This Shoe No Longer Fits: Changing the US Commitment to the MFO

THOMAS W. SPOEHR

From *Parameters*, Autumn 2000, pp. 109-25.

On 17 March 1982, under fair skies and warm weather, Lieutenant Colonel William Garrison, in command of 670 officers and men of the 1st Battalion, 505th Airborne Infantry Regiment, landed at a remote airfield in the southern part of the Sinai Peninsula. Amidst media and senior dignitaries, Colonel Garrison and his battalion arrived to take their place as the historic first echelon of a US contribution to the newly constituted Multinational Force and Observers (MFO).[1] Born in the 1979 Camp David Accord negotiations, the MFO was tasked to supervise treaty security protocols between Israel and Egypt. Little could Colonel Garrison have known that his battalion would be merely first in a line of over 39 rotations of US infantry battalions committed to the MFO mission, spanning a period of more than 17 years.

Today, the MFO is an independent, international organization principally funded from its inception in equal shares by the governments of Egypt, Israel, and the United States. Through the military contributions of the United States and ten other countries, it stands as an example of a highly successful peacekeeping organization. That success has helped to alter the Mideast environment, which is stunningly different today from the way it was in 1979. And yet the MFO has changed very little over the years--as the familiar saying goes, "If the shoe fits, wear it." In the case of the MFO, however, the current US commitment no longer fits; it should be modified based on the contemporary situation. Based on world and regional developments, changes are appropriate for the MFO which can herald a more mature Egyptian-Israeli relationship, relieve contributing nations of resource burdens, and free US forces for other, more pressing, obligations. A critical review of the MFO is particularly relevant today as the United States contemplates whether to provide peacekeepers to help secure another Arab-Israeli treaty, in this case between Syria and Israel.

Background

In the last 50 years, the desert of the Sinai Peninsula has been the scene of much conflict and subsequent peacekeeping activity. In the convulsions following the creation of the state of Israel, the United Nations authorized its first peacekeeping mission, the UN Truce Supervisory Organization (UNTSO), to supervise the peace between Israel and its Arab neighbors in 1948. Surprisingly, this mission still exists today, continuing to operate an outpost with four officers in the Sinai.[2] Following Israel's withdrawal from the Sinai after its successful 1956 invasion, the United Nations placed the UN Emergency Force (UNEF I) in the Sinai as a peacekeeping force in early 1957. Just before the 1967 war, UNEF I was withdrawn at the request of Egyptian President Nasser.[3] The removal of this force contributed to an Israeli mistrust of the UN peacekeeping system. During the 1967 Six Day War, Israel seized the entire Sinai Peninsula and occupied it until the 1973 Yom Kippur War. Following the cease-fire in 1973 and Disengagement Agreements in 1974, the UN deployed another peacekeeping mission, UNEF II, in 1974. UNEF II grew to over 7,000 military personnel. In 1976, in response to Israeli insistence, the United States also organized and deployed a small group of US civilian observers, called the Sinai Field Mission (SFM), to assist in truce observation and monitoring of sensors at the Giddi and Mitla passes. The cease-fires and agreements that UNEF I, UNEF II, and the SFM supervised were no more than military truces, however, and never reflected a lasting peace.[4]

The Treaty of Peace signed on 26 March 1979 by Prime Minister Menachem Begin, President Anwar Sadat, and witnessed by President Jimmy Carter marked a fundamental change in the Middle East geopolitical environment. It also represented a monumental risk for all concerned--Egypt for parting with the Arab bloc, and Israel for relinquishing the Sinai. The treaty was crafted to accommodate both nations' primary concerns: Egypt regained sovereignty over the Sinai, and Israel obtained a guaranteed peace. It remains one of the greatest achievements of an American President in diplomacy. As written, the Peace Treaty called for UN peacekeeping forces to supervise the implementation. The security measures described in the treaty were some of the most thorough and detailed ever

formulated. The Sinai was divided into sectors. Strict limits of military forces were detailed for each zone.[5] The envisioned UN peacekeeping force was to supervise the withdrawal of forces and the subsequent adherence by both nations to the zone troop limits and to other restrictions.

Anticipating that the US-brokered peace treaty might encounter problems garnering support in the UN Security Council, Israel insisted on a provision that the United States would take the lead in establishing an alternative peacekeeping organization if required. As the date for the treaty signing drew near, pressure to decide whether the United States would provide such a guarantee grew intense. In the end, the agreement that the United States would take the lead in organizing a non-UN force, if the need arose, was not finalized until the day the actual treaty was signed. This promise was transmitted in identical letters that President Carter sent to both Begin and Sadat.[6]

Israel's suspicion that the United Nations would not favorably consider a request for a UN Sinai peacekeeping mission proved accurate. In what can be considered a "casualty of the Cold War," the UN Security Council notified the United States on 18 May 1981 that it was unable to reach consensus on organizing a UN peacekeeping force to undertake the missions of the peace treaty.[7] This failure has been attributed to the strong positions taken by "embittered Arab states, the jilted Soviet bloc, and pro-Arab states of the Non-Aligned Movement." [8] Additionally, UN Secretary General Kurt Waldheim was reportedly not enthusiastic about establishing the precedent of conducting peacekeeping operations when a final peace treaty was already in place.[9]

