Hussein’s troops out of Kuwait. President George H. W. Bush’s “new world order” became a moniker for what was perceived to be a more benign international environment. U.S. political leaders, in turn, called for the reduction of the Cold War-era force structure and deemphasized public diplomacy as a Cold War relic. In 1999 between 50 percent and 83 percent of foreign populations polled held favorable views of the United States, further mitigating the priority for public diplomacy funding.
In 1999 Congress disbanded the United States Information Agency (USIA), which had been the U.S. Government agency dedicated exclusively to public diplomacy. USIA’s information and exchange programs were integrated into the State Department under the new Under Secretary for Public Diplomacy and Public Affairs. The broadcasting arm of USIA fell under a new independent entity, the International Broadcasting Bureau (IBB). Meanwhile, the forces of globalization increased the accessibility of information among people worldwide requiring the United States to adapt its strategic communications to suit the needs of a global information society. The biggest technological change has been the globalization of information via the internet.

Since September 11, 2001 (9/11), public diplomacy tools have been employed to influence Muslim and Arab populations to combat terrorism. European and other friends and allies of the U.S. have also been targeted in order to bolster coalition support for the War on Terror. The establishment of a Policy Coordinating Committee (PCC) to improve interagency coordination of public diplomacy activities, increased funding, and new initiatives both within the Department of State, USAID, and DOD point to the importance of public diplomacy as a tool in a long term struggle where the battle of ideas is the center of gravity.

The areas of public diplomacy used to influence foreign target audiences are international information programs, educational and cultural exchange programs, and international nonmilitary broadcasting. Often included in a canvas of public diplomacy programs is the National Endowment for Democracy (NED), which operates at arm's length from the Department of State, but which DOS principally funds. NED’s mission is to assist democratic movements worldwide by leveraging its status as a private, non-profit entity primarily in the area of foreign elections.

The primary agencies involved in these areas are the State Dept, the International Broadcasting Bureau and the National Endowment for Democracy. Within the Department of State, the Office of International Information Programs (IIP) and the Bureau for Educational and Cultural Affairs (ECA) focus on strategic communications and international exchanges respectively. In addition, the bipartisan Broadcasting Board of Governors (BBG) administers the Voice of America (VOA) and numerous surrogate entities such as Radio Free Europe/Radio Liberty (RFE/RL) and Radio Marti (broadcast to Cuba). Several new initiatives launched since 9/11 include Radio Sawa and a 24 hour news channel, Alhurra (the free one), broadcast to the Middle East. The newest State Dept entry aimed at “Telling America’s Story” is a web site for foreign audiences, http://www.america.gov.

According to the Congressional Research Service, the $1.2 billion budgeted for public diplomacy activities in FY07 is comparable in constant dollars to the amount spent in 1980 (actual dollars level is about double). Since 2001, congressional appropriations for public diplomacy programs have increased by 57 percent (in actual dollars) with an average increase of 8 percent per year. Later, I will examine the debate over whether these levels are adequate to meet the threat.

The National Security Strategy of the United States of America (NSS), published in March 2006, establishes two inseparable priorities: “fighting and winning the war on terror and promoting freedom as the alternative to tyranny and despair.” The NSS posits further:

From the beginning, the War on Terror has been both a battle of arms and a battle of ideas - a fight against the terrorists and against their murderous ideology….. In the long run, winning the war on terror means winning the battle of ideas, for it is ideas that can turn the disenchanted into murderers willing to kill innocent victims.

The diplomatic instrument of power is a critical component in the NSS’s objective to advance freedom and human dignity through democracy as the long-term antidote for transnational terrorism. Essential to this end is the continued reorientation of the Department of State toward
transformational diplomacy. A key component of transformational diplomacy is the strengthening of public diplomacy in order to:

advocate the policies and values of the United States in a clear, accurate, and persuasive way to a watching and listening world. This includes actively engaging foreign audiences, expanding educational opportunities for Americans to learn about foreign languages and cultures and for foreign students and scholars to study in the United States; empowering the voices of our citizen ambassadors as well as those foreigners who share our commitment to a safer, more compassionate world; enlisting the support of the private sector; increasing our channels for dialogue with Muslim leaders and citizens; and confronting propaganda quickly, before myths and distortions have time to take root in the hearts and minds of people across the world.

Since 9/11 there has been an increased focus on departments and agencies across the government contributing to the mission of improving America’s image. Besides the NED mentioned above, other U.S. Government agencies involved in de facto public diplomacy include the Peace Corps and USAID. Both involve people-to-people communication in U.S. Government funded programs in pursuit of U.S. policy interests, and as such both perform a strategic public relations function. USAID, in particular, is charged with publicizing U.S. humanitarian assistance. Additionally, the Department of Defense (DOD) has embarked on initiatives to aggressively conduct foreign communications. The much maligned Office of Strategic Influence was a short-lived effort that came on the scene in the fall of 2001 and was later replaced by the Office of Strategic Communication, which has the mission of coordinating and disseminating combat information. The DOD funded contracts worth $300 million over five years to create media products aimed at improving the public image of the United States abroad. The Joint Psychological Operations Support Element of the U.S. Special Operations Command has been coordinating these efforts.

EVALUATION

Next, we will evaluate the effectiveness of U.S. public diplomacy efforts according to three criteria: national interests, costs, and public opinion.

National Interests.

In the aftermath of 9/11, one question weighed most heavily on Americans’ minds, “Why do they hate us?” Public diplomacy in the Cold War was aimed at countering Soviet power and influence. The primary objective now is to counter the influence of Islamic extremism in order to defuse the root cause of terrorism. Policymakers and the public alike now share the realization that strong negative opinions of the United States affect the propensity of friends and allies to be helpful in the War on Terror and assist terrorist groups in their efforts to recruit new members.

Furthermore, consensus is growing that public diplomacy can no longer be viewed simply as a means of marketing or selling the “American brand.” Public diplomacy must be integrated into the policymaking process at the earliest stages, because global attitudes increasingly determine the success of American strategy. This is especially true in the war of ideas that is at the heart of the War on Terror. In the Bush administration, U.S. strategic choices have been largely unconstrained by international opinion. Shifting efforts toward shaping public opinion to enhance U.S. credibility and the acceptability of U.S. policies will pay off in the long term.

There is an inextricable link between American foreign policy choices and public diplomacy. Regardless of the correctness of the various policy choices, each policy decision has consequences in terms of how it resonates abroad. Improving America’s image abroad is a specific foreign policy goal but cannot be disconnected from the overall U.S. foreign policy agenda. Multiple analyses
reiterate the conclusion that America’s image in the Middle East and around the world can only be changed with good policies.30

So which policy goals are being helped and which are being hurt by the current approach to public diplomacy? The first pillar of the March 2006 National Security Strategy is to promote freedom, justice, and human dignity.31 Opportunities to provide humanitarian aid to populations with poor perceptions of the U.S. have paid off and should be leveraged through greater spending on foreign aid. The U.S. saw a spike in favorable opinion among Indonesians after the U.S. provided disaster relief in areas hard hit by the December 2004 tsunami. Relief work in Pakistan after the October 2005 earthquake had similar positive effects.32 These examples indicate that greater public diplomacy payoffs could have occurred with an even quicker and more generous response to these critical populations in the battle for ideas.

On the negative side, continuing to pursue national interests through a foreign policy that is perceived as aggressive, unilateral, narrowly self-interested, and unconstrained will not result in improving the U.S. global image.33 Effective public diplomacy is critical to winning the war of ideas, but simply focusing on communicating a message that in policy terms is loathed by its target audience will not sway public opinion. Polls show that Arab respondents understand and respect American values, but they do not see American policy reflecting those values. The images from the Abu Ghraib Prison and Guantanamo Bay detracted from American credibility and have undermined even the best public diplomacy efforts.

Change must fall along two main dimensions. First, the U.S. must increase public diplomacy capabilities through an integrated approach that transcends departments and agencies and even the private and public sectors. Resources should be increased (this aspect is developed in the next criteria). Funding should be commensurate with the potential for return on investment in the overall strategy for winning the War on Terror. The U.S. also needs to address personnel issues in terms of positions and training. Second, beyond building public diplomacy capabilities, the most significant change needed is to integrate public diplomacy into the policymaking process in the form of a comprehensive and coherent strategy. Such a strategy would consider the benefits of proactively shaping public opinion as policy is being developed. A proactive approach would also take into account the constraint that public opinion abroad may have on the achievement of foreign policy ends, especially the ways through which they are achieved.

Costs.

Considering the important role public diplomacy plays in the overall success of U.S. foreign policy, especially in combating the rise of terrorists bent on the destruction of the American way of life, U.S. spending on public diplomacy is inadequate. The Department of State’s own Bureau of Resource Management called the state of funding “absurdly and dangerously inadequate,” especially in the Middle East.34 A team of Heritage Foundation researchers noted that the U.S. spends $30 billion annually on intelligence gathering in an effort to find out what others around the world are thinking, but only $1.2 billion per year on trying to shape these thoughts.35

The legacy of underfunded and uncoordinated public diplomacy programs can be corrected by elevating funding to a level commensurate with its role as a vital component of U.S. foreign policy. Current levels of public diplomacy funding represent only 4 percent of the international affairs budget. In contrast, investing one percent of the nation’s proposed $379B military budget on public diplomacy would result in a budget increase to $3B to $4B.36

A specific funding program that experts argue would dramatically enhance the overall effectiveness of public diplomacy is foreign public opinion polling. Such spending would enable
the identification of potential target audiences along a continuum of support. Gains could subsequently be made by targeting moderate audiences and those who self-identify as “undecided” or offering “soft support” for U.S. policies. Currently the “US government spends only $5 million annually on foreign public-opinion polling, far less than the research costs of many U.S. senatorial campaigns and only a fraction of the $6 billion spend for these purposes by American private-sector organizations.”

VOA and NED funding should be restored to and eventually exceed Cold War levels. In the decade following the Cold War, Congress cut funding for international broadcasting by 40 percent. Since 9/11, however, VOA’s budget increased 45 percent to the level of $652 million in FY 2006. New international broadcasting initiatives targeting the Middle East should continue to receive new funding while programmers experiment with formats that effectively mix substance and “ratings.” The bottom line is that U.S. public diplomacy must be funded at significantly higher levels—with funding increases phased in over several years. The increased resources should be tied to specific objectives and monitored closely for effectiveness.

Increased spending, especially funding targeted at the areas outlined above, will improve the effectiveness of U.S. public diplomacy. Real progress, however, depends on a sensible organization that eliminates the legacy of stove-piping and enhances coordination within the State Department and across the relevant government agencies. The development of a public diplomacy doctrine and overall strategy laying out working principles, coordination procedures, and criteria for evaluating the success of the strategy over time will also ensure that increased spending produces better results.

The cost of ineffective public diplomacy is already evident. Five years into the Iraq war, the U.S. global image continues to slip, even among publics in countries closely allied with the US. Short-term gains made through disaster relief in Indonesia and Pakistan have eroded to pre-disaster levels. The final criteria evaluated below, public opinion, will elaborate on the most recent polling. Coalition partners have steadily withdrawn troops and announced their mission in Iraq complete in the face of weak public support for continued assistance to the US. Every effort must be made now to improve the funding and execution of U.S. public diplomacy programs. The opportunity to prevail in the battle of ideas may be slipping away.

Public Opinion.

The Pew Research Center’s Global Attitudes Survey indicates that America’s global image continues to slip while international support for the War on Terror continues to wane. However, the effectiveness of public diplomacy efforts is limited by the substance of American policies. As former congressman Lee Hamilton observed, “public diplomacy can only present policies, it cannot shape them.” For example, the 2006 Pew survey showed that the Iraq war continues to be a drag on the U.S. global image, with majorities in 10 of the 14 countries surveyed responding that the war has made the world a more dangerous place. In addition, favorable opinions of the United States fell in most of the countries surveyed. The polling data indicates that U.S. public diplomacy efforts are not making inroads into global attitudes toward either Americans or U.S. foreign policy.

Majority support for the U.S.-led War on Terror can be found in only two of the fifteen countries surveyed, India and Russia, both of which have significant problems with domestic terrorists. However, in the case of India, America’s favorability rating dropped 15 points in one year. Unfavorable attitudes persist in predominantly Muslim countries. By all accounts public diplomacy efforts in the Middle East are a failure. For example, in Egypt, a country that has received more U.S. aid in the past 20 years than any Muslim country by far, only 15 percent of Egyptians have a
favorable opinion of the U.S. In the 2006 Pew survey the percentage of Egyptians supporting the U.S.-led war on terror remained at 10 percent, where it has hovered since 2002.

A 2006 GAO audit evaluating the effectiveness of the State Department’s public diplomacy programs focused on a continued inability to engage Muslim audiences. While some resources have been shifted to the Muslim world ranging from a 25 percent increase in the Near East to a 39 percent plus up in South Asia, the number of authorized overseas positions in regional bureaus held steady. Furthermore, the report concluded that human capital challenges, such as poor language proficiency and short tours of duty, are compounded by security concerns at most posts in the Muslim world. Consequently, public diplomacy officers in the Muslim world spent less time communicating with local audiences than their positions require.

The current mix of information programs, media programs, and cultural and educational exchanges should be reconsidered with greater emphasis placed on cultural and educational exchanges. Objective reports assessing the effectiveness of U.S. public diplomacy cited the cultural and educational exchange programs as the most effective. The media programs have been perceived as less effective due to the U.S. credibility problem in the target populations. While these perceptions persist, the U.S. will benefit from investing in local moderate media operations and those of our allies with common interests, but without the credibility stigma of the U.S. in the Middle East. Finally, an underdeveloped aspect of the information programs is translating more English language texts into Arabic. In the past century, only 10,000 English language books have been translated into Arabic.

The current trends in the effectiveness of U.S. public diplomacy are poor.

In sum, the promise of America’s public diplomacy has not been realized due to a lack of political will, the absence of an overall strategy, a deficit of trained professionals, cultural constraints, structural shortcomings, and a scarcity of resources. Money alone will not solve the problem. Strong leadership and imaginative thinking, planning, and coordination are critical.

Policymakers are beginning to understand that the Cold War public diplomacy structure must be retooled and appropriately resourced to make a more effective contribution to U.S. national security interests. At a minimum, the conceptualization and execution of public diplomacy programs must reach its full potential. The goal of spreading freedom and democracy throughout the globe is unrealizable “unless America has a more coordinated, cooperative mechanism tailored for public outreach.”

CONCLUSIONS AND RECOMMENDATIONS

This chapter argued that current approaches to public diplomacy are flawed and must be reconsidered and appropriately funded in order to acquire the public diplomacy capabilities needed to win the War on Terror. Evaluation of three criteria: national interests, costs, and public opinion illustrated that the Bush administration efforts have fallen short in every area. A new public diplomacy paradigm is needed that integrates public diplomacy into a comprehensive strategy for winning the War on Terror. Such a strategy would recognize that improving America’s image abroad is in and of itself in the national interest. Effectively communicating U.S. policies is essential to building the coalitions critical to the policies’ successes and for dissuading potential terrorists to do harm to U.S. interests. As the 2006 NSS asserted, winning the War on Terror is dependent on winning the battle of ideas.

Beyond this strategic reconceptualization of public diplomacy’s role among all national instruments of power, much work can be done in the short term to improve the effectiveness of public diplomacy programs currently underway. Attentive oversight, strong leadership, cultural literacy,
and adequate funding will contribute to improving the U.S. image across the globe. Furthermore, public diplomacy must be integrated into the policymaking process in the form of a comprehensive and coherent strategy.

SPECIFIC RECOMMENDATIONS

Overall Public Diplomacy Strategy.

1. Develop a comprehensive and coherent strategy for public diplomacy.
2. Incorporate public diplomacy tools into policy formulation to shift toward proactive vs. reactive actions.
3. Create an independent not for profit “Corporation for Public Diplomacy” to bridge the gap between public and private sector initiatives akin to the Corporation for Public Broadcasting (CPB).

Improving Communications to Target Audiences.

4. Move toward two-way dialogue in place of one-way push-down mass communication.
5. Increase funding for broadcasts to Arab and Muslim populations and rebuild scholarship, exchange, and library programs targeted at young people.
6. Use supportive indigenous, influential messengers whenever possible to help foster internal dialogue and debate.
7. Recognize that the Muslim world, in particular, responds more favorably to U.S. values and freedoms than it does to U.S. policies. (Messages that focus on Muslims “hating freedom” are ineffective.)

Maximize Multilateral Approaches.

8. Maximize opportunities to engage in multilateral approaches to communicate Western values and the benefits of modernity.
9. Coordinate strategic communications efforts with sympathetic allies that may be regarded as more credible than the U.S.
10. Improve relationship with foreign press and increase access of foreign journalists to senior U.S. officials.

Retool Public Diplomacy Instrument for Greater Effect.

11. Reconstitute the USIA or a similar entity with public diplomacy as its sole mission.
12. Invest in foreign public opinion research, recruiting, training, media studies, and expanded field staffing.
13. Improve the language and cultural training of public diplomacy officers.
14. Increase opportunities for educational and cultural exchanges.

IMPLEMENTING RECOMMENDATIONS IN THE NATIONAL SECURITY PROCESS

The first three recommendations focus on increasing the role of public diplomacy in the overall strategy formulation process. Implementation requires a shift in bureaucratic mind-set, recognizing
that public diplomacy must be part and parcel of policy involvement. All members of the national security community should be involved, including those in the public sector.

Recommendations four through seven emphasize the message itself, and in particular, the means through which the message is delivered. Implementation requires abandoning Cold War structures and methodologies in order to employ more effective ways to deliver America’s message. Recommendations eight through ten explore multilateral approaches. Too often the U.S. is perceived as being the sole advocate for its message abroad, when the principles of freedom, democracy, and human rights are shared by much of the world. Implementation requires the adoption of a multilateral mindset and the initiation of public diplomacy campaigns to turn around negative U.S. images in societies that largely share our values.

The final recommendations focus on retooling the public diplomacy instrument. Implementation requires financial investment as well as revamping training policies. Restructuring DOS to separate USIA or creating a similar stand-alone entity is also required. Recognizing that exchanges have the greatest potential to contribute to the long-term national interests requires a shift in priorities among current programs.

Many challenges face the U.S. as it seeks to reverse a steady decline in the world’s regard for its image and policies. The beginning of a new presidential Administration in 2009 is a critical window of opportunity to take concrete steps to regain America’s “soft power,” the power to attract the world to U.S. values and culture. Public diplomacy should be regarded as a strategic instrument of foreign policy and given resources and leadership commensurate with that role. Success in the War on Terror will remain elusive absent such action.

Civil-military relations describes a field of study as well as an arena of participation in the political life of the state. As a field of study, civil-military relations is multidimensional and interdisciplinary. Political scientists, sociologists, philosophers, and historians, as well as national security practitioners all bring their unique perspectives to the field. As an arena of political participation, civil-military relations links the political and military components of strategy. The Prussian theorist, Carl von Clausewitz, was clear in his view that war is a political act. “The political object is the goal, war is the means of reaching it, and means can never be considered in isolation from their purpose.”

It should come as no surprise then, that the civilian leadership and its generals are collaborators in the arena through which state interests are advanced, especially when violence or the threat of violence is employed. Consequently, any military activity is arguably a necessary object of political determination.

What distinguishes civil-military relations from general studies of politics or national security affairs is its focus on the military as the actor of primary interest of study. The focus is generally on the military leadership and its relationship with its political masters. Attention is also paid to the military as an institution interacting with other national security institutions. A key assumption of the field is that armed forces develop a unique set of institutional attributes stemming from the power the state cedes to them to secure the state. The military is recognized as a distinct entity in the political system and in society at large. How the military conducts its relationships with its political masters and clients across the political and societal scenes reveals a state’s pattern of civil-military relations.

Tension between the civilian and military spheres is inherent in their relationship. In the absence of mature democratic institutions, these spheres vie for power and control over each other. Ensuring civilian control, or more accurately “political control” of the military is a dominant theme in civil-military relations. While Samuel Huntington in his classic work, The Soldier and the State, depended on professionalism as the best method of achieving civilian supremacy through “objective civilian control,” Samuel Finer warned in his classic work, The Man on Horseback, that professionalism “may lead [the military] to see themselves as the servants of the state rather than of the government in power.” Consequently, the study of professionalism, particularly the military’s institutional preferences and norms regarding its relationship with its civilian masters is an important aspect of the study of civil-military relations.

Even in the most advanced democratic systems, managing the participation and influence of the military institution to maximize military effectiveness, sound strategy, and the democratic principles of the state is an ongoing challenge. In the age of modern warfare the state’s civilian national leadership is especially dependent on the expert knowledge resident in the military sphere as a critical input for decision making. The military, however, is equally dependent on civilian expertise to understand the wider political ramifications of their putatively military acts. Collaboration between the two spheres is a necessity to craft and execute strategy effectively. Navigating this space between political control and the provision of expert knowledge within specific societal backdrops requires a firm grasp of civil-military fundamentals. It is essential that strategic leaders, civilian and military alike, understand the key principles associated with the military’s role in the political and social life of the state.
Civil-military relations is a broad field of study with great relevance for national security professionals. Developing professional competencies across its varied dimensions will yield great professional pay-offs for strategic leaders and the states they serve. Recognizing that a civil-military dimension is present in most strategy and policy issues will foster the ongoing process of developing the civil-military competencies needed to carry out civilian and military roles in the national security process.

The primer’s goal is to alert its readers to the scope of the field. The intent is to foster interest in the additional competencies that civilian and military participants alike must acquire to fulfill their responsibilities in the national policy process. The seven sections that follow introduce the key principles and dimensions essential to gaining strategic level competency in this critical field.

THE CONCEPT OF CIVILIAN SUPREMACY IS SUPREME

Civil-military relations in a democracy are uniquely concerned that designated political agents control designated military agents.\(^6\) Acceptance of civilian supremacy and control by an obedient military is the most important principle of civil-military relations in democratic states. Indeed, the concept of civilian supremacy transcends political systems.\(^7\) Military professionals in all political systems share a mandate to be as competent as possible in their functional areas of responsibility in order to defend the political ends of their respective states. However, military professionals in service to democratic states face the added burden of maximizing functional competency without undermining the state’s democratic character.\(^8\) Officers in democratic states serve societies that have entrusted them with the mission of preserving the nation’s values and national purpose.

MILITARY-POLITICAL COLLABORATION REQUIRES DISTINCT ROLES AND RESPONSIBILITIES

Nearly all strategic level national security decisions occur in the civil-military nexus. This nexus includes interactions between the uniformed military, elected officials, political appointees, and career civil servants across the relevant government agencies and departments.\(^9\) Military-congressional interactions, or their equivalent in parliamentary systems, are also important relationships to cultivate. This could also include congressional staffers who often possess legislative expertise and may be influential actors in their own right. Legislative bodies in democracies are empowered with, at a minimum, some level of oversight, budgeting authority, and organizing power. They are also crucial for their proximity to the people and the importance of sustaining legitimacy for particular policies. This is especially true in wartime.\(^10\)

In the case of the United States, constitutional sharing and separation of national security related powers requires collaboration between the executive and the legislature. Military officials, uniformed and civilian, have the responsibility to provide expert advice to their “masters” in both the executive and legislative branches. Power sharing of some kind over the use of force and regulation of the military institution is typical of all democratic systems. However, there are distinct differences in the responsibilities of political and military agents in the policy collaboration process stemming from differences in their constitutional roles.

Additionally, there are distinct differences in political and military agents’ political and military competencies. Political agents are likely to have greater experience in the strategic and political dimensions of national security policy, while military agents will be more rooted in the technical expertise and operational knowledge related to the use of force.\(^11\) National security policy outcomes are optimized when participants on both sides of the relationship commit their respective military
and political competencies to the task at hand and subsequently collaborate in the processes of policy and strategy formulation, execution, and adaptation.

Ideally, the result is a carefully vetted policy that has benefited from the contributions of the relevant military experts and also reflects the careful assessment of the civilian national leadership cognizant of the domestic political and international strategic environments. Such collaboration requires constant professional development for all national security professionals involved.

The advice of military actors will be on more solid footing if it stems from some degree of understanding the strategic and political contexts that form the civilian leadership’s decision-making backdrop. Colin Gray argues that achieving effective dialogue between the civilian national leadership and its generals can be difficult. “Politicians and generals tend to lack understanding of, and empathy for, each other’s roles. It is not so commonplace to notice that politicians and generals are often less than competent in their own sphere of responsibility, let alone in the sphere of the other.” Developing senior officers with the ability to formulate sound military advice and civilians capable of strategic thinking requires institutional support for appropriate career broadening assignments such as opportunities for military officers and civilians to study and teach in the military education system. Civilian graduate education is also important and should be recognized in both the civilian and military promotion systems.13

Civilian leaders with greater familiarity of the military sphere will be better equipped to choose among competing proposals and to perhaps suggest that a viable option is missing. A particular military competency that would serve the civilian leadership especially well is mastery of the strategic thought process that is the foundation of senior military leaders’ decision making. Military actors, in turn, will benefit from exposure to the broader strategic and political environment. Such experience will temper their military advice with important contextual knowledge.

However, the distinct responsibilities of military and civilian actors must always be maintained. The responsibility for national policy decision making cannot be ceded to military actors, regardless of the perception of the military leadership’s expert knowledge. Civilian national leaders, especially the President, should be careful not to blur the vastly different scopes of political and military decision making. Senior officers must keep in mind that they render advice to elected officials responsible for the nation’s overall national policy. Such policy decisions must take into account the feasibility and political sustainability of various courses of action.

Civilians should also recognize their responsibilities related to managing the civil-military climate. As Richard Kohn noted, “civilian officials have every incentive to establish effective collaborative relationships with the senior military leadership.” These norms governing civilian participants’ behaviors focus on fostering trust and respect between the civilian and military professional spheres. Civilians will benefit from taking the time to recognize the military’s unique cultural attributes and values. Awareness of the military’s standards of professionalism such as its preference for apolitical service, its expectation of accountability, and the military leadership’s role to provide its best professional advice strengthens military-governmental collaboration.