At the same time, there was a growing need to identify an organization to supervise the security aspects of the treaty. Between July 1979, when UNEF II was dissolved, and May 1981, the SFM had supervised treaty security arrangements. After the UN declined to provide a force and under pressure from the Israelis, who proposed to delay withdrawal until an adequate peacekeeping force could be put in place, the United States was forced to implement its least preferred course of action: the establishment of a new, non-UN-sponsored peacekeeping organization.[10] Representatives from Egypt and Israel (referred to as the "Parties" in the treaty) and the United States gathered to devise the rules and operating procedures for what became known as the Multinational Force and Observers (MFO). This effort culminated in the signing of the Protocol to the Treaty of Peace on 3 August 1981. The Protocol translated the terms of the treaty into executable tasks and responsibilities. On that same day, US Secretary of State Alexander Haig sent a letter to both governments promising that the United States would contribute an infantry battalion, a logistics unit, and civilian observers to the MFO.[11] Significantly, the Protocol specified that changes to the MFO would be made only by "mutual agreement of the Parties." [12] Perhaps concerned about the ephemeral nature of previous UN missions, Israel resisted efforts to include a mechanism within the Protocol to consider periodic changes to the MFO.[13]

Although preparation time was limited, through a concerted effort on the part of the Parties and the United States, as well as the contributing nations, the MFO was prepared to assume its mission on 25 April 1982 as required. Nations were identified to provide military forces, units were trained, and construction of necessary facilities was expedited.[14] For the first time, US troops became the mainstay of a multinational presence under non-UN auspices. Perhaps the United States could take some comfort in the fact that MFO facilities construction was planned based on a requirement to last ten years.[15]

The MFO Today

Unlike recent peace enforcement operations undertaken in countries such as Bosnia, Kosovo, and East Timor, the MFO mission is based on "traditional peacekeeping": the use of military forces, with the consent of previously warring parties, to maintain cease-fires, truces, or other interim agreements. The mission of the MFO is to monitor military activities in the Sinai; to follow up on requests from either Party requesting additional observations; and, using several small patrol craft, to ensure freedom of navigation through the Strait of Tiran.[16] (See Figure 1, below.) In addition to its independence from the UN, what distinguished the MFO from other peacekeeping operations at the time is that it was the only such operation constituted and maintained to supervise a finalized peace treaty.[17]

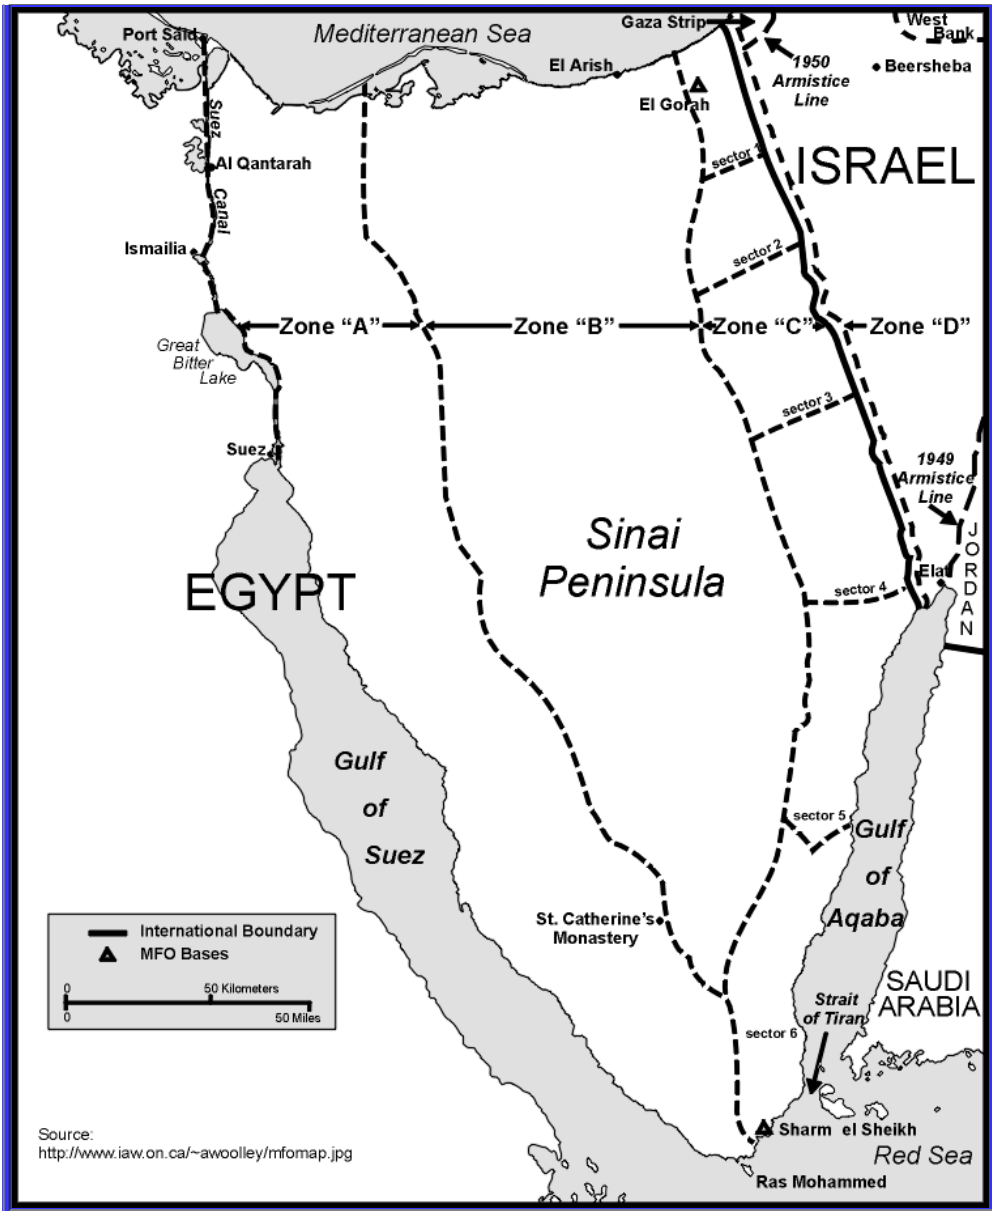

Figure 1. MFO Treaty Zones.

MFO headquarters is located in Rome; its Force and Observers are located on the Sinai Peninsula. The MFO Director General, with his staff, directs all activities of the MFO. The Director General maintains contact with the Parties through liaison officers located in Cairo and Tel Aviv. A general officer, located at El Gorah in the northern Sinai, commands the MFO forces, observers, and support units. Although ten nations are considered official contributing nations, Norway also provides some staff officers, bringing the number of participating nations to eleven. The organization and major units of the MFO are shown in Figure 2, below, with US elements highlighted.[18]

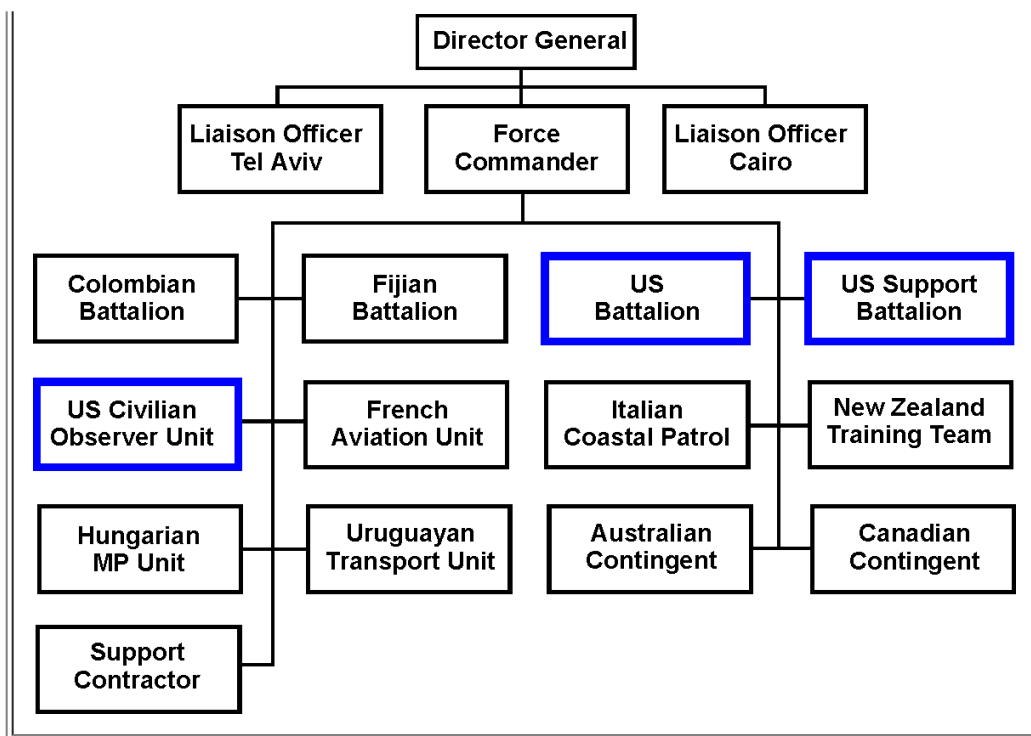

Figure 2. Organization of the MFO.