PROFESSIONAL RESPONSIBILITY TO DEVELOP NORMS GOVERNING CIVIL-MILITARY BEHAVIOR LIES WITH THE PROFESSION

Developing a widely shared set of norms regarding civil-military behaviors is the responsibility of the military profession. Civilians also have a professional responsibility to promote a favorable climate for civil-military relations. As noted earlier, first among the professional norms is acceptance of the principle of civilian supremacy. Related norms govern principles for voicing military dissent in the policy process, standards for participation in partisan political processes, and expectations for the political behavior of retired members of the profession.16
The Bounds of Dissent.

Collaboration between military and civilian national security professionals maximizes the competencies of each. However, legitimate disagreement is common in any collaborative decision-making process. Civilian policymakers should encourage military professionals to offer their best advice and not punish military participants who work within the established bounds of dissent in the democratic national security decision making process. Military leaders should expect that their professional military judgment is heard, but they must also recognize when their actions exceed the bounds of dissent.

When acts of dissent take military leaders beyond their roles as advisers to the civilian leadership to become political actors themselves, then the limits of dissent have been exceeded. When military and civilian leaders have different policy preferences it may be possible for the military to, in effect, achieve its desired preference through willful nonimplementation of the policy or by inappropriately influencing the public political debate. Military professionals must guard their behavior when they think their judgment is superior to the civilian agents, who have the authority and responsibility to make policy decisions. In democracies, who makes such calls may be more important than the call itself for the continued viability of the democratic process.

At the same time, military professionals must step up to their responsibilities to assert their strategic expertise. Such inputs influence strategic deliberations and continue throughout the process of strategy adaptation that may be necessary in the execution phase. Questions related to the role of the senior military leadership in policy deliberations were prominent in H. R. McMaster’s indictment of the Joint Chiefs in *Dereliction of Duty: Lyndon Johnson, Robert McNamara, the Joint Chiefs of Staff, and the Lies that Led to Vietnam*. Lieutenant Colonel Paul Yingling raised parallel questions of accountability to the current generation of general officers. His *Armed Forces Journal* essay criticized senior military leaders for providing insufficient advice to the civilian leadership crafting Iraq War policy. Yingling argued that such actions contributed to the war’s policy failures.

A robust civil-military curriculum would also include discussion of the role of resignation as a form of dissent. As Richard Kohn and Richard Myers recently argued, “There is no tradition of military resignation in the United States, no precedent—and for good reason.” Other analysts have criticized the military for not playing the “resignation card” as a route to influence policy and strategy outcomes. Members of the profession should explore these arguments and begin to develop their strategies for expressing disagreement in ways that do not disadvantage their subordinates and their profession, or infringe on civilian control.

Understanding civil-military roles in the policy process and effective leverage of military expertise in civil-military interactions is a critical variable for successful policy outcomes. Managing disagreement across the civil-military spheres is an important strategic leader competency that, in turn, raises key ethical and professional questions.

The Perils of Partisan Politics.

The perception that the American officer corps has become increasingly “Republicanized” came to the fore in the 2000 presidential election raising questions about the tradition of an apolitical military. Limiting participation in politics to the military advisory role and balancing rights as citizens poses a challenge for the military profession. A key element in this balancing act is the management of society’s perceptions of the military as an institution. The ethic of the “policy relevant nonpartisan” is a critical civil-military norm. At stake is the military profession’s servant
relationship with society. Implications also exist for maintaining the legitimacy of the military’s special status in society as “managers of violence.”

Other Areas in Need of More Explicit Civil-Military Norms.

Expectations regarding the political behavior of retired senior officers continue to vary across a broad spectrum. There was mixed reaction to what has come to be known in recent political-military folklore as “The Revolt of the Generals”—the April 2006 uncoordinated protests of newly retired general officers calling for the dismissal of Secretary of Defense Donald Rumsfeld over the planning and conduct of the Iraq War. While some criticized these actions as undermining civilian control, others lauded the retirees for speaking out, if belatedly.

Varied reactions among retirees in the profession indicated the lack of a professional consensus regarding the continuing legal and moral obligations that retirees are expected to fulfill. What norms should be established for retired officers serving as media commentators, especially with regard to analyzing ongoing operations? In addition, the profession also lacks consensus on what is appropriate regarding partisan politicking among the retired general officer ranks. Some have called for prominent retirees to consider the effect that “taking sides” in political campaigns has on the profession. The senior members of the profession still serving on active duty as stewards of the profession’s norms can help to set expectations in these areas.

PATTERNS OF CIVIL-MILITARY RELATIONS VARY ACROSS POLITICAL SYSTEMS

The study of civil-military relations is relevant across political systems. Advanced democracies, authoritarian states, and the range of developing, failing, democratizing, and de-democratizing states in between, all face the challenge of managing and leveraging the military as a political actor. The different parameters operative in various political systems result in different patterns of civil-military relations.

Influence Advocacy Makes Policy Governs
(expertise) (policy veto) (limited arenas) (complete control)

Civilian CC undermined Limited Military Rule
Control (CC) Military Control

Figure 1. Spectrum of Military Participation in Politics.

Advanced democracies have the luxury of mature democratic institutions, the best barrier to praetorian rule. Post-authoritarian regimes, such as the post-communist states of Central and Eastern Europe and the former military regimes of Latin America, carry the burden of undertaking transitions to democracy with legacies of authoritarian rule still operative across society and the political system. States rebuilding or creating their institutions from scratch in post-conflict scenarios such as Iraq and Afghanistan must be careful that institutional development matures in a balanced fashion ensuring continued political control over the military. In countries struggling to achieve greater standards of economic development, democratic institutions may still be weak and governance poor, tempting the military to intervene.
Understanding Military Rule and Praetorian Behavior.

Familiarity with the works of such giants in the field as Samuel E. Finer and Alfred Stepan would benefit strategic leaders interested in understanding the rise and fall of military regimes and the often predictable patterns associated with them. Praetorianism refers to the overstepping of accepted limits of military participation in the political process. The principle of civilian supremacy is rejected in order to force the military’s prerogative to prevail in the political system. Such behavior relies on military coercion as a means of short-circuiting the political process in order to achieve the military’s short-term institutional interests. This may involve asserting power through a coup to displace the elected government and install either civilian leadership more favorable to the military or direct military rule. Exercising de facto policy vetoes behind the scenes through the threat of force to ensure that the military’s policy preferences prevail over the civilian leadership’s is another praetorian tactic.

Finer’s study of military regimes in Latin America and Africa led him to develop frameworks useful for predicting the conditions under which military institutions exert political power, and in some cases, overthrow civilian governments. He focused on the attributes of military institutions that seem to be compatible with effective and efficient governance such as technical expertise, non-partisanship, control of vast personnel and other military resources, discipline, and commitment to the national interest. Such traits seemingly predict that military rule may often be successful. In reality, when observers such as Finer tally the results, the findings point to the near certainty that military rule will leave a state in worse shape than when the military first intervened. Here the explanation also lays in the attributes of the military institution, this time those that are incompatible with effective governance. Leading the way among these factors is the distaste for politics and the political process, intolerance of dissent, which leads to repression and decreased legitimacy, and lack of the broad expertise needed to effectively govern.

Praetorian behavior is possible in states with weak democratic institutions and weak civil societies that are collectively unable to pose a sufficient barrier to military coercion. The subsequent intervention inevitably further weakens democratic institutions and sets a precedent that is often repeated, leading over time to underdeveloped states. The long-term potential for effective governance is sacrificed as the military stunts the development of civilian capacities to rule while offering instead its version of authoritarian or semi-authoritarian rule lacking the accountability and expertise essential to good governance.

CIVIL-MILITARY RELATIONS AND STRATEGIC CULTURE

There is also a strategic-cultural dimension to civil-military relations. Understanding the norms governing the civil-military relationships in states as well as the varied interests of armed forces, society, and the government is a prerequisite to understanding a state’s national security strategy. Important questions to explore include, “Which actors dominate the process of formulating national security policy and strategy? and, “How synchronous are the interests of the government, the people, and the armed forces?” Furthermore, “Are the political institutions regulating civil-military relations mature or is the political system vulnerable to personality-based politics and/or seizures of power as evidenced in praetorian politics?”

Past and present behavior of states in the international system cannot be fully understood without some knowledge of the role of the military in the state. Authoritarian states prioritize the importance of ensuring that the military and political elites’ interests are one, usually at some sacrifice of military professionalism and effectiveness, in order to ensure civilian control. States with
a history of military rule or strong influence in politics will have this experience as a permanent dimension of their political culture. For instance, Latin America has emerged in recent decades from an era of near total military rule. Recent scholarship focuses on how these periods of military rule have cast a shadow on current politics and explain different degrees of success in building democratic institutions.

On the other hand, some states, although still developing, such as India, have a strong tradition of non-interference in political affairs. However, when Pakistan broke away from India in 1947, its military established a tradition of continual influence in political affairs and long periods of military rule. Many scholars argue that such interference has stunted the democratic development and overall performance of subsequent Pakistani regimes. Indeed, at the time of this writing, national security actors are trying to assess the continued role of the military in Pakistan as President Pervez shed his uniform and appointed a new Army Chief to succeed him.

CIVIL-MILITARY RELATIONS AND SECURITY COOPERATION

Military and civilian officials in the service of advanced democratic states may consider themselves to be immune to the challenges of praetorianism. However, such officials serving abroad are likely to find many opportunities to influence the civil-military relations of other states. Representatives of states’ national security apparatuses often come in contact with each other through multinational operations or various other engagement opportunities made possible through security cooperation programs. These “military to military” meetings often involve interactions between defense personnel from different types of political systems. Senior officers and national security professionals in possession of sound civil-military knowledge can leverage these engagements to facilitate the national security objectives of all parties. Increasingly, military professionals are engaging civilians in the course of carrying out their strategic responsibilities. This is particularly true in post-conflict stability operations and state-building missions.

It is in such opportunities that the linkage of military objectives and overall strategic political objectives may come into play. For instance, military personnel from advanced democracies assigned to build and train armed forces, as NATO and coalition forces are presently doing in Afghanistan and Iraq, must be cognizant of their responsibility to foster armed forces steeped in the values of governmental control and democratic military professionalism. Strategic leaders with such responsibilities should be able to link their military-to-military engagement with the overall strategic objective of building robust democratic national security institutions. Important questions to ask include, “Are external trainers focusing exclusively on building military competencies to the exclusion of political competencies? Are military personnel being taught the fundamentals of interacting with the civilian national leadership? Is proper emphasis being placed on building the relationship with society at large, to include the media?”

The military leadership of these nascent national armed forces, in turn, must set the example in terms of loyalty to their constitution and commitment to fostering the development of democratic national institutions. The overall strategic objective shared across the spectrum of actors, external and internal alike, is building a democratic state with an armed forces capable of defending its interests. Yet history bears out that military intervention is a great threat to the sustained development of democratic institutions in developing countries. The record warns that once the pattern of intervention is begun, restoring the state to the path of sustained democracy is more unlikely.
THE ARMED FORCES AND SOCIETY

The relationship between the armed forces and the societies they serve is a key concern of civil-military relations scholars. The worldwide trend away from conscripted armed forces to professional militaries, favored by most societies that can afford them, has great implications for military-society relationships. In this time of war, less than 1 percent of the U.S. population serves in the military. This figure contrasts sharply with previous American wars in times of conscription. Four percent of the population served during Vietnam, 12 percent in World War II, and 11 percent in the Civil War. The reality of the lack of shared sacrifice risks the sustainability of the war effort for practical reasons such as the lack of deployable troops over many rotation cycles. Also at risk is the war’s political sustainability. Military sociologist David Segal has noted, “In a democratic society, the army is a people’s army, a reflection of the popular will.” However, at present Segal warns, “The military is at war, but the country is not. And the military resents that.”

At issue is the notion of citizenship and national obligation. The resentment David Segal noted stems from the reality of the growing gap between American society and those who choose to serve it. Journalist Tom Ricks observed in his 1997 book Making the Corps that demographic data as well as his immersion in military culture suggested that the military is increasingly no longer “of” society, but becoming “separate” from it. The separate lives of America’s warriors and its citizenry can spawn resentment, stereotyping, and even hostility across the civil-military spheres. With the children of America’s policymaking elite virtually absent from the military ranks, and the children of American families at both the extremely affluent and extremely disadvantaged extremes either opting out of or failing to qualify for military service, what has come to be called the “civil-military gap” is growing.

The media is an often underappreciated and misunderstood tool critical to managing the “civil-military gap.” The media is one of the chief links between the military institution and the society it serves. Healthy interaction with the news media reflects both an understanding of the media’s function to inform the public and ensure accountability of government institutions. Well managed military-media relations can also highlight the military’s effectiveness and opportunities, drawing more citizens to the military.

The experience of embedding reporters in military units in the Iraq War highlighted the different cultures of the military and the media. “Members of the military are trained to do what they are told. Members of the media are trained to challenge and question everything.” As one correspondent noted, “What that means, in the end, is that we really have to develop strong relationships. One of the most invaluable experiences I had was to learn who the men were … and to develop a relationship and trust and honesty that developed through the several weeks that we were together.” Furthermore, democratic military professionals should appreciate and seek to facilitate the press’s function in a democratic society, and, at a minimum, refrain from actions that undermine the role of the media in the American political system.