To operate, the MFO requires three primary types of resources: military equipment, funding, and military manpower. Military equipment needs are modest, and except for periodic replacement are already in place. Examples of equipment that has been provided are coastal patrol boats from Italy and helicopters from the United States. By agreement, funding responsibilities for the MFO were to be shared equally by Egypt, Israel, and the United States. Additional financial contributions are made by Japan, Germany, and Switzerland. Since 1995, the total annual MFO budget has remained approximately \$51 million. The MFO has been able to achieve an approximately 30-percent reduction in expenses since 1988 through the use of cost-cutting, efficiencies, and contract personnel. Similarly, the MFO has reduced military manpower requirements from 2,692 in 1984 to 1,844 today. Of this number, about 880 are from the United States.[19]

The MFO conducts two basic types of operations: observation from predetermined points within Zone C by the three infantry battalions, and mobile observations and inspections by the Civilian Observer Unit conducted throughout Zones A, B, C, and D. (See Figure 1 for the location of the treaty zones.) Zone C, the area of military observation, is approximately 375 kilometers (233 miles) long and 20 kilometers (12.4 miles) wide, and is manned by the Fiji battalion in the north, the Colombian battalion in the center, and the US battalion in the south.[20] During the negotiations concerning treaty security measures, the United States had hoped to rely primarily on observers, but Israel insisted on military forces, presumably seeking added political US commitment.[21] The Civilian Observer Unit (COU), a direct descendent of the Sinai Field Mission, is the long-range asset of the MFO. Accompanied by liaison officers from both Israel and Egypt, COU observers make periodic inspections throughout the zones to ensure that the Parties comply with force limitations and other restrictions. They also follow up on challenges raised by either Party.[22] On these and other operations, the MFO task is greatly facilitated by the geography and demography of the Sinai. Unlike the challenges faced by the UN Interim Force in Lebanon (UNIFIL), for example, there is considerable space with which to separate the former combatants, and the area is generally free of third-party factions seeking to undermine the peace process.[23] Additionally, the MFO was fortunate to have an extremely well-defined mission and a tradition of Sinai peacekeeping on which to build. Indeed, as John Mackinley points out, "No other peace force has been preceded by such a panoply of negotiations and interim forces." [24]

The MFO is internationally recognized as a uniquely successful non-UN peacekeeping organization, and it has been studied by numerous experts to determine whether such success can be replicated elsewhere. These studies have concluded that while competent management has played a part in MFO effectiveness, the overall force behind the continuing peace in the Sinai has been political commitment by the Party nations to fully comply with the treaty terms. Given similar geographic, political, and organizational circumstances, experts have concluded that other peace

organizations such as the United Nations can achieve comparable results.[25]

Today's Geopolitical Environment

Since 1979 the political landscape has radically changed in the Middle East. Almost as the last shot echoed across the 1973 battlefields, Arab nations, led by Egypt, realized that there was no military solution for dealing with Israel.[26] The demise of the Soviet Union further defused the situation by eliminating the possibility for conflict between superpower client states in the region. Since Camp David, nations such as Egypt and Syria have fought alongside the US-led coalition forces to defeat Iraq in a combined operation that would have been inconceivable a decade earlier. Jordan and Israel concluded a peace treaty in 1994, and Syria and Israel have resumed peace negotiations. Coming into office in May 1999 with a campaign pledge to negotiate peace with Syria, Israeli Prime Minister Ehud Barak seems intent on forging a final peace settlement. How the death of Syrian President Hafez Assad will affect the negotiations is not yet apparent. Any significant disagreements currently dividing Egypt and Israel revolve around economic rather than security issues.[27] All in all, the relationship between these nations today is one of "cold peace" which resembles that of two cautious neighboring states, a normal situation in international relations, common throughout the world.

Similarly, US-Israeli relations have progressed significantly since the 1970s. It was only during the period from 1967 to 1977 that successive US administrations began to forge what former US Ambassador to Israel Samuel W. Lewis termed "rudimentary strategic relationships." Despite this change, the United States continued to consider the Arab-Israeli conflict within the larger context of the US-USSR competition. Beginning with the Carter Administration, however, the United States increasingly entered into more robust security commitments. This approach continued with President Reagan, who unequivocally categorized Israel as a "key ally." Today, Israel enjoys unquestioned status in the United States as an official non-NATO ally. To illustrate this point, Lewis writes: "The contrast with the 1970s could not be greater. Despite the unfinished and often contentious business of peacemaking, which dominates the headlines, largely out of the glare of publicity Israel and the United States have consolidated a strategic relationship which is surely an alliance in all but name." [28]

While not as close as those between the United States and Israel, relations between Egypt and the United States are at an unparalleled high point. The two countries are cooperating closely in facilitating Syrian-Israeli and Palestinian-Israeli negotiations. Moreover, US and Egyptian military forces routinely operate together in combined exercises. While in Egypt in September 1999, Secretary of State Madeleine Albright highlighted the "strength of our bilateral relationship, our friendship, and our shared commitment to peace." [29]

Both Israel and Egypt obviously value the close relationships they have carefully built with the United States. While these nations would obviously act in accordance with their vital interests, it is clear that neither would capriciously jeopardize this relationship.