Yet another important civil-military competency to be honed, then, is the management of the military-societal relationship. Military and civilian leaders have the responsibility to bridge the civil-military gap. Their actions can be guided by first principles undergirding civil-military relations in democracies, such as the desirability of having all segments of society participate in military service. Professional militaries, dependent on the willingness of volunteers to serve, must invest in robust outreach and public relations programs. Another essential principle is to embrace the requirement to be transparent, accountable, and nonpartisan in order to make certain that the military institution is “of” its society and focused on its role in achieving the national interest and the democratic character of the state.
STRATEGIC IMPLICATIONS AND CONCLUSIONS

Strategic leaders with a comprehensive understanding of civil-military relations in all its dimensions are more likely to make effective contributions to effective national security outcomes. Indeed, The Iraq Study Group Report pointed to improving civil-military relations in the policy formulation arena as a critical component for restoring the U.S. military.

The U.S. military has a long tradition of strong partnership between the civilian leadership of the Department of Defense and the uniformed services. Both have long benefited from a relationship in which the civilian leadership exercises control with the advantage of fully candid professional advice and the military serves loyally with the understanding that its advice has been heard and valued. That tradition has frayed, and civil-military relations need to be repaired.

RECOMMENDATION 46: The new Secretary of Defense should make every effort to build healthy civil-military relations, by creating an environment in which the senior military feel free to offer independent advice not only to the civilian leadership in the Pentagon but also to the President and the National Security Council, as envisioned in the Goldwater-Nichols legislation.32

Perhaps as important as enhancing the prospects of strategic success is the parallel goal of preserving the democratic character of the state and the critical underlying dynamic between the government, the people, and the armed forces. The range of civil-military competencies to be developed is great. The first steps toward acquiring them are to recognize the professional imperative to do so and the scope of the task at hand. The unique nature of the military profession places much of the responsibility for the development of civil-military competencies and norms in the lap of the profession itself. Gaining civil-military competencies must rank among the life-long professional pursuits of strategic leaders.

14. The strategic thought process is simply a problem solving rubric focused on the fundamental question, “What do I want and how can achieve it?” When analyzing issues and problems the strategic thought process focuses on the calculated relationship between Ends, Ways, and Means. Ends, Ways, and Means may alternatively be stated as objectives, concepts for achieving the objective, which is sometimes stated as a Course of Action, and resources. This model is a staple of the U.S. Army War College strategy curriculum.

CHAPTER 19

NEW REQUIREMENTS FOR A NEW CHALLENGE:
THE MILITARY’S ROLE IN BORDER SECURITY

Bert B. Tussing

No one seems to underestimate the urgency of the requirement. Nor have they since before September 11, 2001 (9-11).

The United States Commission on National Security/21st century, commonly known as the Hart-Rudman Commission, recommended that the Executive Branch establish a “National Homeland Security Agency.” Among other things, this agency would encompass the Customs Service, the Border Patrol, and the U.S. Coast Guard in a synergistic environment to patrol U.S. borders and police the flow of peoples and goods through hundreds of ports of entry.1 When the legislation that led to the Department of Homeland Security (DHS) was penned, Border and Transportation Security was one of the original five under-secretariats. When Secretary Michael Chertoff came to town, he entered the Department with “six priorities”; the third of those was to “strengthen border security and interior enforcement. . . .”2 The new Secretary would make his concerns clear as he unveiled a new organizational structure that would remove bureaucratic layers between his office and Customs and Border Protection as part of an effort to:

. . . gain full control of our borders to prevent illegal immigration and security breaches. Flagrant violation of our borders undercuts respect for the rule of law and undermines our security. It also poses a particular burden to those in our border communities.3

Institutionally, the requirement for a robust border security mechanism seemed clear.

Functionally, the requirement was even clearer. In the best of times, under the best of circumstances, the need for diligence at the border is compelling.

On a typical day, more than 1.1 million passengers and pedestrians, including 635,000 aliens, over 235,000 air passengers, over 333,000 privately owned vehicles, and over 79,000 shipments of goods are processed at the nation’s borders.4

Taken together, every year U.S. Customs and Border Protection (CBP) processes nearly half a billion people, 130 million trucks and cars, and 20 million cargo containers through 325 ports of entry.5

Curiously enough, however, the immensity of the daily requirement is not the most compelling factor among concerns over the security of the border. What is described above is the routine, legitimate traffic. This allows for the free flow of visitors and commerce, keeping open the doors of the “land of opportunity,” and coincidentally, sustaining much of the economy. The greater concern for security lies beyond these factors in an accompanying flow that does not seek legitimate opportunity, but criminal gain; that is not interested in sharing the American way of life, but in undermining it and the institutions and values that sustain it. A report developed in the House of Representatives’ Committee on Homeland Security offers an interesting and potentially ominous contrast:

During 2005, Border Patrol apprehended approximately 1.2 million illegal aliens [along the Southwest border between the United States and Mexico]; of those, 165,000 were from countries other than Mexico. Of the non-Mexican aliens, approximately 650 were from special interest countries.667
The threat along the northern border, while far less publicized, is nevertheless cause for concern—perhaps equal concern, perhaps greater. In 1988, U.S. Customs officials arrested three members of a Syrian terrorist group linked to al-Qaeda in the process of entering the U.S. with explosives. Members of the terrorist cell that executed the 1993 attack on the World Trade Center (who would eventually train for the attack in Perry County, Pennsylvania) entered the U.S. from Canada, and were planning to use Canada as a possible escape route. In December 1999, Ahmed Ressam was arrested crossing into the United States in possession of bomb making materials and plans that would have played out in what became known as the Millennium bomb plot against Los Angeles International Airport. Ressam would be characterized by the State Department as a textbook example of someone who “capitalized on liberal Canadian immigration and asylum policies to enjoy safe haven, raise funds, arrange logistical support, and plan terrorist attacks.”

And the past, we have every reason to fear, may well be prelude, as pointed out by Dr. Todd Hataley of the Royal Military College of Canada:

In the post 9/11 period Canada has continued to raise security concerns in the United States. U.S. security officials believe that Canada is not only home to “sleeper cells” waiting for a chance to cross the border and attack the United States, but also that crossing from Canada has become a favorite route for illegal immigrants, drug smugglers, and potential terrorists.

The Military in (Limited) Support.

Juxtapose this history against a northern border that stretches nearly 5,000 miles, and a southwestern counterpart that runs another 2000, and the challenge confronting CBP is daunting, to say the least. In October 2006 there were 11,000 agents assigned to watch and protect both sets of borders. In May 2006, the Administration embarked on a plan to raise those numbers to over 18,000 by the end of 2008, increasing the total number to over 101% of the number that stood when the President took office in 2001.

Whether that number will be sufficient is debatable. Regardless, purposed increases do not meet the current requirement. The challenges that inspired these increases will continue until the increases can be brought about—if they can be remedied then. Accordingly, in May 2006, the Administration launched Operation JUMP START, a deployment of over 6,000 National Guardsmen from 48 states designed to “strengthen border security and encourage deterrence.” David V. Aguilar, Chief of the Office of Border Patrol for CBP testified on the nature of the Guard’s mission before members of the House Homeland Security Committee:

. . . National Guard units will assist DHS by executing missions such as logistical and administrative support, operating detection systems, providing mobile communications, augmenting DHS’s border-related intelligence analysis efforts, building and installing border security infrastructure, providing transportation and training.

It is important to note, however, that while the presence of the Guard will allow CBP agents to return focus to law enforcement activities along the border, the troops will not join the agents in those activities. At the same hearing, Chief Aguilar was quick to remind the Congressmen of one clear distinction between the National Guard and the CBP mission.

However, law enforcement along the border between the ports of entry will remain the responsibility of Border Patrol agents. The National Guard will play no direct law enforcement role in the apprehension, custodial care or security of those who are detained.
This pronounced distinction in the roles that the National Guard may assume in border operations may seem confusing. After all, the immediate requirement that caused the deployment of Guard seems to invite additional manpower on the border to assist in surveillance, intervention, apprehension, and arrest. DHS has celebrated the fact that 6,000 National Guardsmen allowed the Border Patrol to return 350 agents to “traditional frontline duties.” If that is the greatest cause for celebration, one might ask why the Guard could not be positioned on those “frontlines.”

Those slightly schooled in laws and regulations surrounding the issue of military support to law enforcement agencies may be even more confused. The hub of much of the discussion on this issue is the Posse Comitatus Act—legislation enacted in the aftermath of the Civil War that largely prohibits the use of the active duty armed forces in enforcing the domestic laws of the United States. Note, however, that the act only applies to federal forces. It does not apply to the National Guard, unless the Guard forces in question have been federalized (in other words, mobilized under Title 10 of the United States Code to perform a federal mission). Title 10, for instance, is the authority under which National Guard units are serving overseas in support of the U.S. mission in Iraq. If the Guard forces are either in a “state active duty” status, or serving under the provisions of Title 32 of the United States Code (a status that sustains the forces with federal funds but leaves control with the state governors and their Adjutants General), National Guard forces may serve in a direct law enforcement function. Given that, why the distinction and restriction in the ongoing border operations? Perhaps even more to the point: Why restrict the military—active or reserve—from directly supporting the law enforcement function of the border security mission?

Soldiers — Not Policemen.

The motivation behind the restriction is, perhaps, uniquely American, and embedded in the national mindset. Simply stated, the people of the United States do not want their soldiers to be policemen or their policemen to be soldiers. One can trace the philosophical underpinnings of this aversion to the colonies of the pre-Revolutionary War. In those days, the colonists were repulsed by oppressive measures like the Quartering Acts that cast the British forces in the role of overseers and even oppressors. The same attitudes would emerge during Reconstruction following the Civil War, when the federal military was used as an occupying force in the former Confederate states. These historic examples—combined, perhaps, with persistent images of military oppression that accompanied much of the country’s immigrant ancestry from overseas—help us understand our citizenry’s aversion. Too much of a military presence for too long in their streets seems to rekindle a dormant response in Americans. Consider, for instance, what may be thought of as the subliminal reaction to the presence of the military in the nation’s airports following 9-11. Initially the sight of soldiers along the concourses of O’Hare and Kennedy International kindled a sense of assurance and accompanying goodwill. But people were soon asking themselves, “Why are these military people here with those rifles and that equipment?” The truth is that Americans have conflicting attitudes about the military. We appreciate their sacrifice. We acknowledge their dedication. We take pride in their prowess and the virtue of their leadership. But we are dedicated to the proposition that soldiers will ever remain the servants of the people and not their overseers.

Fortunately, no one is more sensitive about the military’s role than the military’s leadership. The clear distinction between the roles and responsibilities of law enforcement and the military is ingrained in the mindset of its generals. Any number of reasons could be cited for this sensitivity, beginning with the fact that the country’s all-volunteer force is very much a military “of the people” and therefore very much “for the people.” Moreover, the most senior leadership currently directing our armed forces came of age as young officers in the Vietnam era. These, with their soldiers, sailors,
airmen, and Marines, undeservedly bore the derisive brunt of much of a society turned sour on the war. In the same time period, reports of the Pentagon gathering intelligence against anti-war groups further broadened the divide between America and her military. Institutional assurances were put in place in the 1980’s to prevent this type of surveillance from ever occurring again; but having survived that era of distrust, the current uniformed leadership is keenly aware of how important the support of America’s citizenry is to its soldiers . . . and how fragile.21

Nothing New in the Requirement?

Having said all that, Chief Aguilar reminds us that border security operations involving the National Guard is not a unique requirement to the new century:

Let me first state that National Guard support and coordination with DHS and the Border Patrol is nothing new. While this new infusion will be on a larger scale, the Border patrol has a history of nearly two decades working with National Guard units to utilize their unique expertise, manpower, technology and assets in support of our mission and as a force multiplier.22

In fact, recent history witnesses the U.S. military’s involvement in border security operations not only by the National Guard, but by the active duty component as well. In response to a growing connection between border security and counternarcotics programs in the 1980s, President Ronald Reagan signed a National Security Decision Directive that simultaneously described drug trafficking as a threat to national security and authorized military involvement against it.23 In 1989, the military’s Joint Task Force 6 (JTF-6) was created to coordinate the expanding support for “the anti-drug efforts of border region police agencies, including the Border Patrol.”24 As with the Guard’s current mission, this task force would eventually play an important role in constructing physical barriers designed to slow or channel the flow of illegal immigrants. Unlike the current Guard commitment, JTF-6 also deployed aviation assets and ground troops along the border.25

Support for the military’s role along the border continued through the 1990s. In 1991, Congress passed key legislation that allowed the Department of Defense (DoD) to support any agency of the federal government with counterdrug responsibilities. More noteworthy yet, the legislation opened the way for DoD to support state and local government law enforcement agencies toward the same ends.26 And in 1997, the United States House of Representatives passed a resolution calling for the deployment of 10,000 additional troops in support of counterdrug operations along the southwest border.27

Tragedy was to interrupt the final passage of that resolution. On the evening of 20 May 1997, 18-year-old Ezequiel Hernandez, Jr., was herding goats when he was mistakenly shot by the leader of a Marine rifle team observing an area of the Rio Grande known for its illegal drug trafficking. The Marines were members of JTF-6 and had been acting in support of the Border Patrol. They had received no civilian law enforcement training or briefings on local conditions.28 They acted in accordance with the standing rules of force, and were eventually found innocent of any wrongdoing. But the heartbreaking accident would change the nature of the operation decisively.

The outcry against the tragic occurrence would eventually subside across most of the social landscape, but not from the perspective of the military. Returning to a degree of reticence that surpassed its civilian masters, the Pentagon’s uniformed leadership withdrew its armed forces from the border and levied new restrictions that would cast the military in a predominantly technical-support capacity. In the future, JTF-6 would be redesignated Joint Task Force-North, and the personnel-intensive, boots-on-the-ground support provided by the unit in the 1990s would be replaced along the border with ground sensors, radar, airborne platforms, and thermal imagery.
Deliberately postured in support of federal, state, and local law enforcement entities, the command’s website notes that its technological focus has allowed for a reduction in manpower requirements. The most significant reduction came in terms of troops on the ground. This would largely characterize the military’s role for both the active and reserve components from the time of the tragedy in Texas until the calamity of September 11, 2001. In the aftermath of the attacks on the World Trade Center and the Pentagon, immediate steps were taken to reinforce the security of the nation’s borders. At entry points from both north and south, the President commanded the deployment of roughly 1,600 National Guard troops for six months to support federal border officials. New emphasis on maritime and aviation security along, within, and through the approaches to the borders accompanied increased land border security, and were formalized in interagency strategies.

In the midst of these events, the U.S. Northern Command (NORTHCOM) was established on October 1, 2002 “to provide command and control of Department of Defense (DoD) homeland defense efforts and to coordinate defense support of civil authorities.” The new combatant command, primarily responsible for active service components’ activities within the domestic confines of the United States, was charged in their mission statement to:

Deter, prevent, and defeat threats and aggression aimed at the United States, its territories and interests within its assigned area of responsibility; and as directed by the President or the Secretary of Defense, provide military assistance to civil authorities, including immediate crisis and subsequent consequence management operations.

This mission statement instantly distinguished the new command from its counterparts overseas. The first part of the mission was reasonably clear, if ominous. “Deter, prevent, and defeat” could be realistically expected as part of a military mission anywhere around the globe. The U.S. armed forces identify with this language and are fully prepared to do whatever is required to fulfill its implications. But the second half of the command’s mission statement—euphemistically referred to in the Pentagon as the “right of the semicolon” requirement—is less intuitive, and arguably more complex than the first. The powerful segue, “as directed by the President or the Secretary of Defense,” is indicative of a very measured approach to this part of the mission. Placing the military in support of civil authorities will concurrently place them in activities normally conducted and controlled by those authorities. And the closer the military comes to controlling civil activities, the less comfortable it finds the mission.

A Shift in Focus: Counterdrug to Counterterror.

The military’s directives support its reticence. Civil support is characterized by the Department of Defense as granted in response to domestic emergencies and “for designated law enforcement and other activities.” However, the DoD directive regulating military support to civilian law enforcement agencies specifically prohibits the use of the military for interdiction; search and seizure; arrest, apprehension, stop and frisk, or similar activity. Likewise, it prohibits the use of military personnel in the pursuit of individuals, or as undercover agents, informants, investigators, or interrogators. As the new structure of NORTHCOM was designed to meet the threat, along with a new office in the Department of Defense to oversee it, the support mission for the military along the border was also changing. JTF-6, as previously noted, was redesignated JTF-North. This change in designation would mirror a change in focus away from counterdrug operations to countering transnational threats. Persistent, legitimate concerns about drug trafficking were being overshadowed by
revelations of looming threats to our north and south. With respect to Canada, as early as 1998, the Special Senate Committee on Security and Intelligence labeled the country

. . . a “venue of opportunity” for terrorist groups: a place where they may raise funds, purchase arms, and conduct other activities to support their organizations and their terrorist activities elsewhere. Most of the international terrorist organizations have a presence in Canada. Our geographic location also makes Canada a favorite conduit for terrorists wishing to enter the United States, which remains the principal target for terrorist attacks worldwide.37

More recently, the same committee reported that “[a] relatively large number of terrorist groups [is] known to be operating in Canada, engaged in fundraising, procuring materials, spreading propaganda, recruiting followers, and conducting other activities.”38

To the south, there is growing concern over efforts to transplant elements of international terrorist organizations among our closest neighbors. In May 2001, Adolfo Aguilar Zinser, former Mexican National Security Adviser and ambassador to the United Nations warned that “Spanish and Islamic terrorist groups are using Mexico as a refuge.”39 General James T. Hill, former commander of U.S. Southern Command, warned that the U.S. faces a growing risk, both from terrorist groups relocating to Latin America and “homegrown” groups originating therein. He warned specifically that Hezbollah and groups like it had established bases in Latin America, taking advantage of nearly ungovernable areas like the tri-border region between Brazil, Argentina, and Paraguay.40 Add to these viable concerns over Venezuela’s support to radical Islamic groups, and the security concerns surrounding the well-being of the American people at home continue to grow.41

Unfortunately, as the military and the law enforcement agencies it supports along the border have moved to confront this new concern, they can ill-afford to ignore the old concerns. As though adding to the population of a snake pit, the arrival of terrorists has done nothing to thin out the presence of drug traffickers among the cartels. Neither has it had an effect in reducing other organized criminal activities like human trafficking, or diminishing the immigration of criminal gangs through Mexico into the United States. A majority report from the House of Representatives Committee on Homeland Security gave voice to these concerns, warning against “the triple threat of drug smuggling, illegal and unknown crossers, and rising violence” facing our communities in the southwest.42

Criminals involved in this activity have taken on an air of arrogance that should further spur the nation’s concerns. The aforementioned House study validates frequent reports that the cartels may be literally “outgunning” local law enforcement agencies on both sides of the border, possessing military grade weapons, technologies and intelligence, and their own “paramilitary enforcers.”43 The enforcers usually restrict their activities to actions against rival factions, but not always. In 2005, just hours after being sworn in as Nuevo Laredo Mexico’s Police Chief, Alejandro Dominguez was killed. Dominguez came to office on the promise of cracking down on the cartels.44

The threat across the border should be enough, but there are growing concerns that it cannot be contained there. Violence against U. S. law enforcement officials, from the Border Patrol to local law enforcement agencies, is rising at an alarming rate. From 2004 to 2005, violent incidents against Border Patrol agents on the Southwest border increased 108 percent. During fiscal year 2006 there were 746 violent incidents launched against these agents, including rock assaults, physical assaults, vehicle assaults, and firearm assaults. In March 2006, the House Judicial Committees’ Subcommittee on Immigration, Border Security, and Claims conducted a hearing addressing these concerns, noting a growing concern over law enforcement agents literally being “outmanned and outgunned” by criminal elements.45 In January 2008, a United States Border Patrol agent was run down and killed near the Imperial Sand Dunes in Southern California, by men suspected of drug and alien smuggling.46
General Barry R. McCaffrey, former director of the White House Office of National Drug Control Policy, commented on the disturbing partnership growing between crime and terrorism at the nation’s door.

These groups are drawn together because of their complementary capabilities. Terrorists can create chaotic circumstances that allow for illicit activities. Criminal organization have pre-established networks to move and sell narcotics and launder money.47

To date, this partnership has not taken on a character that would prompt a traditional “defense” response by the military. However, a recent report from Arizona indicates that concerns of that sort might not be as far-fetched as one might think. Officials at Fort Huachuca, the nation’s largest intelligence training center, changed security measures in May 2007 after being warned that Islamist terrorists, with the paid assistance of Mexican drug cartels, were planning an attack against the post. The plotters, up to 60 in number, were reported to be Afghan and Iraqi terrorists smuggled into the United States through tunnels with high powered weapons, including anti-tank missiles, Soviet-era surface-to-air missiles, and grenade launchers. The FBI will not elaborate on investigations surrounding the threat. Neither will they comment on other reports suggesting the “plot” was a Gulf cartel “plant” to bring the U.S. military in against a rival cartel. The bureau did acknowledge, however, that the report “demonstrates the cross-pollination that frequently exists between criminal and terrorist groups.”48

The immediacy of genuine defense concerns, as opposed to law enforcement concerns along the border, is certainly open to question. Nevertheless, the evolving intersecting threats of organized crime and terrorism, masked by the relentless challenge of illegal immigration across the nation’s borders, clearly present federal, state, and local government officials a dangerous and perplexing set of difficulties. Law enforcement agencies across all three levels of government have the lead in addressing the difficulties. The military has been and continues to be in support. But is the current role being played by the military—under the current circumstances, against the current threat—appropriate?

**Temporary, but Recurring?**

As though hedging bets, all discussion of placing the military in support of border security operations in the United States is consistently couched in terms of temporary requirements. Such was the case in 2002; such was the case again in 2006. It is clear that the current Administration is making an honest effort to retool Customs and Border Protection in terms of both technology and “boots-on-the-ground” to meet the broader threat that has emerged since 9-11. The functions that have characterized DoD support along the border — communications and logistical support, lending and operating detection and sensor systems, augmenting border-related intelligence analysis efforts, training, and so forth — are being reflected in the strategic plans of the Department of Homeland Security. Specifically, the U.S. Customs and Border Protection strategic plan lays out an objective to “maximize border security . . . through an appropriate balance of personnel, equipment, technology, communications capability, and tactical infrastructure.”49 DHS is clearly intent on putting resources behind its rhetoric, directing approximately half of its $5.4 billion information technology budget for 2008 toward developing and modernizing CBP’s capabilities.50 Ostensibly, the intent is to enable the organization to completely take control of that part of the mission the military has supplemented up to now. The question is, “Can we reasonably expect them to do that?”

Is it reasonable, for instance, to expect the Department of Homeland Security to duplicate the sensor capabilities that have been introduced in their support during this “period of transition?” Is it
feasible and/or advisable for them to reproduce the communication suites that have supported their operations along the southwest border since 2006? Is it fiscally responsible to match the engineer assets that the military has introduced in support of the mission over the last few decades . . . and the maintenance capability . . . and the training capacity? To be sure, DHS has means and capabilities to address all of these functions to a degree; but does it have enough means and capabilities to meet the requirement posed by the threat according to current assessments? And if it does, or shall soon, is it fair to assume that DHS will be able to fully meet the evolving requirement to address the evolving threat? Is it safe to make that assumption?

Planning for the Longer Term against a Variable Threat

I contend that it is not. The Department of Homeland Security’s current direction toward strengthening border security will not be, and can never be the final solution. Trying to empower a single federal agency with the ability to solve foreseeable challenges in this area is neither feasible nor advisable. Expecting military forces to continue to “stand in the gap” in their present capacity is also ill-advised—whether referring to the federal component (the active duty forces) or the “states militia” whose strength resides principally in the National Guard. A closer approximation of a solution to the evolving dilemma will begin with the realization that the border challenge must be addressed as a problem that varies with a variable threat (See Figure 1).

![Figure 1. Variable Scale of Border Protection.](image)

Experience has taught us that the lower end of that threat is embodied in massive numbers of illegal aliens, albeit ones without malicious intent (indeed, a significant amount of the nation’s concern in these regards is for the well-being of the aliens themselves). It is reasonable to assign day-to-day cognizance over that end of the threat to Customs and Border Protection as the clear, “lead federal agency.” As the threat moves further up the scale, introducing a frequently organized criminal element that we have seen trafficking in both drugs and human beings, we may envision a requirement literally calling for greater force. That force could begin with a concentration and
coordination of other law enforcement agencies (federal, state, and local). These, of course, would be keyed to their requirement by integrated information and intelligence from across the federal interagency. But they should also be served by mechanisms designed for intergovernmental intelligence and information exchange—up and down the chain between federal, state, and local authorities. The exchange would provide warnings and signals of the upper end of the threat spectrum, manifested in the confluence of organized crime and international terrorism. As suggested by Deborah Waller Meyers, the difference in responding to the variations of the threat at our borders may parallel the difference between border control (protection against the illegal entry of people and goods), border safety (protection against criminals, violence, smuggling, etc.) and border security (protection against terrorists).\textsuperscript{52}

Becoming bogged down by any discussion surrounding “responsibility” for the security of the border is counterproductive, at best. Rather, federal, state, and local government must arrive at a common understanding of what is needed to provide an acceptable level of security at the borders, and then determine means to provide that security that is feasible, affordable, and acceptable to the American people. Addressing the variable scale, therefore, begins in the federal government with an interagency plan, led by the Department of Homeland Security. The impetus for border protection that began with the consolidation in Customs and Border Protection must be continued to harness the support of other agencies—including but not limited to DoD—that have vital roles in meeting the complexities of the task. This will certainly include institutions like the Federal Bureau of Investigation and the Drug Enforcement Agency, whose traditional operations along both borders provide a background in both information and intelligence exchange with law enforcement. Multiple sectors of the intelligence community, led by DHS’ own Under Secretariat for Intelligence and Analysis, can provide the underpinnings of what the Department of Defense calls an “active, layered defense.”\textsuperscript{53} In turn, they will provide for the security of the nation’s borders, ideally well before the threat reaches them.