Another consequence of the end of the Cold War has been the increase in peace operations. Between 1948 and 1988, the UN authorized and supported 13 peacekeeping missions. Since 1988, the UN has mounted 36 such missions.[30] This increase has generated some concern among US leaders, particularly within the Department of Defense, in terms of overcommitment of US military forces.[31]

While both Egypt and Israel officially support the continued maintenance of the MFO in its current configuration, there have been indications over the years that Egypt would like to explore alternatives ranging from outright withdrawal of the MFO to replacement of that organization by a UN observer force.[32] Israel reportedly has rejected any such changes, citing security concerns and a belief that the MFO might be called upon to serve in support of a future Syrian-Israeli pact.[33] This unqualified support for the MFO has typified Israel's official position, which has not visibly wavered since 1982. A major factor, of course, is cost-effective security. Today, Israel has only a minor force presence on the Sinai border; before the MFO's inception, Israel maintained two heavy army divisions on that border. Although not technically a "Party" nation, the United States commands considerable influence with both Egypt and Israel, and can bring substantial leverage to bear should it choose.[34]

Within the US government, there is currently a DOD-led movement toward reducing US support to the MFO. In May 1999, then Deputy Secretary of Defense John Hamre publicly indicated that DOD believes changes are appropriate: "We certainly think it [the MFO] can be scaled down. I think we're seeing a fundamental change in the way that Israel

and Egypt relate to each other, and it doesn't require this beefy US presence." [35] Since the Department of State has the lead for the MFO, any changes in the US position must first be approved in the interagency system. In 1999 and 2000, several interagency meetings were held without conclusive results. [36]

Assessing the MFO and US National Interests

US national interests represent the best framework to analyze the value of support to the MFO. US foreign policy must act in direct support of US national interests, and to be effective and relevant this foreign policy must be constantly assessed in light of global developments. It is proper, therefore, to routinely examine the nature of US support to the MFO in order to determine whether that support continues to best serve the national interests.

Three vital US interests are germane in this regard. The first is to field a ready military force capable of winning the nation's wars--an interest that is enshrined in the current US National Security Strategy (NSS). That document also addresses the US vital interests concerning stability in the Mideast and a peace settlement for that region. The United States, President Clinton concluded in the NSS, has "enduring interests in pursuing a just, lasting, and comprehensive Middle East peace, ensuring the security and well being of Israel, helping our Arab friends provide for their security, and maintaining the free flow of oil at reasonable prices." [37] A rational assessment of these three interests is the key in determining the appropriate path for future US support of the MFO.

Defense Security Interest

Surprisingly, a large organization like the US military is affected by missions as relatively small as the MFO. These effects are manifested in an incremental increase in the overall operational tempo (OPTEMPO) and in the ability of the military to train its force. The 880 US military members committed to the MFO mission serve in the logistics battalion, the infantry battalion, and as part of the staff to the MFO. Members of the logistics battalion and MFO staff serve for one year in the MFO, while a new US infantry battalion rotates to the Sinai every six months. [38]

Missions such as the MFO reduce DOD's ability to deploy ready forces when needed for priority missions by the National Command Authority. Like the geopolitical environment, the US Army (the sole contributor of US forces) has also undergone considerable change. The Army (active and reserve) is one-third smaller than the force that existed in 1979, yet as a result of an active global engagement strategy, supports many more overseas missions. [39] The result of this change is an Army with considerably less flexibility and much greater OPTEMPO than the one that deployed Colonel Garrison and the 1-505 in March 1982. Some requirements of the MFO mission are not immediately obvious. For example, to maintain one infantry battalion in the Sinai in fact involves three infantry battalions: one in a four- to five-month training cycle preparing for deployment, the one actually in the Sinai, and one in a four- to six-month recovery period, retraining from the Sinai rotation. Additional requirements levied upon the parent headquarters in the battalion train-up and recovery missions are another significant facet. Complicating recovery from the Sinai duty is the fact, as many studies have demonstrated, that units retraining from a traditional peacekeeping mission need more time than those returning from a peace enforcement mission, due to the considerable difference in orientation and required skills between peacekeeping and warfighting. [40] Apart from the actual unit requirements, the need to maintain over 800 soldiers in the Sinai incrementally increases the pressures on the remainder of the force to support the inelastic missions already confronting the Army.