A stand-alone federal solution, however, will be doomed to failure. Governor Janet Napolitano of Arizona begrudgingly acknowledged as much when she declared:

\begin{quote}
States are not responsible for operational control of international borders; however, due to the dire situation that exists along the United States-Mexico border in Arizona, the state has had to act to preserve the rights and bests interests of its citizens.\textsuperscript{54}
\end{quote}

Concerns mirroring those of Governor Napolitano in the states of Texas, New Mexico, and California led to the Memorandum of Understanding signed between those states and DoD that is the foundation of Operation JUMP START. Comparable shared concerns between the states of New York, New Hampshire, Vermont, and the federal government led to similar agreements in the initiation and execution of Operation WINTER FREEZE in 2004.\textsuperscript{55}

Beyond these exemplary operations, a host of evolving mechanisms are being built to strengthen cooperative efforts between the three levels of government that could be trained against concerns for border security. The FBI’s Joint Terrorism Task Force offices located across the country (notably including Phoenix, San Diego, and El Paso) could certainly be applied toward these ends, bringing together representatives not only from state and local law enforcement, but agencies like the Bureau of Alcohol, Tobacco, Firearms, and Explosives, the Central Intelligence Agency, the Bureau of Immigration and Customs Enforcement, the U.S. Coast Guard, and DoD. Likewise, State Fusion Centers, financially sponsored by development grants from the Department of Homeland Security, are already serving as a primary conduit for information exchange.

The military’s role in the solution set that will be required this combined interagency and intergovernmental solution may be occasionally cumbersome for the services, but is inescapable.
The expected transition described by the Bush Administration as the impetus behind Operation JUMP START may begin to solve the immediate problem at the lower end of the variable scale, but it should not be relied upon to address the middle and upper tier concerns. Even assuming that CBP receives a significant infusion of resources that will provide technological solutions, that infusion will not take place overnight. The equipment and expertise currently being provided by the military will, at least for the time being, remain a requirement.

Moreover, technology can only serve to complement boots on the border; it cannot replace them. Whether focused on interdicting the threat or — more ideally — deterring or preventing illegal transit, it is the physical presence of people that will actually accomplish the desired function. Again, DHS recognizes this reality and, along with the infusion of funds provided for technology along the border, it is asking for an increase of $442.4 million to hire, train and equip 2200 new Border Patrol agents. Again these planned increases will not translate into immediate reinforcement along the borders. Moreover, when spread across more than 7,000 miles of border to our north and south, the layer of protection provided by these 2,200 new agents may be exceedingly thin. Therefore—even if only addressing the steady-state, lower-end requirement suggested by the variable scale—sufficient numbers for accomplishing this mission may only be available if the military remains actively engaged.

Keeping the military engaged and, as necessary, bolstering that engagement, will present a series of questions. First, the nation’s leadership must decide which component of the military is best suited to address the issue along our variable scale: the active duty forces, the National Guard, or both? Next, the leadership will have to address the relative capacity of those forces to take on these responsibilities. And finally, having addressed the feasibility of the requirement, we will have to return to the question of whether such engagement is advisable and, most importantly, acceptable to the American people.

Active Duty Forces.

Recent tradition shows that if an active component organization is involved in civil support, its role is specialized, and its numbers are small. A good example is the United States Marine Corps Chemical-Biological Incident Response Force (CBIRF). The CBIRF’s mission requires it to respond to credible threats of a chemical, biological, radiological, nuclear, or high explosive yield incident in order to assist local, state, or federal agencies. The unit lists an impressive array of capabilities to include agent detection and identification, casualty search and rescue, personnel decontamination, and medical care and stabilization of contaminated personnel. However, the unit is composed of only 350 personnel, and its mission is focused exclusively on CBRNE (Chemical, Biological, Radiological, Nuclear, or High Explosive Yield) incident response. The United States Northern Commands Joint Task Force for Civil Support (JTF-CS) was also designed as a very specialized force dedicated to planning and integrating consequence management support from the Department of Defense to civil authorities following such an incident. However, the task force is essentially a command and control entity without assigned forces or dedicated transportation. In the event of an actual crisis, necessary personnel would be attached to JTF-CS to handle manpower intensive requirements alongside the specialized requirements the unit is uniquely qualified to fulfill.

Joint Task Force North, as already noted, is much more directed to matters associated with the concerns of this chapter. The mission statement of the organization reiterates its relevance here.

As directed, Joint Task Force North employs military capabilities to support law enforcement agencies and supports interagency synchronization within the United States Northern Command area of responsibility in order to deter and prevent transnational threats to the homeland.
As is the case with much of the current National Guard mission along the southwest border, JTF-N has frequently assisted law enforcement efforts by means of detection and monitoring missions and by facilitating engineer support. JTF-N processes and prioritizes requests and then sources them through appropriate active duty units.\textsuperscript{61} In addition to these roles, however, the task force has played an important part in providing intelligence analysis and information sharing with federal, state and local law enforcement agencies; other federal interagency partners; military units in support (from both the active component and the National Guard); and (when authorized and appropriate) Canadian, Mexican, and other international partners.\textsuperscript{62} Beyond such support, the task force has a history of conducting collaborative planning with federal, state, and local law enforcement agencies. This ability to plan for complex operations incorporating bi-national, federal, state, and local stakeholders, highlights a core competency of the military that continues to prove more-than-beneficial in civil support missions inside and outside the United States.

Placed reasonably along the variable scale, the role of JTF-N could be seen in support of the Border Patrol in interdicting and arresting criminal elements. Moreover, it might provide support in intercepting and/or deterring the flow of terrorists over the nation’s borders. While very deliberately not involved in arrest and apprehension, the task force can support CBP as the primary law enforcement agency charged with that responsibility. If statutes and regulations were amended to allow JTF-N to join in those more direct functions, however, it is hardly configured to do so. Possessing approximately 150 soldiers, the unit’s main contribution is in intelligence and information sharing, and in facilitating the introduction of other military forces to accomplish specified ends.

Perhaps curiously, JTF-N may be the only standing force from the military’s active component dedicated to an aspect of border security. Its ties to the mission are indirect, born out of a concern over the illicit flow of drugs across our borders. Nevertheless, but the new transition from counterdrug concerns to the newer concerns surrounding counterterrorism will no doubt assure the task force’s continued association with the CBP and its partner agencies.

In the meantime, there are other units whose missions could be applied to these endeavors, especially as focus shifts from border control to border safety to border security. The United States Northern Command itself may serve a vital liaison function between the militaries of the United States, Canada, and Mexico, ensuring transparency and encouraging cooperation through bilateral and multilateral Theater Security Cooperation Plans (TSCPs). NORTHCOM’s Standing Joint Force Headquarters-North (SJFHQ-N) is poised as a deployable command and control element about which a Joint Task Force could be quickly configured in response to any number of homeland defense scenarios.\textsuperscript{63} Predesignated Quick Response Forces in both the United States Army and the United States Marine Corps could quickly fall in as the key components of those JTFs, if deployed. But they are not, nor are they envisioned to be dedicated forces for border missions.

The National Guard.

Then again . . . neither is the National Guard. The Administration frames the current support mission along the southwest border, like the 2002 mission conducted in the wake of 9-11, as an anomaly. However, unless an unexpected turn of events lifts the threat from our borders or a remarkable (some would suggest inadvisable) infusion of manpower takes place in the Border Patrol, it is likely to be a recurring anomaly. Because in spite of understandable reticence surrounding its use, no force recommends itself better to the mission than the Guard.

The thing that most commends the Guard as the military resource of choice in any civil support mission is its traditional relationship with the civil authorities in need of that support. Recruiting
offices across the country remind us of this relationship—an affinity based in the dedication of the Guard to the people it serves, enhanced by its proximity. No one in the military is more attuned to the border enforcement, safety, and security challenges facing Yuma County, Arizona than the Arizona National Guard. No one in the armed forces is more aware of persistent concerns surrounding Aliens of Interest passing through the Swanton sector of New Hampshire, Vermont, and New York than their Guardsmen. Likewise, no element of the United States military enjoys a closer working relationship with the state and local government than those who dwell among them, exercise with them, and plan to respond to emergencies alongside them.

Accordingly, logic continues to dictate that if greater forces are needed along the border, the Guard is the “go to” solution. The same thought process that calls for closer integration between federal, state, and local law enforcement extends easily to incorporating the local “state militia” in support of those integrated efforts. By further extension, as regional state cooperative efforts like the ones discussed here continue, cooperative, collaborative planning between the adjoining states’ National Guard will provide a synergy that could “close the seams” between states’ borders, while simultaneously addressing the larger national border issue.

While the greatest urgency surrounding border security may exist in the states that constitute those borders, the cost for providing that security is not theirs to bear alone. There are a number of precedents that have been set since 9-11 that allow for greater federal support to those states’ immediate concerns. Notable among these are measures designed to fund deployment and employment of the National Guard in missions that remain under state control. For instance, Title 32 of the United States Code authorizes the Secretary of Defense to provide funds for National Guard missions that remain under the authority of a state’s governor, as “necessary and appropriate” in supporting “homeland defense” activities. Similarly, the potential exists for states’ governors to fund National Guard activities undertaken in state active duty status through Department of Homeland Security grant monies. Additionally, federal funding available to the states via 32 U.S.C. §112 for “drug interdiction and counterdrug activities” could logically be extended to a state force whose mission is tied to the federal effort to interdict these illicit activities coincident with the general policing of our nation’s borders.

Funding issues, however, become secondary when viewed against the greater concern of how the National Guard could afford the additional manpower demands implied in a recurring border security mission. A partial solution to this “more immediate challenge” to the border states is to continue to augment their efforts with National Guard units from other states. Doing so would continue the pattern begun in 2002, revisited in Operation WINTER FREEZE, and currently being exhibited in Operation JUMP START. Officials are quick to point out that military readiness has not and will not be degraded by the Guard’s participation in this endeavor. Rather, the Guard’s support has been portrayed as enhancing the engaged units’ readiness in engineering, logistics, transportation, aviation, medical and maintenance. Given continued federal funding and accompanying cooperation among the states through the Emergency Management Assistance Compact (EMAC), these are means that could be applied to the problem for some time.

One should understand, however, that this is only a partial solution, and one that may not be sustainable. Indeed, rising demands on existing numbers in the Guard may make sustainability the ultimate “deal breaker” in these discussions. The current strain being felt by the National Guard due to its employment at home and abroad is well documented. Expecting it to accept an increased burden by way of operations along the border amounts to what has been called “a further strain on already overextended military resources.” What most people fail to realize is that the National Guard has taken on these unprecedented demands, escalating from deployments in Bosnia-Herzegovina and Kosovo in the late 1990s through Operations IRAQI FREEDOM and
ENDURING FREEDOM, with historically weakened manpower. Following the fall of the Soviet Union, the Guard was charged with making force reductions that have never been recovered. In 1989, the end strength of the National Guard stood at 570,000 personnel. Buoyed by the prospect of a “peace dividend,” that force was reduced by 20 percent to approximately 456,000, of which 350,000 are Army Guard. Balance reduced numbers against the increased operational tempo of the National Guardsmen in the last 3 decades, and the picture becomes bleaker still. In the 1980s, serving Guardsmen accounted for approximately 1 million man-days of duty per year. In the 1990s, (with a shrinking force), that figure had grown to 12.5 million man-days. In 2003, statistics showed that these figures had ballooned to 63 million man-days per year.

It is beyond the intent of this chapter to suggest how many personnel are required to effectively secure the borders of the United States. In 2005, the late Representative Charlie Norwood (R-GA) sponsored a study that suggested 36,000 National Guardsmen and/or authorized “State Defense Forces” would be required to assist the Border Patrol in securing the southwest border of the United States. At one point before the activation of Operation JUMP START, the Administration planned to deploy 10-12,000 troops in support of the border patrol, as opposed to the 6,000 that were eventually sent. Whatever the case, the numbers and the need that inspire them are more than appreciable. Combine our concerns to the southwest with the realization that our border with Canada is twice its size—and that there are only 1/10 the number of border patrol agents as exist in the southwest there to “protect” it—and the immensity of the requirement at hand becomes more appreciable still.

Until now we have only examined numbers, without coming to grips with how those numbers should be applied. It should be obvious that the 36,000-man augmentation envisioned in Congressman Norwood’s study were not intended merely for surveillance, intelligence analysis, or engineering functions. They were intended to be postured as the deterrent effect that can only be supplied by boots-on-the-ground, standing in the gap, able to interdict and, as necessary, arrest and apprehend the threat to our people. They were intended to augment law enforcement agents alongside of those agents, occasionally providing peripheral support to their mission, but equally prepared to provide direct support to policing requirements. Were the threats the country is facing still limited to those unintentionally accompanying the “huddled masses yearning to breath free,” the necessity for this augmentation would be significantly different. But, that is not the case, and the nation is obliged to prepare for a greater menace.

We are faced in the center and upper levels of our variable scale with a requirement that fails to fit comfortably in the realm of either law enforcement or national defense. Given the adversaries we have encountered in what has been called the “seam of ambiguity” between the two, the best path is for us to prepare to meet the trials of both environments. With all deference to the Department of Homeland Security and especially to their Border Patrol agents, it is illogical to expect them to be prepared for an upper end threat that may see them outgunned. Neither is it logical to expect the American public to duplicate the assets and capabilities contained in the military to perform a function it should be capable of fulfilling. The reticence of the armed forces to take on the more direct involvement envisioned here is understandable—but perhaps wrongheaded. Beyond the question of technology and manpower, of capabilities and numbers, the military requires a new mindset in addressing the border security issue.

The spirit embedded in the Posse Comitatus Act and the laws and regulations that reflect it are focused on reiterating the role of the military of the United States as the servant of its people. But the preponderance of the concern along our borders does not have to do with the comings and goings of the American people. Our concern is over the illegal entry into our country by those who may wish to do us harm. The nation’s primary defensive focus, as always, remains outward against an
external threat—but that focus must now begin on its shorelines and along its territorial boundaries. The studied hesitancy of the leadership of the Department of Defense should be viewed against how quickly border enforcement issues could become border safety issues, and finally reactive issues of national defense. An organization that justifiably prides itself on a preemptive mentality should bear no umbrage against employing itself as an obstacle to the threats envisioned here.

There is no doubt that this suggested change in the military’s paradigm will require a reexamination of statutes, regulations, and directives. But 9-11 has forced many such reexaminations. Moreover, the redirection envisioned here need not automatically alter the traditional relationship between America and its military surrounding matters of domestic law enforcement. It will, however, automatically and exponentially emphasize a message of deterrence along our borders, and bolster the means of defending that border should that deterrence fail.

Conclusion.

Border security is not what it used to be. Over the last 3 decades, America’s concerns have steadily escalated from what was once as much a humanitarian issue as a security issue, to concerns over paramilitary violence, organized crime, and international terrorism. The requirements to meet these concerns have likewise increased to the point that anything less than an interagency and intergovernmental response will inevitably leave our citizenry vulnerable to a new and expanding series of threats.

One would like to think that the new era of threats to our borders and our people is a temporary condition, and that some day soon the nation will be allowed to settle back to a less demanding posture of readiness. Unfortunately, reality does not accommodate those wishes. The “Long War” our leadership forecasts for our nation and our allies cannot be expected to remain “over there.” Mr. Craig Duehring, Principal Deputy Assistant Secretary of Defense for Reserve Affairs, framed the current state of affairs succinctly and with candor:

The nature of the mission has changed because of the Global War on Terrorism. The potential danger to our country has increased dramatically. It’s not just a story of people looking for a better way of life. It is, in fact, a great potential for increased damage to our country, threats to our citizens, to our way of life. That’s something that needs to be addressed. We took the border mission for granted for too many years, and that’s no longer going to be the case.73

The new threat portends a new challenge for the military, both active and reserve components. From the United States Northern Command, through to the individual state’s National Guard, our leadership will be required to revisit its thinking, motivation, and ethos in addressing this particular “law enforcement” requirement. It will require our government to decide which entities from the depth and breadth of its capabilities are best postured, best equipped, and best trained to meet the trials that lay ahead. Once those means are selected, however, it will require an accompanying commitment from our government to ensure that they are sustainable, in terms of equipment, in terms of technology, and — most importantly — in terms of manpower.

ENDNOTES - CHAPTER 19

5. Ibid, “Message from the Commissioner.”

7. “Special interest countries” are those designated by the intelligence community as countries that could export individuals that could bring harm to our country in the way of terrorism.

15. Aguilar, p. 3.

18. The Act actually only prohibits the Army and, by extension, the Air Force that grew from it. It has been subsequently applied to the Navy and Marine Corps by policy and legislative supplement. There have been, nevertheless, both legislative and executive measures which have provided for rare exceptions in the military’s direct support to law enforcement entities. For a complete discussion of the Act and its implications, see the Congressional Research Service Report 95-964, The Posse Comitatus Act & Related Matters: the Use of Military to Execute Civilian Law by Charles Doyle.

20. The first Quartering Act, May 1765, provided that Great Britain could house its soldiers “in inns, livery stables, ale houses, victualling houses, and the houses of sellers of wine and houses of persons selling rum, brandy, strong water, cider or metheglin,” and, if numbers required, in “uninhabited houses, outhouses, barns, or other buildings.” It further required any inhabitants, or in their absence, public officials, to provide food and alcohol for the soldiers “without paying any thing for the same.” A second Quartering Act, June 1774, was designed to restore imperial control over the American colonies. This became part of what the colonists would refer to as the Intolerable Acts, See David Ackerman’s “The Tea Crisis and its Consequences through 1775,” in Jack P. Greene and J. R. Pole, eds., The Blackwell Encyclopedia of the American Revolution, Malden, MA: Blackwell, 1999.

21. See, for instance, DoDD 5143.01, Under Secretary of Defense for Intelligence; DoDD 5148.11, Assistant to the Secretary of Defense for Intelligence Oversight; and DoDD 5240.01, Department of Defense Intelligence Activities. The department’s attitude is clearly displayed in the latter, leading its Policy section with the declaration:

All DoD intelligence and CI activities shall be carried out pursuant to the authorities and restrictions of the U.S. Constitution, applicable law, Reference, c, [Executive Order 12333, United States Intelligence Activities, and Executive Order 13355, Strengthened Management of the Intelligence Community]. the policies and procedures authorized herein, and other relevant DoD policies authorized by Reference, bj[DoDD 5143.01, Under Secretary of Defense for Intelligence]. Special emphasis shall be given to the protection of the constitutional rights and privacy of U.S. persons.(emphasis added)

27. For further information surrounding these recommendations, see the Report of Chairman Lamar Smith to the Subcommittee on Immigration and Claims of the Committee on the Judiciary of the House of Representatives, titled Oversight Investigation of the Death of Esequiel Hernandez, Jr.,” November 1998.

43. Ibid, p. 4.

44. Ibid, p. 13.

51. Fact sheets on Operation JUMP START from both Custom and Border Protection and the National Guard list numbers of “Alien rescues” among their significant accomplishments.

55. Operation WINTER FREEZE was a designated National Special Security Event (NSSE) conducted by DoD in support of Border Patrol operations in its Swanton sector, encompassing 295 miles of continuous border between Canada and New York, New Hampshire, and Vermont. The sector had become notorious as the area with the largest
number of Special Interest Aliens intercepted in the entire country. Conducted from October 30, 2004 to January 26, 2005, the operation was initiated in partial response to the terrorist attacks in Barcelona, Spain, prior to their national elections, and current intelligence data that highlighted the timeline between the Presidential election of 2004 and Inauguration Day 2005 as a period of vital concern. Both active duty and reserve component assets were utilized in support of the event, but by far the greater percentage of support came from the National Guard (93% of the Task Force was Guard, hailing from 21 different states).

57. In addition, and unlike the National Guard, Weapons of Mass Destruction Civil Support Teams (WMD-CST, CBIRF) can also deploy overseas in support of the Unified Commands.

67. Testimony of Lieutenant General H. Steven Blum, Chief, National Guard Bureau, before the U.S. House of Representatives Armed Services Committee, National Guard and Border Security, May 24, 2006, p. 3.

MARTIN L. COOK (Ph.D., University of Chicago, 1985) is Professor of Philosophy at the United States Air Force Academy. He previously taught at the U.S. Army War College, Santa Clara University, the College of William and Mary, and numerous other educational institutions. Among other works, he is author of The Moral Warrior: Ethics and Service in the U.S. Military, New York: SUNY Press, 2004.

COLONEL JAMES A. HELIS (Ph.D., Tufts University, 2006) is the Chairman of the Department of National Security and Strategy at the U.S. Army War College and former Director of Military History and Strategy in the same department. He is an infantry officer and has served in command and staff positions to include the Department of Peacekeeping Operations at the United Nations Headquarters in New York.

FRANK L. JONES (MPA, State University of New York at Albany, 1978) is Assistant Professor of Security Studies at the U.S. Army War College. A retired member of the Senior Executive Service with more 30 years of government service, he served in several positions within the Office of the Secretary of Defense including Deputy Assistant Secretary of Defense for Special Operations Policy and Support, and as Principal Director for Strategy, Plans and Resources in the Office of the Assistant Secretary of Defense for Homeland Defense. From 2006-2007, he was a fellow at the Homeland Security Institute, the Department of Homeland Security’s federally funded research and development center, where he worked on national response planning and maritime security issues. He has written several book chapters and journal articles on such subjects as national security policymaking, homeland defense, and terrorism.

PAUL REXTON KAN (Ph.D., University of Denver, 2000) is an Associate Professor of National Security Studies at the U.S. Army War College. He is the former Deputy Director of the Center for China-United States Cooperation where he coordinated professional exchanges with the policy institutions linked to the Ministry of Foreign Affairs, the Ministry of State Security, and the People’s Liberation Army. He has published articles on the links between irregular warfare and criminality in Small Wars and Insurgencies, International Journal of Intelligence and Counterintelligence, Air and Space Power Review, and Defense Intelligence Journal. He was recently awarded the U.S. Army War College’s General George C. Marshall Faculty Research Grant to complete his forthcoming book, Drugs and Contemporary Warfare (Washington, DC: Potomac Press).
JANEEN M. KLINGER (Ph.D., University of California, Berkeley, 1990) is Professor of Political Science with the Department of National Security and Strategy, U.S. Army War College. She taught previously at the Command and Staff College of Marine Corps University and at Franklin and Marshall College. She also worked as an analyst for the Central Intelligence Agency, specializing in issues related to international political economy.

WALTER H. “HARRY” LEACH (M.S., Johns Hopkins University, 1991) is the Director of Aerospace Studies in the Department of National Security and Strategy and the Director of the U.S. Army War College National Security Seminar. He is a colonel in the U.S. Air Force and a helicopter pilot. He commanded an airlift squadron and also served in staff assignments in force structure planning, arms control, and the Air Force Tactical Exploitation of National Capabilities (TENCAP) program. In addition to his current instructor role, Colonel Leach taught undergraduate mathematics. He is a 1982 graduate of the Air Force Academy and is also a graduate of the College of Naval Command and Staff and the U.S. Army War College.

GABRIEL MARCELLA (Ph.D., University of Notre Dame, 1973) is Professor of Third World Studies and has served as Director of the Americas Studies in the Department of National Security and Strategy of the U.S. Army War College. His government experience includes service as International Affairs Advisor at the United States Southern Command. He has written extensively on Latin American security issues and U.S. policy, as well as the interagency process and national security. He is a consultant to the Departments of Defense and State. His current research focuses on the Colombian conflict and U.S. strategy.

THOMAS W. MCSHANE (J.D., Pepperdine University, 1977) was Director, National Security Legal Studies in the Department of National Security and Strategy at the U.S. Army War College. He retired as a colonel from the Army in January 2006. His Judge Advocate General experience includes service with the 101st Airborne Division in the Gulf War and as Staff Judge Advocate for the Southern European Task Force during NATO’s Kosovo campaign. He taught criminal law and procedure at the Army’s Judge Advocate General’s Legal Center and School, has written articles for Parameters and The Army Lawyer, and addressed military and civilian audiences in the U.S. and overseas.

RICHARD M. MEINHART (Ed.D., George Washington University, 2004) is currently serving as a Professor of Defense and Joint Processes at the U.S. Army War College in the Department of Command, Leadership and Management. He is a retired Air Force colonel who has served on the Air Force Staff, Army General Staff and Joint Chiefs of Staff, as well as at three different overseas locations. His research and writing interests are in the areas of strategic leadership and management.

R. CRAIG NATION (Ph.D., Duke University, 1976) has served as Professor of Strategy and Director of Russian and Eurasian Studies with the Department of National Security and Strategy, U.S. Army War College, since 1996. His most recent major publication, a history of the Balkan conflict of the 1990s, is entitled War in the Balkans, 1991-2002.

DAVID L. PERRY (Ph.D., University of Chicago Divinity School, 1993) is Professor of Ethics in the Department of Command, Leadership and Management, and holds the General Maxwell Taylor Chair of the Profession of Arms. He teaches courses on ethics and warfare, strategic leadership, and U.S. defense policies, planning, organizations, and processes. He also is the primary author.
for core-course lessons on ethical reasoning and professional military ethics. His 40+ publications include articles on ethics in war, espionage, interrogation, and covert action. Prior to joining the U.S. Army War College faculty, he taught medical ethics and business ethics for 10 years at Seattle University and Santa Clara University.

ALAN G. STOLBERG (Ph.D., Temple University, 2007) is Assistant Professor of National Security Studies, Director of the National Security Policy Program, and holds the Henry L. Stimson Chair of Military Studies at the U.S. Army War College. A retired Army colonel, he served in a variety of intelligence and policy and strategy positions as a European and Eurasian Foreign Area Officer, to include Soviet/East European Political Military Planner for the Joint Staff J5 during the time of the fall of the Berlin Wall, American liaison officer to UNPROFOR during the siege of Sarajevo in 1995, and Chief of the Europe/NATO Division in USEUCOM J5 during the Kosovo conflict and the first year of the Global War on Terror. He was also the Division G2 and a battalion commander in the 3rd Infantry Division. Current research focuses on policy and strategy making, European and Eurasian security, security cooperation, and the U.S. Government interagency.