In addition to the increased OPTEMPO, support to the MFO also affects the Army's ability to train soldiers. There are, of course, some elements of the MFO--such as helicopter pilots, truck drivers, and explosive ordnance personnel--who receive outstanding individual training during their assignment. [41] For the supporting infantry battalion, however, training is severely diminished. General Maxwell Thurman in testimony before a House committee in 1993 characterized the problem bluntly:

The troops in the Sinai today--the battalion that's located there--are not conducting battalion-level activities. They're on stationary outposts, where 8 to 12 people are located. They're not doing the kind of duty that you'd want them to do if they were getting ready to go to war. . . . Soldiers must go through an extensive training regime to regain the level of operational proficiency that they held at the outset. [42]

These developments also have national policy implications as well. As a result of experiences in Bosnia and Somalia,

the Clinton Administration retreated from the policy of "aggressive multilateralism" in 1994 with the publication of Presidential Decision Directive 25 (PDD-25), *Reforming Multilateral Peace Operations*. US involvement in peace operations, that document emphasized, must be "selective, and . . . peace operations should not be open-ended." Moreover, the duration of peace operations should be "tied to clear objectives and realistic criteria for ending the operations." [43] While it is admittedly difficult to identify these aspects in the recent peace operations undertaken in Bosnia and Kosovo, that omission does not justify neglecting to attempt to apply this policy to an operation such as the MFO. The 17-year-old MFO mission falls well short of the objectives outlined in the presidential directive.

In this context, a failure to periodically consider peacekeeping operations such as the MFO using the carefully designed criteria of PDD-25 will result in a US military deployed piecemeal throughout the globe, unable to use decisive force when required. The increased operational demands occasioned by such deployments, the Army leadership recently pointed out, "are stretching the fabric of our Army." [44] It is a truism that with increasing frequency, the world looks to the United States to provide the vanguard of forces into hostile and complex environments. These worldwide obligations place a high premium on US forces and suggest their use should be reserved for only those situations requiring clear US leadership and the leverage provided by US technology. When circumstances allow, reducing force commitments to existing missions is one key method of ensuring that ready and trained forces will be available for these higher-priority missions. The possibility of a requirement for another MFO to be deployed on the Golan Heights in support of an Israeli-Syrian treaty lends additional importance to this review.

Stability and Security for Israel and Egypt

The security and stability of Israel and Egypt remain vital US interests. The MFO as presently constituted, however, is no longer necessary to guarantee their security and stability, given policy decisions ingrained at the highest levels in both Party nations. Further, given the strong US security guarantees consistently given to Israel, and to a lesser degree to Egypt, as well as the US prestige involved as the broker of the Camp David accords, it is inconceivable that any future Party nation administration could miscalculate the US response to a treaty violation.

The MFO was created to provide Egypt and Israel with a professional, impartial body to help administer the new peace treaty. This was necessary and proper in 1979 in light of both Parties' concerns over territorial security and sovereignty. But the world of 2000 is a far different place. Since the establishment of the MFO in 1982, there have been no substantive violations of the peace treaty by either Party. [45] It is possible that the MFO deterred violations during this period, but clearly the peace has been maintained primarily through the determination of both Egypt and Israel to abide by the treaty terms. Peacekeeping experts point to the consent of the concerned parties and their intent to abide by treaty terms as the single most important ingredient to long-term peace. [46] Seventeen years of strict adherence to the treaty provides a firm justification to support the belief that the basic regional geopolitical calculus has been fundamentally altered between Egypt and Israel, with the result that armed aggression is no longer considered a usable option. The presence of the MFO, while clearly essential during the early years, must be considered an independent factor in the maintenance of this policy by the Parties.

An advocate of the MFO's role as a stabilizing regional force might argue that absent the presence of the MFO to deter or report violations, there might be a return to the hostile conditions between the two states. A worst-case scenario would suggest a rogue leader coming to power within one of the Party nations. Or perhaps to satisfy an extremist faction, a leader might consider violating the terms of the treaty. [47] The obvious counter to any such actions, however, would be the knowledge that US reconnaissance assets would almost immediately detect changes in military force dispositions in ample time for strong preemptive action. The Sinai desert, with its open expanses, sparse vegetation, and generally clear skies, is ideally suited for overhead reconnaissance. As the primary sponsor of the Camp David talks, the United States almost certainly would not allow a treaty violation to go unchallenged and risk severe damage to its prestige and to the peace in the region.

Some suggest the US presence in the MFO provides a visible symbol of the US commitment to Israel's security. [48] In today's world, however, the physical presence of some 800 soldiers has been completely overshadowed by the unparalleled status of the US-Israeli security relationship. As described earlier, this relationship has grown since 1977 to the extent that in today's world US Presidents consistently express unqualified military support for Israel in the event her security is threatened. [49] A final factor deterring treaty violations is the risk of incalculable damage to the

relations that both Israel and Egypt have carefully built with the United States over the past 20 years.

Even apart from political realities, examined as an instrument to verify treaty compliance and ensure security, the MFO is no longer the best tool. The distinction between the capabilities of the Civilian Observer Unit and the military force units is significant. Although the COU numbers less than 30 personnel, by capitalizing on its ability to move throughout the Sinai it provides the majority of the confidence that the treaty is being observed. Conversely, in order for the infantry battalions to detect a treaty violation, violators must literally drive within binocular-range of the outposts in Zone C. It is an axiom of peacekeeping doctrine that "in cases where peacekeeping is achieving successful control, it may be reduced to an observer group."^[50] At a minimum, such a change is warranted at this point. US overhead reconnaissance working in combination with a small mobile force of observers operating throughout the Sinai could provide more reliable and economical reporting of possible treaty violations.

Comprehensive Peace Settlement

It is true that altering US support for the MFO at this particular juncture could deleteriously affect the US goal for a lasting peace in the Middle East. Israel has already achieved agreements with Jordan and Egypt. But full implementation of the 1998 Wye River Accords with the Palestinians is still problematical, and, most important, the US-brokered negotiations with Syria, although stymied in February 2000, will probably resume once Assad's successor is firmly installed. Significantly, Syria is the last country on Israel's borders with an army capable of engaging Israel. A Clinton Administration official recently characterized the benefits of a Syrian-Israeli treaty as potentially including the preemption of a potential alliance between Syria, Iraq, and Iran, while serving as a basis for a comprehensive peace in the Arab-Israeli conflict, stability on all of Israel's borders, isolation of Iraq, and increasing pressure for moderation on Iran.^[51] The obvious challenge in the Israeli-Syrian negotiations is to provide Israel with adequate security guarantees in exchange for relinquishing control of the Golan Heights.^[52] Maintaining the MFO in its current configuration during negotiations supports the goal of a lasting regional peace by publicly demonstrating US commitment to a previously concluded peace treaty and by providing a peacekeeping organization that might be called upon to supervise security measures on the Golan.

Transfer of the Golan Heights to Syria is a contentious, emotional issue for Israel. The heights dominate northern Israel and were the scene of hard-fought battles in the 1967 and 1973 wars. That it will be difficult for Prime Minister Barak to achieve internal support for a treaty with Syria is underscored by a poll showing that 90 percent of Israeli citizens believe the country should not relinquish the Golan.^[53] Given Israel's "constant need for reassurance" concerning its security, adding the variable of changing the MFO structure in the midst of the Syrian negotiations could jeopardize Prime Minister Barak's attempt to forge domestic support for a treaty.^[54]

Although the United Nations has maintained the UN Disengagement Force on the Golan since 1974, there is widespread speculation that Israel will demand the stationing of a "pseudo-MFO" peacekeeping force as a condition for turning over the Golan.^[55] Former Israeli Prime Minister Rabin has stated that he would use the MFO as a model for the Golan, and the Israeli Labor Party in general is believed to support this concept.^[56] Israel favors the MFO model for two reasons: it provides Israel much greater control as a "managing partner" of the peacekeeping organization than under the diffused supervision of UN peacekeeping, and the MFO is not subject to the vagaries of the UN in securing a renewal of its mandate.^[57] Given US enthusiasm concerning the achievement of a Syrian-Israeli peace treaty, it is difficult to envision a US President declining such a condition if it were key to the negotiations.

While the MFO could be shifted or expanded to cover the Golan, that would be unfortunate because the UN Disengagement Force is widely perceived to be a professional and successful peacekeeping organization.^[58] Given the expected adherence by Syria and Israel to the treaty terms, the Disengagement Force could be expected to continue to perform capably a role in which it has considerable experience and expertise. A realistic assessment of the situation must, however, consider the nearly inevitable inclusion of US peacekeepers in a US-brokered treaty. In any event, until the Golan peacekeeping issue is resolved it would be imprudent to enact sweeping change of the MFO.

Recommendations and Summary

Setting aside the relatively short-term requirement to support ongoing peace negotiations between Syria and Israel, it is clear that support to the MFO in its current configuration no longer best serves US national interests. Maintenance of

US forces in the Sinai strains an already overburdened military with a requirement that can be accomplished more effectively by other means. Peacekeeping operations are designed to monitor and facilitate implementation of existing truces or cease-fires and support diplomatic efforts to reach long-term political settlements.[59] The MFO reflected a wise departure from that doctrine. Because of the history of conflict between Arabs and Israelis, and given Israeli security concerns at the time, establishment of the MFO was appropriate to help forge trust. Twenty years later, to the credit of all concerned, the settlement has ultimately proved binding on the Parties. Several options are available to enact the change now appropriate given the global and regional situation: termination of the MFO mission, submission of the MFO mission to the UN for approval as a peacekeeping observer mission under the UN Truce Supervisory Organization, persuasion of the Parties to evolve the MFO into an observer force, or a combination of these approaches.

A critical analysis indicates that complete dissolution of the MFO should be the ultimate goal. In a mature Egyptian-Israeli relationship, the MFO is an anachronism. Dissolution of the MFO would signal to the world community that Israel and Egypt have taken the final step toward complete normalization of relations, and that conflict termination, if handled correctly, can lead to conflict resolution. There are, however, legitimate treaty restrictions still binding on both Parties that require the supervision of a disinterested third party. Until relations between Israel and Egypt progress to the stage where these restrictions are mutually agreed to be either unnecessary or "self-policed," some type of external treaty monitoring mechanism must be maintained.