JOHN F. TROXELL (MPA, Princeton University, 1982), is an Associate Professor in the Center for Strategic Leadership at the U.S. Army War College, and holds the General George S. Patton Chair of Operational Research and Analysis. Prior to assuming his current position, he was the Director of National Security Studies in the Department of National Security and Strategy at the U.S. Army War College. He has also been a faculty member of the Department of Social Studies at the United States Military Academy. He is a retired Army colonel and has served in a variety of operational and staff assignments to include the Department of the Army War Plans Division and as a force planner for the Assistant Secretary of Defense for Strategy and Requirements. He has published articles and monographs with the Strategic Studies Institute, Parameters, and Military Review.

BERT B. TUSSING (MNSSS, U.S. Naval War College; MSS, U.S. Army War College) is the Director of Homeland Defense and Security Issues in the U.S. Army War College’s Center for Strategic Leadership. He joined the U.S. War College faculty in 1999 after 24 years in the United States Marine Corps where he served in operational assignments in Grenada, Beirut, Somalia, and Bosnia-Herzegovina. He is a senior fellow of George Washington University’s Homeland Security Policy Institute; a member of the Board of Experts for UC-Irvine’s Center for Unconventional Security Affairs; a member of the Commonwealth of Pennsylvania’s Homeland Security and Emergency Preparedness Advisory Council; on the steering committee of the Homeland Security/Defense Education Consortium Association; and a senior fellow of Long Island University’s Homeland Security Management Institute.

MARYBETH P. ULRICH (Ph.D., University of Illinois, Champaign-Urbana, 1996) is Professor of Government in the Department of National Security and Strategy at the U.S. Army War College. She has also taught at the U.S. Air Force Academy and at the Naval Postgraduate School. An experienced navigator on KC-135Q refueling planes, she served 15 years in the active USAF and is a lieutenant colonel in the Air Force Reserve. She has written extensively in the field of strategic studies with special emphasis on civil-military relations, national security democratization issues, and European security. Among her numerous publications is a book, Democratizing Communist Militaries: The Cases of the Czech and Russian Armed Forces, 1999.
ANTHONY WILLIAMS (MA, University of Virginia; Ph.D. Candidate, University of Virginia) retired with over 30 years experience as an intelligence officer with the Central Intelligence Agency, during which time he held various senior positions with the agency, the U.S. Intelligence Community and in other departments of the U.S. Government. Before retiring, he served as the Representative of the Director of Central Intelligence to the U.S. Army War College, and held the Walter B. Smith Chair of National Intelligence Studies in the Department of National Security and Strategy. He is a Ph.D. candidate in Russian and European History at the University of Virginia.
APPENDIX II

GUIDELINES FOR STRATEGY FORMULATION

Strategy is an art. It is also somewhat scientific, in that it follows certain patterns which require a common understanding of terminology, adherence to certain principles, and disciplined, albeit creative, thought processes. Remember that these strategy formulation guidelines are not formulas. Strategy will be developed in keeping with the particular features of the time, place, and personalities involved. Nevertheless, these guidelines offer an approach to address the complexity of strategy, and are intended for strategists attempting to achieve the coherence, continuity, and consensus that policymakers seek in designing, developing, and executing national security and military strategies.

Figure 1.
NATIONAL PURPOSE

This is the starting point for the entire process. Enduring values and beliefs embodied in the national purpose represent the legal, philosophical, and moral basis for continuation of the American system. From the nation’s purpose—as well as an understanding of the nation’s domestic and global needs—the United States derives its enduring core national interests. The strategist should return to these considerations in terms of risk assessment at every derivative level of strategy formulation.

CORE NATIONAL INTERESTS/ENDS

There are four generally agreed upon core U.S. national interests: physical security—defined as the protection against attack on the territory and people of the United States in order to ensure survival with fundamental values and institutions intact; promotion of values; stable international order and economic prosperity. These core interests are translated into three grand strategic objectives: preserve American security, bolster American economic prosperity, and promote American values. All administrations focus on these objectives, but depending upon the assessments of threats and opportunities, as well as other variables such as personal beliefs and unique circumstances, Presidents establish different strategic visions of America’s role in the world, often causing them to choose to emphasize one objective over the others. For the Carter administration, the initial emphasis was on human rights; for the Reagan administration, it was security; and for the Clinton administration, it was the economy. Security is once again the top priority, but in an increasingly globalized world populated by nonstate actors with possible access to weapons of mass destruction, achieving physical security paradoxically may require an equal emphasis on promoting democratic values and generating global economic prosperity.

GRAND STRATEGY/STRATEGIC VISION

At the grand strategic level, the ways and means to achieve U.S. core national interests are based on the national leadership’s strategic vision of America’s role in the world.

Throughout America’s history, this vision has ranged from isolationism to global engagement, containment of communism to American primacy. In order to be effective, each new administration has had to express a vision for the U.S. role in the world that doesn’t outrun the experience of the American people, and thus lose the decisive authority or domestic consensus to implement the strategic vision. Is the vision, in other words, suitable and acceptable?

President Franklin D. Roosevelt, for example, had to act carefully prior to World War II as he moved the American grand strategic vision from isolationism to one of global engagement. And within 5 years after the end of that war, the perception of external threat allowed President Harry S Truman to gain support for the grand strategic vision of containment—focused on containing the Soviet Union on the Eurasian landmass.

Grand strategic means involve careful consideration of America’s national elements of power at the broadest level. Given the state of the international and domestic environments and the scope of the administration’s strategic vision of the U.S. role in the world, a key consideration is the feasibility of employing sufficient U.S. national power to achieve core objectives.
NATIONAL POLICY

Based on grand strategic decisions, U.S. political leadership provides national policy in the form of broad guidance concerning America’s global role in pursuit of core national objectives. This policy is the start point for strategy formulation at the national level. National policy is conveyed in many iterative and cumulative forms ranging from formal national security directives and pronouncements in presidential and cabinet-level speeches to presidential replies to press queries and cabinet-level appearances on current affairs television shows.

STRATEGY FORMULATION PROCESS

General.

Inherent in this more detailed strategy process is an appropriate degree of analysis designed to illuminate alternatives in the face of recognized uncertainties. A general outline for this phase of the strategy process follows:

(a) Identify U.S. interests.
(b) Determine level of intensity for each interest.
(c) Evaluate the issues, trends, and challenges (threats and opportunities) in regard to interests.
(d) Determine objectives (ends).
(e) Consider alternative concepts (ways) that utilize available or needed resources (means) to achieve objectives.
(f) Determine the feasibility, acceptability, and suitability of the strategic options.
(g) Conduct a risk assessment.
(h) Present policy recommendations.

The analysis must be more than a listing of challenges. To be useful, it must examine and explain which and in what ways U.S. interests are affected. The analysis should seek to identify opportunities and threats to U.S. interests. As a consequence, the strategic analysis will not only be influenced by current national policy, but will help identify recommendations to change existing policies or create new ones. The analysis should address most—if not all—of the following questions:

(a) What is the current U.S. policy or precedent?
(b) Who are the other critical actors?
(c) What are their interests and/or policies?
(d) With whom does the U.S. have convergence or divergence of interest/policy?
(e) What are the other feasible options to employ the U.S. elements of power to implement the policy options under consideration?
(f) How will the policy be sustained?

The strategy formulation guidelines delineated above can apply equally to all formal national security documents (i.e., National Security Strategy, National Defense Strategy, National Military Strategy, theater military strategy, etc.). The strategist must be able to develop strategies employing all of the elements of power. Students at the U.S. Army War College (USAWC) will develop and practice these skills in NSPS, elective courses, and the Strategic Decisionmaking Exercise. Remember, the formulation of strategy at any level employs the strategic thought process based on the balancing of Ends, Ways, and Means.
National Interests.

During the strategy formulation process, the strategist moves beyond the core grand strategic interests to more specific national security interests derived from those core interests in accordance with national policy. These national security interests provide more detail to the nation’s needs and aspirations, in terms of the relationship between the foreign and domestic aspects of national security, and are thus the start point for defining strategic objectives for national security related strategies.

As a rule of thumb, interests are stated as fundamental concerns of the nation, and written as desirable conditions without verbs, action modifiers, or intended actions. For example, U.S. national interests might be stated as:

(a) Access to raw materials – (not “Protect sources of raw materials”).
(b) Unrestricted passage through international waters— (not “Secure sea lines of communications”).

The USAWC groups national interests into three categories derived from the four core interests of the United States. Categories help to organize interests. Keep in mind the breakdown is normally artificial. Thus, while “Unrestricted access to Persian Gulf Oil” as a U.S. national interest has a primary category of “Economic Well-Being” for the U.S. and its allies, it also ties into the other two categories of national interests used by the USAWC. The three categories are:

(a) Security of the Homeland: protection against attack on the territory and people of a nation-state in order to ensure survival with fundamental values and political systems intact.
(b) Economic Well-Being: attainment of the conditions in the world environment that ensure the economic well-being of the nation.
(c) Promotion of Values: establishment of the legitimacy of or expansion of the fundamental values of the nation such as democracy and human rights.

Determining the level of intensity helps to determine priority of interests, recognizing that without prioritization, there is the potential for unlimited derivative objectives and the consequent mismatch of those objectives (ends) with resources (means), which are always finite. The degree of intensity of an interest, in particular, should be determined before a detailed analysis of threats to those interests. It is important that interests not become a function of a particular threat. If a government begins with a threat assessment before a conceptualization of interest intensity, it may react to a threat with major commitments and resources devoid of any rational linkage to that intensity. Rational cost-benefit analysis should not be allowed to affect the intensity of interest. The three USAWC degrees of intensity are determined by answering the question: What happens if the interest is not realized?

(a) Vital: if unfulfilled, will have immediate consequences for core national interests.
(b) Important: if unfulfilled, will result in damage that will eventually affect core national interests.
(c) Peripheral: if unfulfilled, will result in damage that is unlikely to affect core national interests.
Ends-Ways-Means.

Strategic objectives are derived from national policy and from a detailed consideration of U.S. national interests by category and intensity against the backdrop of issues, trends, and challenges (threats and opportunities) that affect those interests. Based on these objectives, strategists then consider alternative concepts and courses of action for the use of the national elements of power. Note the primacy of the objectives—strategy should be ends-driven, not resource-driven, in order to ensure maximum opportunity to achieve the objectives.

Defining the objective (end), therefore, is a critical first step in the strategy formulation process. If the objective is too vague or poorly understood, no amount of resources or careful consideration of ways to employ those resources will ensure success. On the other hand, defining an objective too narrowly may restrict the ways and/or means available. Finally, understanding of the objective is critical to determining success or failure of any particular strategy.

Once the desired end is identified, strategists consider the range of resources (means) available, then examine potential ways to employ these resources in pursuit of the objectives. While strategy should remain ends-focused, ways are necessarily resource-constrained. Unless a state has nuclear weapons, the concept of nuclear deterrence cannot be adopted in developing its security strategy (there is no “mutually assured destruction”). Therefore, the state must find alternative ways to enhance security or deter attack by a nuclear-capable adversary. Potential alternatives include establishing alliances with nuclear capable countries (i.e., NATO), or securing security assurances in exchange for not pursuing attainment of (or eliminating existing) nuclear weapons (i.e., Cuba). If, however, deterrence is perceived to be the only viable option, the state must either work to attain nuclear weapons (i.e., North Korea) or to develop alternative forms of deterrence (chemical or biological weapons, perhaps?).

Feasibility, Suitability, and Acceptability.

Once potential strategy options are identified, each option must be examined to determine its feasibility (Do we have the means to execute the ways?), acceptability (Does it have domestic and Congressional support? Is it legal? Ethical? Worth the cost?), and suitability (Will it achieve the desired ends?). This evaluation process enables to strategist to evaluate the likelihood of success for each option and to select that strategy deemed most likely to attain the desired ends with available means and in an acceptable way. Before a final strategy is recommended or adopted, however, each option must also be subjected to a risk assessment.

Risk Assessment.

Strategies at any level normally lack resources or the ability to employ resources in a manner sufficient for complete assurance of success. As a result, a final and essential test is to assess the risk of less than full attainment of strategic objectives, as well as the risk of second and third order effects that implementation of the strategy could have (i.e., effects on the economy, relationships with allies, etc.). Living with risk is part of the strategist’s business in the modern world, and being able to articulate its character and extent is the first step in reducing its impact. Where the risk is determined to be unacceptable, the strategy must be revised by either reducing the objectives, changing the concepts, increasing the resources, or some combination of these actions. In the deterrence example described previously, the state’s decision about whether to pursue attainment of nuclear weapons rather than entering into an alliance or accepting a security assurance pledge
will depend, in part, on the extent to which it is willing to accept the risk associated with each option. If the risk associated with relying on the good faith of its allies and/or potential adversary is unacceptable, then the state will likely try to attain nuclear weapons. On the other hand, if the risks associated with attempting to acquire nuclear weapons (i.e., economic sanctions that might cripple the economy) are too great, the state may have little choice but to pursue other options.