To fulfill this requirement, it is appropriate to propose that the United Nations assume the MFO mission and pass the task to the UN Truce Supervisory Organization as an observer requirement. After all, the UN already has observers in the Sinai, an internationally recognized headquarters, and vast experience with peacekeeping between Israel and its Arab neighbors. UNTSO's presence in the Sinai could be expanded to cover this requirement. This option also would contribute to an increased international perception of the UN as the unquestioned leader in peacekeeping operations, which would add to its prestige and strength.[60] Unfortunately UNTSO, at least the headquarters, does not enjoy a high reputation within the Middle East. Israel in particular, probably because of its experiences with UNEF I and UNIFIL, has never favored UN or UNTSO supervision of the Sinai security arrangements and is likely to veto any such suggestion.[61] Israeli reluctance however, should not dissuade US policymakers from exploring this avenue. With some amount of agreed-upon reform within UNTSO, Israel might be persuaded to adopt this course of action.

While transfer to the United Nations is pursued, US efforts to influence the Parties to change the MFO structure to reflect political realities and efficiencies should commence on a parallel track. One change that could be made almost immediately (and be in keeping with current logistics support practices) is to contract out support, eliminating the 1st US Support Battalion.[62] The primary change that should be advanced, however, is to propose that the infantry battalions be returned to their providing countries and that all the MFO support structure, except for what is required to support a slightly larger Civilian Observer Unit, should be disestablished. The Civilian Observer Unit should be moderately expanded and diversified to include observers from countries other than the United States. The United States also should agree to place a small cell within the MFO force headquarters capable of receiving US national intelligence, including imagery. When appropriate, this cell could suggest to the Force Commander that Civilian Observer Unit inspectors be dispatched to certain locations to investigate suspected treaty infractions, without violating foreign disclosure requirements.

After nearly 20 years, it's time to make plans to adapt or terminate the US commitment to the Sinai to preserve American freedom of action for other more pressing requirements. Actually effecting such change will have to be postponed until current Israeli-Syrian negotiations play out. Substantive changes could be held in abeyance for a period of one year, which should be sufficient time to determine whether a treaty is possible. As these Syrian-Israeli talks progress, the United States would be well advised to apply the lessons learned from the MFO experience. Given the wise requirements of PDD-25, the United States should insist on three key points if the presence of US peacekeepers on the Golan is required to complete the settlement. The first is a "quid pro quo": in exchange for US peacekeepers on the Golan, the MFO in the Sinai should be severely reduced or transferred to the UN as an observer requirement. Second, the treaty protocol must include a mechanism for periodic review of Golan peacekeeping requirements, with the United States as a full partner in that evaluation. Third, because of the impact on the US military, a requirement to provide military "observers" rather than "forces" should be pursued. These three conditions would have the added benefit of signaling to the world that peacekeeping missions, especially those that are US-led,

are not permanent, and that nations should be prepared to operate in their eventual absence.

Finally, it is crucial to remember that the concerns of both Egypt and Israel must be fully addressed in deciding what changes should take place in the Sinai and for the MFO. Their continued support of peace is fundamental to the achievement of vital US national interests in the region.

NOTES

The author gratefully acknowledges the assistance of Dr. David Jablonsky, US Army War College; Major Tom Mahoney, Headquarters, Department of the Army; Mr. Robert Krantz, Department of State; and Colonel Larry Forster, US Army War College.

57. Sinai, p. 641

58. Mackinlay, pp. 5, 149. See also Sinai, p. 642, who states, "UNDOF is universally considered one of the UN's most effective peace-keeping operations."

59. On the criteria for traditional peacekeeping developed as a result of the experience of the Second United Nations Emergency Force (UNEF II), see UN Document S/11052/Rev, 27 October 1973; Brian Urquhart, "Beyond the Sherriffs' Posse," *Survival*, 36 (May/June 1990), 198; and Brian Urquhart, *A Life in Peace and War* (New York: Harper and Row, 1987), pp. 241-42.

60. See Houghton and Trinkka, p. 94, who concluded that "for the maintenance of prestige and strength of the UN, it is in the interest of the international community to continue to place primary reliance on the UN for peacekeeping operations in the world's trouble spots."

61. Tabor, p. 3. See also Allen, pp. xvi, 43. Allen shares Israel's perception of UNTSO and the UN: "UNTSO headquarters showed itself to be slow-moving, inflexible, hostile to constructive suggestions, and excessively bureaucratic." In referring to UN peacekeeping in general, Allen suggests "there can never be enough criticism of the UN bureaucracy," and that "to save the UN peacekeeping bureaucracy, it must be first destroyed."

62. Comments by Colonel Larry Forster, US Army War College faculty, former member MFO, April 2000.

Lieutenant Colonel (P) Thomas W. Spoehr is the Director, DTLOMS Integration Directorate, US Army Chemical School, Fort Leonard Wood, Missouri. At the time this article was written he was a student at the US Army War College. He earned a B.S. from the College of William and Mary, Williamsburg, Virginia, and an M.A. from Webster University in St. Louis. He previously commanded the 84th Chemical Battalion at Fort McClellan, Alabama, and served as an exercise planner at the US Space Command, Peterson Air Force Base, Colorado.
